Introduction

Awakening curiosity, stimulating attention and ultimately improving student learning is effectively achieved by taking emotional intelligence into account. In recent years, the benefits of classroom activities, where this concept has been applied, have been widely accepted. Therefore, teaching goes beyond mastering a subject and now the professional handles all kinds of teaching tools and strategies that contribute to the personal development of their students. In order to promote the growth of teachers, this program has been created, which delves into emotions, educational coaching or the role of families in the emotional education of their children. All this will be possible thanks to teaching material, which has the most current information in this field, prepared by specialists in Neurosciences or Psychopedagogy.

“

Thanks to this Professional Master's Degree you will enrich and enhance the intelligence of your students. Enroll now”

In recent years, the educational field has understood that beyond preparing children and adolescents to find a job in accordance with their abilities and aspirations, it is necessary to work on other aspects that have been less valued until now, such as the ability to express, understand and manage emotions. This undoubtedly not only favors the future adult, but also favors a better development of the person in the different stages of their lives, where they must face different situations, not always easy to face.

Teachers who teach their subject to children or adolescents have different techniques and teaching actions aimed at enhancing emotional intelligence, regardless of the subject they teach. Greater knowledge of the brain itself, thanks to scientific research, as well as studies that delve into social behavior, have prompted the inclusion of actions focused not only on favoring the student, but also the teacher themselves.

This Professional Master's Degree provides the teaching professional with an exhaustive syllabus with a theoretical-practical orientation that will allow them to acquire advanced knowledge about emotional intelligence in childhood, the different theories and models that explain the development of this concept, as well as its application at different educational levels. The case studies provided by the specialized teaching team that teaches this program will bring the graduate even closer to situations that they will be able to implement in their classes.

In addition to obtaining up-to-date knowledge, the teacher is faced with a program prepared in a convenient, flexible format and taught exclusively online. All that is needed is a computer, tablet or cell phone to access the syllabus whenever the student wishes. In addition, the Relearning system, which TECH uses in all its programs, will allow a much more natural and agile progression throughout the 12 months of this university program. The professional is, therefore, facing an excellent opportunity to progress in their field of work with a program that is at the academic forefront.

This **Professional Master's Degree in Emotional Intelligence** contains the most complete and up-to-date educational program on the market. The most important features include:

Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH Education School we use the Case Method

In a given situation, what should a professional do? Throughout the program students will be presented with multiple simulated cases based on real situations, where they will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method.

With TECH, educators can experience a learning methodology that is shaking the foundations of traditional universities around the world.

It is a technique that develops critical skills and prepares educators to make decisions, defend their arguments, and contrast opinions.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Educators who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process is solidly focused on practical skills that allow educators to better integrate the knowledge into daily practice.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life teaching.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our University is the first in the world to combine case studies with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

Educators will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 85,000 educators with unprecedented success in all specialties. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialist educators who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Educational Techniques and Procedures on Video

TECH introduces students to the latest techniques, with the latest educational advances, and to the forefront of Education. All this, first-hand, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive multimedia content presentation training Exclusive system was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises: so that they can see how they are achieving your goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
