Introduction

Early Dentofacial Orthopedics is one of the most effective resources to achieve a healthy development of the facial bone structure. Diagnosis at an early age allows interventions to be carried out to resolve and prevent pathological situations in the dental layout and their consequences at a functional level. This program allows professionals to update their knowledge in a practical way and adapted to their needs.

“

Improve your knowledge through this program, where you will find the best didactic material with real clinical cases. Learn here about the latest advances in the speciality to be able to perform quality dental practice"

The best time for dentofacial orthopedics is between 4 and 12 years of age, when the bone structure is in the process of growing. However, there is nothing to stop treatment being started at a younger age if there is an obvious problem. Dentofacial orthopedics is therefore preferable in early childhood or pre-adolescence, because, at these stages, professional intervention to guide the correct growth of the face is very beneficial.

The early approach perfectly complements the results of conventional orthodontic treatment by simplifying prolonged orthodontic treatment and eliminating the need for jaw surgery in adulthood. In addition, it is essential for the patient to achieve proper aesthetics and a harmonious face.

This program is oriented to provide the professional with up-to-date knowledge of the main aspects of Early Dentofacial Orthopedics, in a practical way, 100% online, and adapted to their needs.

Update your knowledge through the Postgraduate Certificate in Early Dentofacial Orthopedics in a practical way and adapted to your needs"

This **Postgraduate Certificate in Early Dentofacial Orthopedics** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ Development of clinical cases presented by experts in early dentofacial orthopedics
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Diagnostic and therapeutic developments related to Early Dentofacial Orthopedics
- ♦ An algorithm-based interactive learning system for decision-making in the clinical situations presented throughout the course
- ♦ With special emphasis on evidence-based dentistry and research methodologies in dentistry
- ♦ All of this will be complemented by theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

“ *This Postgraduate Certificate may be the best investment you can make when selecting a refresher program, for two reasons: in addition to updating your knowledge in Early Dentofacial Orthopedics, you will obtain a Postgraduate Certificate issued by TECH Technological University*”

This course allows training in simulated environments, which provide immersive learning programmed to train for real situations.

It includes clinical cases to bring the program's degree as close as possible to the reality of care in dentistry.

Forming part of the teaching staff is a group of professionals in the world of Dentistry, who bring to this course their work experience, as well as a group of renowned specialists, recognised by esteemed scientific communities.

The multimedia content developed with the latest educational technology will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive training program to train in real situations.

The design of this program is based on Problem-Based Learning, whereby the dentist must try to solve the different professional practice situations that arise throughout the program. For this reason, you will be assisted by an innovative, interactive video system created by renowned and experienced experts in the field of radiology with extensive teaching experience.

02 Objectives

The main objective of the program is the development of theoretical and practical learning, so that the dentist is able to master the latest techniques in Orthodontics and Orthognathic Surgery in a practical and rigorous manner.

“

This program will provide you with the skills to carry out your dentistry praxis with confidence and will help you to grow both personally and professionally”

General Objectives

- ♦ Gain up-to-date theoretical and practical knowledge in the different areas of orthodontics and dentofacial orthopedics through evidence-based dentistry
- ♦ Know how to apply acquired knowledge and problem-solving skills in new or unfamiliar environments with a multidisciplinary approach within broader contexts related to health sciences
- ♦ Transmit learning skills to students that will allow them to continue their specialization in an autonomous and self-directed manner, developing habits of excellence and quality in professional practice
- ♦ Possess the ability to integrate knowledge and face the complexity of making judgments, while reflecting on the social and ethical responsibilities linked to the application of their knowledge and judgments
- ♦ Encourage the acquisition of technical skills and abilities, through a powerful audiovisual system, and the possibility of development through online simulation workshops and/or specific training
- ♦ Encourage professional stimulation through continuous education and research

Make the most of the opportunity and take the step to get up to date on the latest developments in Early Dentofacial Orthopedics"

Specific Objectives

- ♦ Know and understand the indications, contraindications, and limits of orthodontics, dentofacial orthopedics and orthognathic surgery
- ♦ Be able to identify and prevent or treat risk factors for patient relapse
- ♦ Determine appropriate interventions in early orthopedics and neuro-occlusal rehabilitation (ONR)
- ♦ Review the planas law of minimum vertical dimension and functional masticatory angle
- ♦ Establish the necessary actions for the implementation of therapeutics during the first year
- ♦ Differentiate between the characteristics of therapy in the first dentition and in the mixed dentition and second dentition
- ♦ Describe the treatments in deciduous and first phase mixed dentition
- ♦ Establish current evidence-based protocols, including indications and contraindications at different treatment ages
- ♦ Gain up-to-date knowledge of the consequences of pathological situations of overbite, posterior crossbite and transversal problems
- ♦ Gain up-to-date knowledge of the diagnostic and therapeutic processes of facial asymmetry in children
- ♦ Describe the alterations in the eruption of canines, incisors, premolars and molars
- ♦ Gain up-to-date knowledge of the diagnostic and therapeutic approach to space problems and serial extraction

03

Course Management

The teaching staff of this program includes highly regarded health professionals from the field of dentistry, who contribute the experience of their work to this training. In addition, renowned specialists, members of prestigious national and international scientific communities, are involved in designing and preparing the program.

05 Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gervas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the dentist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Dentists who follow this method not only grasp concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

The student will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 115,000 dentists with unprecedented success, in all specialties regardless of the workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

*Relearning will allow you to learn with less effort
and better performance, involving you more
in your training, developing a critical mindset,
defending arguments, and contrasting opinions: a
direct equation for success.*

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances, and to the forefront of medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

06 Certificate

The Postgraduate Certificate in Early Dentofacial Orthopedics guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Postgraduate Certificate in Early Dentofacial Orthopedics** contains the most complete and up-to-date scientific program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The certificate issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor markets, competitive examinations and professional career evaluation committees.
