Introduction

Teaching has been evolving over the years in favor of innovation and implementation of new strategies to put into practice with students. Therefore, Coaching is allowing educators to learn a great variety of dynamics and quality tools that will bring about change and personal development in children, families and teachers. A change that is closely linked to emotions, which are a fundamental axis of much of life; and for which it is also very important to have knowledge in Emotional Intelligence. This discipline has emerged independently with a theoretical body based on neuroscience and a wide field of application, including social and school relationships.

“

Teachers must update their competencies and skills in Coaching and Emotional Intelligence to advance in their profession. In this Advanced Master's Degree we give you the keys to these innovative techniques"

This Advanced Master's Degree stands out above the rest, not only for the experience of its teachers and the quality of its content, but for covering all areas of Coaching and emotional intelligence in the academic world: from formal to non-formal education, taking into account the different evolutionary stages of the student.

The program can be divided into two main blocks: Coaching and emotional intelligence. In the case of educational Coaching, its excellent teaching program integrates uncommon disciplines such as neurolinguistic programming, neuroscience or Mindfulness, which are approached as perfectly complementary and compatible tools with a coaching process at an individual and group level. In addition, it delves into the figure of the teacher and the family, as well as the psycho-evolutionary and educational characteristics of children and adolescents during their development, through the use of practical and educational multimedia content. This will allow the future coach to quickly assimilate new tools and skills to apply in the daily practice of his profession.

In the field of emotional intelligence for teachers, a broad and comprehensive vision of this complex world is offered from an applied perspective, starting from the theoretical and biological bases, and including the different practical approaches, so that professionals know what emotional intelligence is, how to assess and interpret it and, above all, how to apply it to their jobs.

Thanks to the participation of several educational psychologists in the development of contents, this program offers a holistic vision of Coaching, with which to provide value to special groups. It will also provide the educator with the necessary skills to manage some of the major challenges of today's society, such as Bullying or the impact of social networks on minors. In addition, it deals with socially relevant topics such as the application of emotional intelligence to solve the main demands of parents, teachers or business leaders.

This **Advanced Master's Degree in Educational Coaching and Emotional Intelligence** contains the most complete and up-to-date educational program on the market. The most important features include:

- ♦ The latest technology in e-learning software
- ♦ Intensely visual teaching system, supported by graphic and schematic contents that are easy to assimilate and understand
- ♦ Practical case studies presented by practising experts
- ♦ State-of-the-art interactive video systems
- ♦ Teaching supported by telepractice
- ♦ Continuous updating and recycling systems
- ♦ Self-regulated learning: full compatibility with other occupations
- ♦ Practical exercises for self-assessment and learning verification
- ♦ Support groups and educational synergies: Questions to the expert, discussion forums and knowledge
- ♦ Communication with the teacher and individual reflection work
- ♦ Content that is accessible from any fixed or portable device with an Internet connection
- ♦ Supplementary documentation databases are permanently available, even after the program

A high level scientific educational program, supported by advanced technological development and the teaching experience of the best professionals"

“

An educational program created for professionals who aspire to excellence that will allow you to acquire new skills and strategies in a smooth and effective way"

Our teaching staff is made up of working professionals. In this way, TECH ensures that it delivers the intended educational update objective. A multidisciplinary team of qualified and experienced professionals in different environments, who will develop the theoretical knowledge efficiently, but, above all, will put at the service of the specialization the practical knowledge derived from their own experience: one of the differential qualities of this Advanced Master's Degree.

This command of the subject is complemented by the effectiveness of the methodological design of this Advanced Master's Degree. Developed by a multidisciplinary team of e-Learning experts, it integrates the latest advances in educational technology. In this way, you will be able to study with a range of comfortable and versatile multimedia tools, which will give you the operability you need in your specialization.

The design of this program is based on Problem-Based Learning: an approach that views learning as a highly practical process. To achieve this remotely, we will use telepractice. With the help of an innovative interactive video system and Learning from an Expert, you will be able to acquire the knowledge as if you were facing the scenario you are currently learning. A concept that will allow you to integrate and fix learning in a more realistic and permanent way.

A complete and thorough immersion in the strategies and approaches in Educational Coaching and Emotional Intelligence.

The quality of a program designed to prepare the best teachers available to you, in a unique opportunity for growth.

02

Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.

It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our University is the first in the world to combine case studies with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video
