Introduction

Oral health monitoring can begin soon after a baby is born, even when there is no dentition yet. The monitoring of human growth and development requires knowledgeable dental professionals to ensure that it occurs properly. This is the reason for the creation of this online program, taught by a large teaching team with extensive experience in this field, which will allow students to delve into the theories, concepts and the different factors that influence the development stage of the child through a high-level university education.

“

Thanks to this Postgraduate Certificate you will achieve in 2 months an intensive renewal of your knowledge in the dental development of the child"

Childhood is the stage of growth and development that determines the pathologies that will be more evident in adulthood. For this reason, control and follow-up by dental professionals are key. This is known by the specialists themselves, who are constantly seeking to update their knowledge in order to offer their patients the best care, making the necessary corrections and preventing future pathologies.

A program taught exclusively online, which will allow students to delve into the fundamentals of growth and development, as well as the different stages of dental development, the most notable anomalies and treatments used. All this, with multimedia material based on video summaries, interactive diagrams and essential readings, which will favor the consolidation of knowledge in a more visual and agile way.

Likewise, the simulations of practical cases presented by the experts who teach this program will be very useful, thanks to their direct application in the daily clinical practice. In this way, students will not only have an exhaustive syllabus, but will also have at their disposal different activities and exercises with which to achieve a more complete update.

A high-level program offered by TECH to dental professionals, who also want a flexible program that allows them to combine their personal and/or work responsibilities with an unparalleled degree. Students only need an electronic device to be able to view the content of this Postgraduate Certificate, whenever and wherever they wish. Without attendance or fixed schedules, students will have the freedom to distribute the course load according to their needs. An enriching academic experience according to the current times.

In addition, in order to raise the quality of the program to the maximum, the teaching staff of the program will include an internationally renowned figure in the field of Pediatric Dentistry, characterized not only by his long and extensive career, but also by his countless contributions to dental practice. The content of this Postgraduate Certificate includes more than an hour and a half of exclusive masterclasses divided into 10 videos, thanks to which the graduate will be able to delve into the techniques and procedures that have revolutionized this field with the help of one of its best professionals.

This **Postgraduate Certificate in Growth and Development in Pediatric Dentistry** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ Practical cases presented by experts in Dentistry
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

A Postgraduate Certificate with which you will delve into the primary dentition, mixed first and second stage and permanent dentition"

“

Having the support of a renowned figure in the field of Pediatric Dentistry with access to 10 exclusive masterclasses will allow you to learn about their strategies for success”

The program’s teaching staff includes professionals from the sector who contribute their work experience to this program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive knowledge programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.

With this Postgraduate Certificate you will get a renewal of your knowledge about growth and development in pediatric patients.

A program designed for professionals who want an exclusively online program that allows them to combine it with other areas of their life.

02

Objectives

The objective of the following program is to contribute to updating the knowledge of oral health professionals in their ability to provide comprehensive care to children and adolescent patients, regardless of their physical, intellectual, behavioral or sensory condition, as well as to provide educational care to parents and patients from birth to adolescence, improving their attitudes and behavior in relation to health and their quality of life in a motivating, collaborative and inclusive manner.

“

Get an update of your knowledge in a more agile way thanks to the multimedia content that makes up this Postgraduate Certificate”

General Objectives

- ◆ Update the professional's knowledge in the different areas covered by comprehensive dental care in pediatric patients from birth to 14 years of age, with data-based scientific evidence
- ◆ Promote work strategies based on a comprehensive approach to the patient and individualized attention to each child according to their age and medical, dental and emotional needs
- ◆ Encourage the acquisition of technical skills and abilities, through a powerful audiovisual system, and the possibility of development through online simulation workshops and/or specific training
- ◆ Encourage professional stimulation through continued specialization and research.
- ◆ Promote understanding of the integral and multidisciplinary nature of pediatric dentistry, the importance of orderly, systematized and ethical teamwork and the role of the dentist working with the pediatric population as a health educator for children and their families

Specific Objectives

- ◆ Recognize and differentiate primary, mixed first and second stage and permanent teeth, clinically and radiographically
- ◆ Describe the process a drug undergoes in a child's body from the time it is administered until it is excreted
- ◆ Identify differences in drug pharmacokinetics between children and adults and in childhood between different ages
- ◆ Review the main drugs used in pediatric dentistry
- ◆ Explain the importance of the general clinical and stomatological examination in the pediatric patient
- ◆ Recognize the need for systematic and careful collection of clinical data for an appropriate diagnosis

A Postgraduate Certificate in which you will be able to refresh your knowledge with a team of experts specialized in Pediatric Dentistry"

03

Course Management

The management and the extensive teaching team that make up this Postgraduate Certificate have been selected taking into account their extensive experience in pediatric dentistry, as well as in the delivery of high-level teaching. Their knowledge and the current activity of the teaching staff will be reflected in the syllabus that makes up this Postgraduate Certificate. Likewise, professionals who study this online program will have specialized teachers at their disposal who will answer any questions that may arise regarding the content of this course.

“

The teaching team that teaches this program shows you in the syllabus the most up-to-date content on pain control in minors"

International Guest Director

Professor Raman Bedi is the Chairman of the Global Child Dental Fund and was previously Chief Dental Officer in England, i.e. the most senior advisor on dentistry in each of the four UK governments and head of the dental profession.

Since 2012 Raman has been the founding chair of the oral health working group of the World Federation of Public Health Associations, which raises the importance of oral health issues affecting global public health. He is a practicing specialist, focusing exclusively on the comprehensive oral rehabilitation of young children. He was a consultant to the NHS in pediatric dentistry from 1991 to 2005 and is on the General Dental Council's list of specialists in pediatric dentistry and dental public health. He is a consultant to WHO on curriculum development in the field of patient safety and dentistry, and was co-chair of the World Expert Committee on the management and prevention of dental caries. Recently, he was asked by WHO to review dental services in Oman.

Raman served as head of dental public health at the Eastman Dental Institute at University College London and director of the National Centre for Transcultural Oral Health. He was also co-director of the World Health Organization Collaborating Centre at the Eastman Dental Institute. He is currently professor emeritus at King's College London. Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization”

At TECH we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gervas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the dentist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Dentists who follow this method not only grasp concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

The student will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 115,000 dentists with unprecedented success, in all specialties regardless of the workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances, and to the forefront of medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.
Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.

Certificate

The Postgraduate Certificate in Growth and Development in Pediatric Dentistry guarantees you, in addition to the most rigorous and updated training, access to a Postgraduate Certificate issued by TECH Technological University.

“

*Successfully complete this program
and receive your university degree
without travel or laborious paperwork”*

This **Postgraduate Certificate in Growth and Development in Pediatric Dentistry** contains the most complete and updated scientific program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: **Postgraduate Certificate in Growth and Development in Pediatric Dentistry**
Official N° of hours: **150 h.**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
