Introduction

A high percentage of the world's population professes faith in Christianity and this figure is growing steadily, which means that the demand for teachers specialized in the teaching of this religion is increasingly high. Furthermore, taking into account that the Bible has been ranked as the most read book, and at the same time, the least understood in the history of literature, it is essential for the teacher to understand it in depth and know how to interpret it in order to transmit this knowledge to students in different educational stages. In this context, this TECH program was created in which, during 6 months of 100% online education, the teacher will complete a comprehensive study of the phenomenology of the Christian religion, taking into account the Bible and its context, as well as the teachings of the Old Testament, among other issues. All of this condensed into 450 hours of totally flexible learning, so that the student can decide when and where to study, without having to adapt to a pre-set schedule.

“

This program is the best investment you can make to improve your knowledge of Biblical Foundations of Teaching Catholic Religion and improve your confidence in delivering religion classes”

The Postgraduate Diploma in Biblical Foundations of Teaching Catholic Religion has been created to educate professionals, instilling in them specific knowledge based on Catholic doctrine. In a world where Catholic Education is a fundamental requirement of education due to the high demand of students who request it, it is essential to receive efficient education such as the one offered by this program. Being a teacher of Catholic Religion requires specific preparation, since mere knowledge or belief is not enough. It implies an important responsibility that requires specific skills to convey the information to your students in a precise way and to make their interest grow. It is imperative to receive well founded teachings, rich in reliable knowledge and explained in depth.

Therefore, the professional is required to constantly improve their competencies and skills when transmitting the word of God to their own students. These skills are achieved through a complete program that presents theoretical and audiovisual content to reinforce not only the concepts, but the way in which they can be disseminated for greater transcendence. The syllabus chosen by TECH includes a first part focused on the philosophical and phenomenological knowledge of religion, in order to establish the foundations of the specific knowledge surrounding Catholicism. The second module will expand knowledge of the Bible, its context and how to understand the valuable information it contains, taking into account its cultural and historical environment, as well as the elements surrounding its configuration. Finally, the Old Testament will be reviewed in depth, giving perspective and understanding to the teachings of the Catholic Church Fathers. For this reason, this program is the best investment a teacher can make in order to be educated in an area that is as vocational as it is intellectual.

Precisely for all of the above, TECH has designed this Postgraduate Diploma with an effective, simple and efficient methodology that leads the graduate to specialize and become an elite professional in Catholic Education through the latest educational technology 100% online. Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.

It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method.

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the Harvard case method with the best 100% online teaching methodology available: Relearning.

Our University is the first in the world to combine case studies with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, with the latest educational advances, and to the forefront of Education. All this, first-hand, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive multimedia content presentation training Exclusive system was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises: so that they can see how they are achieving your goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.
Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
