Introduction

The clinical biomechanics program is increasingly relevant for professionals who use therapeutic options related to the forces of traction produced by orthodontic devices. Gaining in-depth knowledge in the fundamentals and magnitudes of the biomechanics of dental movements, give the dentist the tools with which to improve the oral health of their patients in a practical way.

“

Improve your knowledge through this program, where you will find the best didactic material with real clinical cases. Learn here about the latest advances in the speciality to be able to perform quality dental practice"

Clinical biomechanics is an area of study that allows dentists to achieve more precision in the design and implementation of dentistry in order to treat oral pathologies. The analysis of force systems, the control of tooth movement, the behavior of the materials used and the correlation between force systems and biological changes are the main elements of the study of clinical biomechanics.

Knowing the fundamentals and precisely controlling the effects it produces are two components that allow the dentist to optimally develop orthodontic-based treatment options.

This program is aimed at providing the professional with up-to-date knowledge of the main aspects of Advanced Clinical Biomechanics, in a practical way, 100% online, and adapted to their needs.

*Update your knowledge
through the Postgraduate
Certificate in Advanced Clinical
Biomechanics in a practical
way and adapted to your needs"*

This **Postgraduate Certificate in Advanced Clinical Biomechanics** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ Development of clinical cases presented by experts in early dentofacial orthopedics
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Latest innovations in diagnostic and therapeutic developments related to Advanced Clinical Biomechanics
- ♦ An algorithm-based interactive learning system for decision-making in the clinical situations presented throughout the course
- ♦ With special emphasis on evidence-based dentistry and research methodologies in dentistry
- ♦ All of this will be complemented by theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

This Postgraduate Certificate is the best investment you can make when selecting a refresher program, for two reasons: in addition to updating your knowledge in emergency pharmacology, you will obtain a qualification from TECH Technological University"

Forming part of the teaching staff is a group of professionals from the field of dentistry, who contribute their work experience to this course, as well as a group of renowned specialists, recognized by esteemed scientific communities.

The multimedia content developed with the latest educational technology will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive academic program to train in real situations.

The design of this program is based on Problem-Based Learning, whereby the dentist must try to solve the different professional practice situations that arise throughout the program. For this reason, you will be assisted by an innovative, interactive video system created by renowned and experienced experts in the field of radiology with extensive teaching experience.

This course allows training in simulated environments, which provide immersive learning programmed to train for real situations.

It includes clinical cases to bring the program's degree as close as possible to the reality of care in dentistry.

02 Objectives

The main objective of the program is the development of theoretical and practical learning, so that the dentist is able to master the latest principles in advanced treatments in conventional orthodontics in a practical and rigorous manner.

A close-up photograph of a dental procedure. A metal bracket is attached to a tooth, and a wire is being manipulated with a dental instrument. The tooth has a white outline marking. The background is a solid purple color.

“

This program will provide you with the skills to carry out your dentistry praxis with confidence and will help you to grow both personally and professionally”

General Objectives

- ♦ Gain up-to-date theoretical and practical knowledge in the different areas of orthodontics and dentofacial orthopedics through evidence-based dentistry
- ♦ Apply acquired knowledge and problem-solving skills to new or unfamiliar environments with a multidisciplinary approach within the health sciences context
- ♦ Transmit learning skills to students that will allow them to continue their specialization in an autonomous and self-directed manner, developing habits of excellence and quality in professional practice
- ♦ Ability to integrate knowledge and face the complexity of making judgments, while reflecting on the social and ethical responsibilities linked to the application of their knowledge and judgments
- ♦ Encourage the acquisition of technical skills and abilities, through a powerful audiovisual system, and the possibility of development through online simulation workshops and/or specific education
- ♦ Encourage professional stimulation through continuous education and research

Specific Objectives

- ♦ Know how to apply the retention protocols for different deformities, as well as the principles and mechanisms involved in physiological rebound and malocclusions recurrence
- ♦ Revise the principles of biomechanics applied to orthodontic and the morphofunctional fundamentals
- ♦ Update knowledge of bonding techniques for brackets and bands
- ♦ Classify the different types of microscrews
- ♦ Identify surgical aids to tooth movement, updating microperforation and corticotomy techniques

*Make the most of the opportunity
and take the step to get up to date
on the latest developments in
Advanced Clinical Biomechanics"*

03

Course Management

The teaching staff of this program includes highly regarded health professionals from the field of dentistry, who contribute the experience of their work to this training. In addition, renowned specialists, members of prestigious national and international scientific communities, are involved in designing and preparing the program.

“

*Learn about the latest advances in
Advanced Clinical Biomechanics
from leading professionals"*

Professors

Mr. Orozco Aparicio, Iñaki

- ♦ Degree in Dentistry from the University of Valencia
- ♦ Master's Degree in Orthodontics and Dentofacial Orthopedics from the University of Valencia
- ♦ Professor for the Master's Degree in Orthodontics and Dentofacial Orthopedics and Specialization Degree in Orthodontics, CEU Cardenal Herrera University
- ♦ Professor for the Degree in Dentistry Courses Orthodontics III and Orthodontics IV
- ♦ Collaborating Professor for the Master's Degree in Clinical Orthodontics at UAH

Structure and Content

The structure of the contents has been designed by a team of professionals knowledgeable about the implications of specialization in daily practice, aware of the current relevance of training in the principles of advanced treatments in conventional orthodontics, and who are committed to quality teaching through new educational technologies.

“

This Postgraduate Certificate in Advanced Clinical Biomechanics, contains the most complete and up-to-date scientific program on the market”

Module 1. Advanced Clinical Biomechanics

- 1.1. Biomechanics Applied to Orthodontics and Dentofacial Orthopedics
 - 1.1.1. Active Removable Plaques
 - 1.1.2. Functional Equipment
 - 1.1.2.1. Action Modes
 - 1.1.2.2. Orthopedic Action
 - 1.1.2.3. Dental Action
- 1.2. Bracket and Band Cementing Techniques
 - 1.2.1. Direct Cementing
 - 1.2.2. Indirect Cementing
 - 1.2.3. Indications and Limitations
- 1.3. Microscrews
 - 1.3.1. General Indications
 - 1.3.2. Limitations of Use
- 1.4. Surgical Aids to Tooth Movement
 - 1.4.1. Anatomy of the Periodontium
 - 1.4.2. Orthodontic Tooth Movement Physiology
 - 1.4.3. Why Teeth Move Faster
 - 1.4.4. Types of Surgical Aids

“

*A unique, key, and decisive
experience to boost your
professional development”*

05 Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the dentist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Dentists who follow this method not only grasp concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

The student will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 115,000 dentists with unprecedented success, in all specialties regardless of the workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

*Relearning will allow you to learn with less effort
and better performance, involving you more
in your training, developing a critical mindset,
defending arguments, and contrasting opinions: a
direct equation for success.*

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances, and to the forefront of medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

06 Certificate

The Postgraduate Certificate in Advanced Clinical Biomechanics guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Global University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork"

This program will allow you to obtain your **Postgraduate Certificate in Advanced Clinical Biomechanics** endorsed by **TECH Global University**, the world's largest online university.

TECH Global University is an official European University publicly recognized by the Government of Andorra ([official bulletin](#)). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

This **TECH Global University** title is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.
