Introduction

Poor oral health can lead to periodontal disease, tooth loss or problems with other important organs. That is why the correct habits instilled from an early age will be key in preventing the appearance of pathologies such as caries. This 100% online program arises from the need for dental professionals to update their knowledge in this field. All this, through a syllabus made up of multimedia resources provided by a specialized teaching team with extensive professional experience in Pediatric Dentistry.

“

With your computer or tablet, you will be able to study a program that will provide you with the up-to-date knowledge you were looking for”

Awareness of oral hygiene is essential for the correct development of children, avoiding the appearance of pathologies such as caries or different complications that affect their general health. The information provided by the dental professional in this regard is key in their educational work, which complements the extensive knowledge in this field. This Postgraduate Certificate offers the professional a comprehensive agenda that will serve to recycle the knowledge acquired on preventive pediatric dentistry and dental caries.

A university program in which the student will learn, over a period of two months, about the oral health of children, anticipatory parental guidance, dental plaque control, dietary and nutritional measures, the use of fluorides and their proper prescription or dentistry in infants. All this, through video summaries, interactive diagrams, essential readings and clinical cases provided by a specialized teaching team.

In addition, the dental professional will have the opportunity to renew their knowledge in the maintenance of the oral health of the child and the periodic control that the professional must carry out to ensure that the patient has a good hygiene and health.

It is, therefore, an excellent opportunity offered by TECH to dental professionals who wish to study a quality program comfortably. You only need an electronic device (computer, tablet or cell phone) to access the complete syllabus and thus distribute the teaching load according to your needs. In addition, the Relearning system, used in this academic institution in all its programs, allows students to progress in a more natural and agile way, while reducing the long hours of study. A tremendously useful teaching modality for those who wish to combine their professional and/or work responsibilities with a high-level university program.

And, as if that were not enough, the program content includes 10 exclusive masterclasses of 10 minutes each prepared by a guest director, a leading figure in the field of pediatric dentistry who, after a long and extensive career, has managed to position himself among the best professionals in the world for a practice of the highest level. Therefore, in a multidisciplinary manner and with the support of a benchmark, the graduate will be able to update their practice based on successful strategies and delve into their own contributions to the field of pediatric care.

This **Postgraduate Certificate in Preventive Pediatric Dentistry and Dental Caries** contains the most complete and up-to-date scientific program on the market. Its most notable features are:

- ♦ Practical cases presented by experts in Dentistry
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

You have at your disposal, 24 hours a day, the most recent syllabus in preventive pediatric dentistry"

“

A university program that will allow you to select the complementary tests for the correct diagnosis of the alterations in pediatric patients"

The program's teaching staff includes professionals from the sector who contribute their work experience to this program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive knowledge programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.

A 100% online program designed for professionals who wish to achieve an update compatible with other areas of their life.

Access the latest content on dentin structure alterations and their treatment.

02

Objectives

At the end of the 100 teaching hours that make up this Postgraduate Certificate, the dental professional will have achieved a renewal of their knowledge through a syllabus that has a theoretical-practical approach. An update that will have allowed them to delve into the various methods of prevention of dental caries and its application in different ages, the selection criteria of complementary tests or the implementation of prevention and maintenance plans appropriate for each patient.

“

This refresher program will generate a sense of confidence in the performance of the dentist's practice"

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

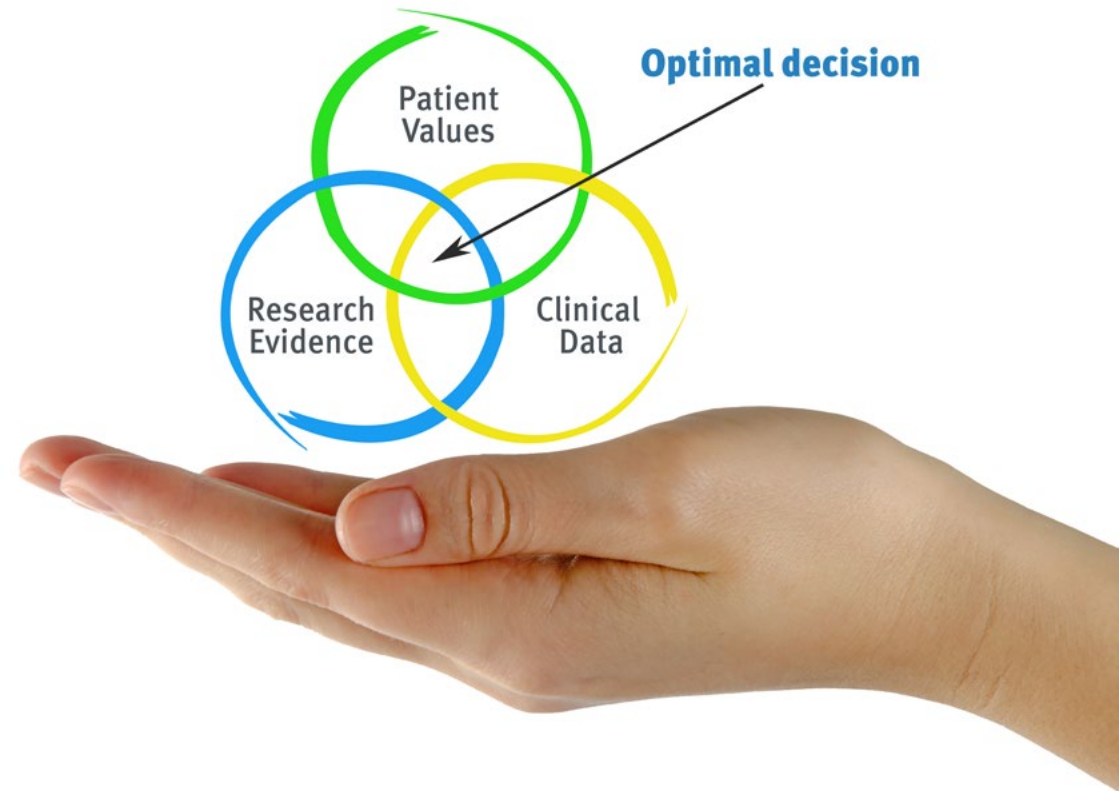

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the dentist's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Dentists who follow this method not only grasp concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

The student will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 115,000 dentists with unprecedented success, in all specialties regardless of the workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances, and to the forefront of medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.

Certificate

The Postgraduate Certificate in Preventive Pediatric Dentistry and Dental Caries guarantees you, in addition to the most rigorous and updated training, access to a Postgraduate Certificate issued by TECH Technological University.

“

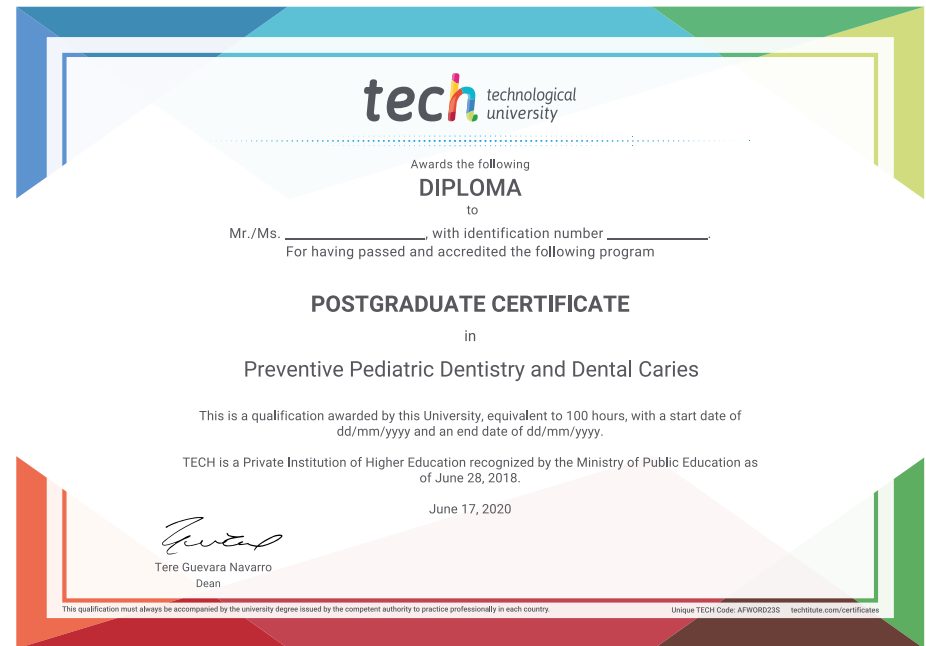

*Successfully complete this program
and receive your university degree
without travel or laborious paperwork”*

This **Postgraduate Certificate in Preventive Pediatric Dentistry and Dental Caries** contains the most complete and updated scientific program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: **Postgraduate Certificate in Preventive Pediatric Dentistry and Dental Caries**
Official N° of hours: **100 h.**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
