# Introduction

This Postgraduate Certificate in Integration of the Educational Project in the Center introduces you, in the first module, to the first phase of the action plan: the holistic analysis of the situation.

An educational project cannot be programmed or implemented without first analyzing the concrete and real situation of the educational center where it will be implemented, or of the families and students for whom it is intended. This holistic analysis is extremely necessary for the project to have a chance of success and acceptance among all the parties involved in the implementation process.

“

*This Postgraduate Certificate in Integration of the Educational Project in the Center will generate a sense of confidence in the performance of your profession, which will help you to grow personally and professionally"*

Therefore, we will analyze all the factors to be taken into account in a complete analysis of the situation. These are: social analysis, psychological analysis, cultural analysis, technological analysis, ethical analysis, business analysis, analysis of the goals and objectives of the center, analysis of students and family context, analysis of educational agents, and SWOT analysis.

After the holistic analysis phase of the situation, and the study of all the areas that must be taken into account when programming an educational project, in this sixth module we enter into one of the points that is usually forgotten in other academic plans, but that real and professional experience in the implementation of educational projects has shown that it is one of the most important areas and that the success of the action plan depends a lot on it.

In view of this, we will analyze the phase of integration of the educational project in the center. A project is not simply planted in the school, but must take root by integrating itself into the whole structure that already exists in the school, and taking into account the moments and factors of particular relevance for it.

Thus, we will begin by studying the applicable regulatory framework on which the adaptation of the educational project depends. Next, we will examine several of the possible areas or plans of the center that must be taken into account, as they have an influence on the integration of the educational project in the center. We will go deeper into the tutorial action plan, the truancy plan, the plan of attention to educational inclusion, the coexistence and equality plan, the transition plan between stages, the reading promotion plan, the school welcome plan, the internal rules and regulations, and we will conclude with a series of projects to be taken into account in this integration.

This program makes professionals in this field increase their capacity for success, which results in a better praxis and performance that will have a direct impact on the educational treatment, on the improvement of the educational system and on the social benefit for the whole community.

This **Postgraduate Certificate in Integration of the Educational Project in the Center** contains the most complete and up-to-date program on the market. Its most notable features are:

- ♦ Development of case studies presented by experts in teaching, educational innovation, school management and marketing for teachers
- ♦ The graphic, schematic, and practical contents with which they are created provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ News on school management and educational innovation
- ♦ It contains practical exercises where the self-assessment process can be carried out to improve learning
- ♦ With special emphasis on innovative methodologies in school management and educational innovation. All this will be complemented with theoretical lessons, questions to the expert, discussion forums on controversial issues and individual reflection work
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

*Update your knowledge through the Postgraduate Certificate program in Integration of the Educational Project in the Center"*

“ *This Postgraduate Certificate may be the best investment you can make when selecting a refresher program for two reasons: in addition to updating your knowledge in Integration of the Educational Project in the Center, you will obtain a Postgraduate Certificate from TECH Technological University”*

It includes in its teaching staff professionals belonging to the field of integration of the educational project in the center, who pour into this program the experience of their work, in addition to recognized specialists belonging to reference societies and prestigious universities.

The multimedia content developed with the latest educational technology will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive program to learn in real situations.

This program is designed around Problem-Based Learning, whereby the educators must try to solve the different professional practice situations that arise throughout the Postgraduate Certificate. For this purpose, the educator will be assisted by an innovative interactive video system developed by recognized experts in the field of integration of the educational project in the center and with great teaching experience.

*Increase your decision-making confidence by updating your knowledge through this Postgraduate Certificate.*

*Take the opportunity to learn about the latest advances in the Integration of the Educational Project in the Center and improve the attention to your students.*

# Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

*Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"*

## At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

*With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.*

*It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.*

“

*Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”*

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

## Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our University is the first in the world to combine case studies with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

*Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.*

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

*Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.*

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

#### Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

#### Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, with the latest educational advances, and to the forefront of Education. All this, first-hand, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, you can watch them as many times as you want.

#### Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive multimedia content presentation training Exclusive system was awarded by Microsoft as a "European Success Story".

#### Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

**Expert-Led Case Studies and Case Analysis**

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

**Testing & Retesting**

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises: so that they can see how they are achieving your goals.

**Classes**

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

**Quick Action Guides**

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
