01

Introduction

Renewable Energies are undoubtedly on the rise and increasingly this market requires specialized professionals who know how to manage them and choose those that are best in each case. Aware of this, TECH professionals have designed this very complete program the main objective of which is to provide engineers with professional expertise and knowledge on the latest technologies available in the field of Renewable Energies, with special emphasis on digital transformation in this regard. Likewise, during the program, IoT projects integrated in Renewable Energy Systems, and the new forms of energy commercialization through *Blockchain* technology will be detailed.

“

Renewable energies are on their way to a digital transformation. Learn with this TECH Postgraduate Certificate all its novelties"

The Renewable Energy sector is in full international expansion and is increasingly demanding engineers specialized in this field. Therefore, the best professionals in the sector have designed for TECH this complete Postgraduate Certificate that aims to provide professionals with strong knowledge in everything that encompasses the Renewable Energy sector, specifically in the aspect of digital transformation, to increase their working position in today's energy market.

Specifically, this Postgraduate Certificate will focus on defining what digital transformation entails and its integration with new technologies in all areas of a company or industry to change the way it operates.

The aim is to optimize processes, improve competitiveness and offer new added value to customers. Many application techniques that today seem futuristic, are already being applied with great results in the industrial sector, the Renewable Energies sector being an optimal environment for this.

This Postgraduate Certificate will analyze and examine the integration of these new technologies to Renewable Energy systems, from how they are applied to the technology itself and its processes to management, operation and maintenance activities.

Finally, IoT projects integrated into renewable energy systems and new forms of energy trading through *Blockchain* technology will be detailed.

For all these reasons, this Postgraduate Certificate in Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems integrates the most complete and innovative educational program in the current market in terms of knowledge and the latest available technologies, in addition to encompassing all sectors or parties involved in this field. In addition, the Postgraduate Certificate is made up of exercises based on real cases of situations currently managed or previously faced by the teaching team.

This **Postgraduate Certificate in Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems** contains the most complete and up-to-date educational program on the market. The most important features of the program include:

- ◆ Practical case studies presented by experts
- ◆ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional development.
- ◆ Practical exercises where self-assessment can be used to improve learning
- ◆ Its special emphasis on innovative methodologies
- ◆ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

“*Improving your skills in Renewable Energies will give you a boost to your professional career, with greater intervention capacity and better results*”

“

Learn with this Postgraduate Certificate how the digital transformation for the energy system is advancing and bring new competencies to your professional profile"

The program's teaching staff includes professionals from sector who contribute their work experience to this training program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive training programmed to train in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the professional will be assisted by an innovative interactive video system created by renowned and experienced engineering experts.

You will have innovative didactic materials and resources that will facilitate the learning process and the retention of the contents learned for a longer period of time.

A 100% online education that will allow you to combine your studies with the rest of your daily activities.

02

Objectives

TECH has designed this very complete Postgraduate Certificate with the aim of training engineering professionals to be able to design, implement and work on energy projects, knowing in depth everything related to the industry and digital advances that are making a significant transformation in the systems, as well as the aspects of sustainability and climate change in the international arena that directly affect it. To this end, specific aspects will be addressed that stand out for their enormous importance in today's business landscape, and for which large corporations are increasingly demanding competent engineers with a solid specialized education.

“

With this program, TECH has only one goal: to help you grow in your profession and become a prestigious engineer”

General Objectives

- ◆ Conduct an exhaustive analysis of current legislation and the energy system, from electricity generation to the consumption phase, as well as the fundamental production factor in the economic system and the functioning of the different energy markets
- ◆ Identify the different phases required for the feasibility and implementation of a Renewable Energy project and its commissioning
- ◆ Analyze in depth the different technologies and manufacturers available to create systems for the exploitation of Renewable Energies, and distinguish and critically select those qualities according to costs and actual application
- ◆ Identify the operation and maintenance tasks required for the correct operation of Renewable Energy installations
- ◆ Size facilities for the application of all energy sources of lesser implementation such as mini-hydro, geothermal, tidal and clean vectors
- ◆ Manage and analyze relevant bibliography on a topic related to one or some of the fields of Renewable Energies, published both nationally and internationally
- ◆ Adequately interpret society's expectations on the environment and climate change, and engage in technical discussions and critical opinions on energy aspects of sustainable development, as skills that Renewable Energy professionals should have
- ◆ Integrate knowledge and face the complexity of formulating reasoned judgments in the field applicable to a company in the Renewable Energy sector
- ◆ Master the different existing solutions or methodologies for the same problem or phenomenon related to Renewable Energies and develop a critical spirit knowing the practical limitations

Specific Objectives

- ◆ Optimize processes, both in production and in Operations and Maintenance
- ◆ Learn in detail about the capabilities of digital industrialization and automation in Renewable Energy installations
- ◆ Gain in-depth knowledge and analyze the different alternatives and technologies offered by digital transformation
- ◆ Implement and test IoT (IoT) systems
- ◆ Use tools such as Big Data to improve processes and/or energy facilities
- ◆ Gain in-depth knowledge of the scope of drones and autonomous vehicles in preventive maintenance
- ◆ Learn new forms of energy commercialization *Blockchain* and Smart Contracts

A training program designed through practical cases that will teach you how to act in real situation in daily practice in your profession”

03

Course Management

TECH applies a criterion based on high quality in all its training. This guarantees students that by studying here they will find the best didactic content taught by the best professionals in the sector. In this sense, this Postgraduate Certificate in Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems has highly prestigious professionals within this area, who pour into the education the experience of their years of work, as well as the knowledge acquired from research in the field. All to provide the engineer with a high-level program, which will enable them to practice in national and international environments with greater guarantees of success.

“

Learn with the best and acquire the knowledge and skills you need to intervene in this area of development with total success"

Guest Director

De la Cruz Torres, José

- ◆ Degree in Physics and Industrial Electronics Engineering, University of Seville
- ◆ Master's Degree in Operations Management by EADA Business School Barcelona
- ◆ Master's Degree in Industrial Maintenance Engineering, University of Huelva
- ◆ Railway Engineering, UNED
- ◆ South head of the appraisal, assessment and valuation of technologies and processes of Renewable Energy generation facilities at RTS International Loss Adjusters

Codirector

Lillo Moreno, Javier

- ◆ Telecommunications Engineer, University of Seville
- ◆ Master's Degree in Project Management and Master's Degree in Big Data & Business Analytics, School of Industrial Organization (EOI)
- ◆ With an extensive professional career in the Renewable Energy sector of more than 15 years
- ◆ Has managed the O&M areas of several companies with high visibility in the sector

Professors

Dr Gutiérrez, María Delia

- ◆ Vice President of Operations at the Tecnológico de Monterrey
- ◆ Professional Master's Degree in Environmental Systems at Tecnológico de Monterrey
- ◆ PhD in Engineering Science with a major in Energy and Environment from Dartmouth College
- ◆ Professor of Climate Change and Energy Use and Ecological Processes for Human Development at Tec de Monterrey.

Dr. De la Cal Herrera, José Antonio

- ◆ CEO and founding partner of Bioliza Estrategias en Biomasa
- ◆ Industrial Engineer, Polytechnical University of Madrid
- ◆ MBA in Business Administration and Management from the Higher School of Commercial and Marketing Management, ESIC
- ◆ PhD from the University of Jaén
- ◆ Former Head of the Renewable Energy Department of AGECAM, S.A., Energy Management Agency of Castilla-La Mancha
- ◆ Associate Professor in the Department of Business Organization, University of Jaén

Montoto Rojo, Antonio

- ◆ Electronics Engineer, University of Seville
- ◆ MBA at Camilo José Cela University
- ◆ Account Manager for storage systems at Gamesa Electric

04

Structure and Content

The syllabus of the Postgraduate Certificate is configured as a complete tour through each and every one of the elements required to understand and assume the ways of working in this field. Thus, through an innovative didactic approach, based on the practical application of the contents, the engineer will learn and understand the operation of the energy transformation, knowing how to design and implement projects that provide high levels of safety and services to companies. This, in addition to adding value to your professional profile, will make you a much better prepared professional to work in a variety of environments.

“

A comprehensive syllabus focused on acquiring knowledge and converting it into real skills, created to propel you to excellence"

Module 1. Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems

- 1.1. Current Situation and Outlook
 - 1.1.1. Current Status of Technologies
 - 1.1.2. Trend and Evolution
 - 1.1.3. Challenges and Future Opportunities
- 1.2. Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems
 - 1.2.1. The Era of Digital Transformation
 - 1.2.2. The Digitization of the Industry
 - 1.2.3. 5G Technology
- 1.3. Automation and Connectivity: Industry 4.0
 - 1.3.1. Automated Systems
 - 1.3.2. Connectivity
 - 1.3.3. The Importance of the Human Factor Key Factor
- 1.4. Lean Management 4.0
 - 1.4.1. Lean Management 4.0
 - 1.4.2. Benefits of Lean Management in Industry
 - 1.4.3. Lean Tools in Renewable Energy Facility Management
- 1.5. Mass Catchment Systems. IoT
 - 1.5.1. Sensors and Actuators
 - 1.5.2. Continuous Data Monitoring
 - 1.5.3. Big Data
 - 1.5.4. SCADA Systems
- 1.6. IoT Project Applied to Renewable Energies
 - 1.6.1. Structure of the Monitoring System
 - 1.6.2. IoT System Architecture
 - 1.6.3. Cases Applied to IoT
- 1.7. Big Data and Renewable Energies
 - 1.7.1. The Principles of Big Data
 - 1.7.2. Big Data Tools
 - 1.7.3. Usability in the Energy and REE Sector

- 1.8. Proactive or Predictive Maintenance
 - 1.8.1. Predictive Maintenance and Fault Diagnosis
 - 1.8.2. Instrumentation: Vibrations, Thermography, Damage Analysis and Diagnosis Techniques
 - 1.8.3. Predictive Models
- 1.9. Drones and Automated Vehicles
 - 1.9.1. Main Characteristics
 - 1.9.2. Uses of Drones
 - 1.9.3. Uses of Autonomous Vehicles
- 1.10. New Forms of Energy Commercialization. Blockchain and Smart Contracts
 - 1.10.1. Information Systems Using Blockchain
 - 1.10.2. Tokens and Smart Contracts
 - 1.10.3. Present and Future Applications for the Electrical Sector
 - 1.10.4. Available Platforms and Blockchain-Based Application Cases

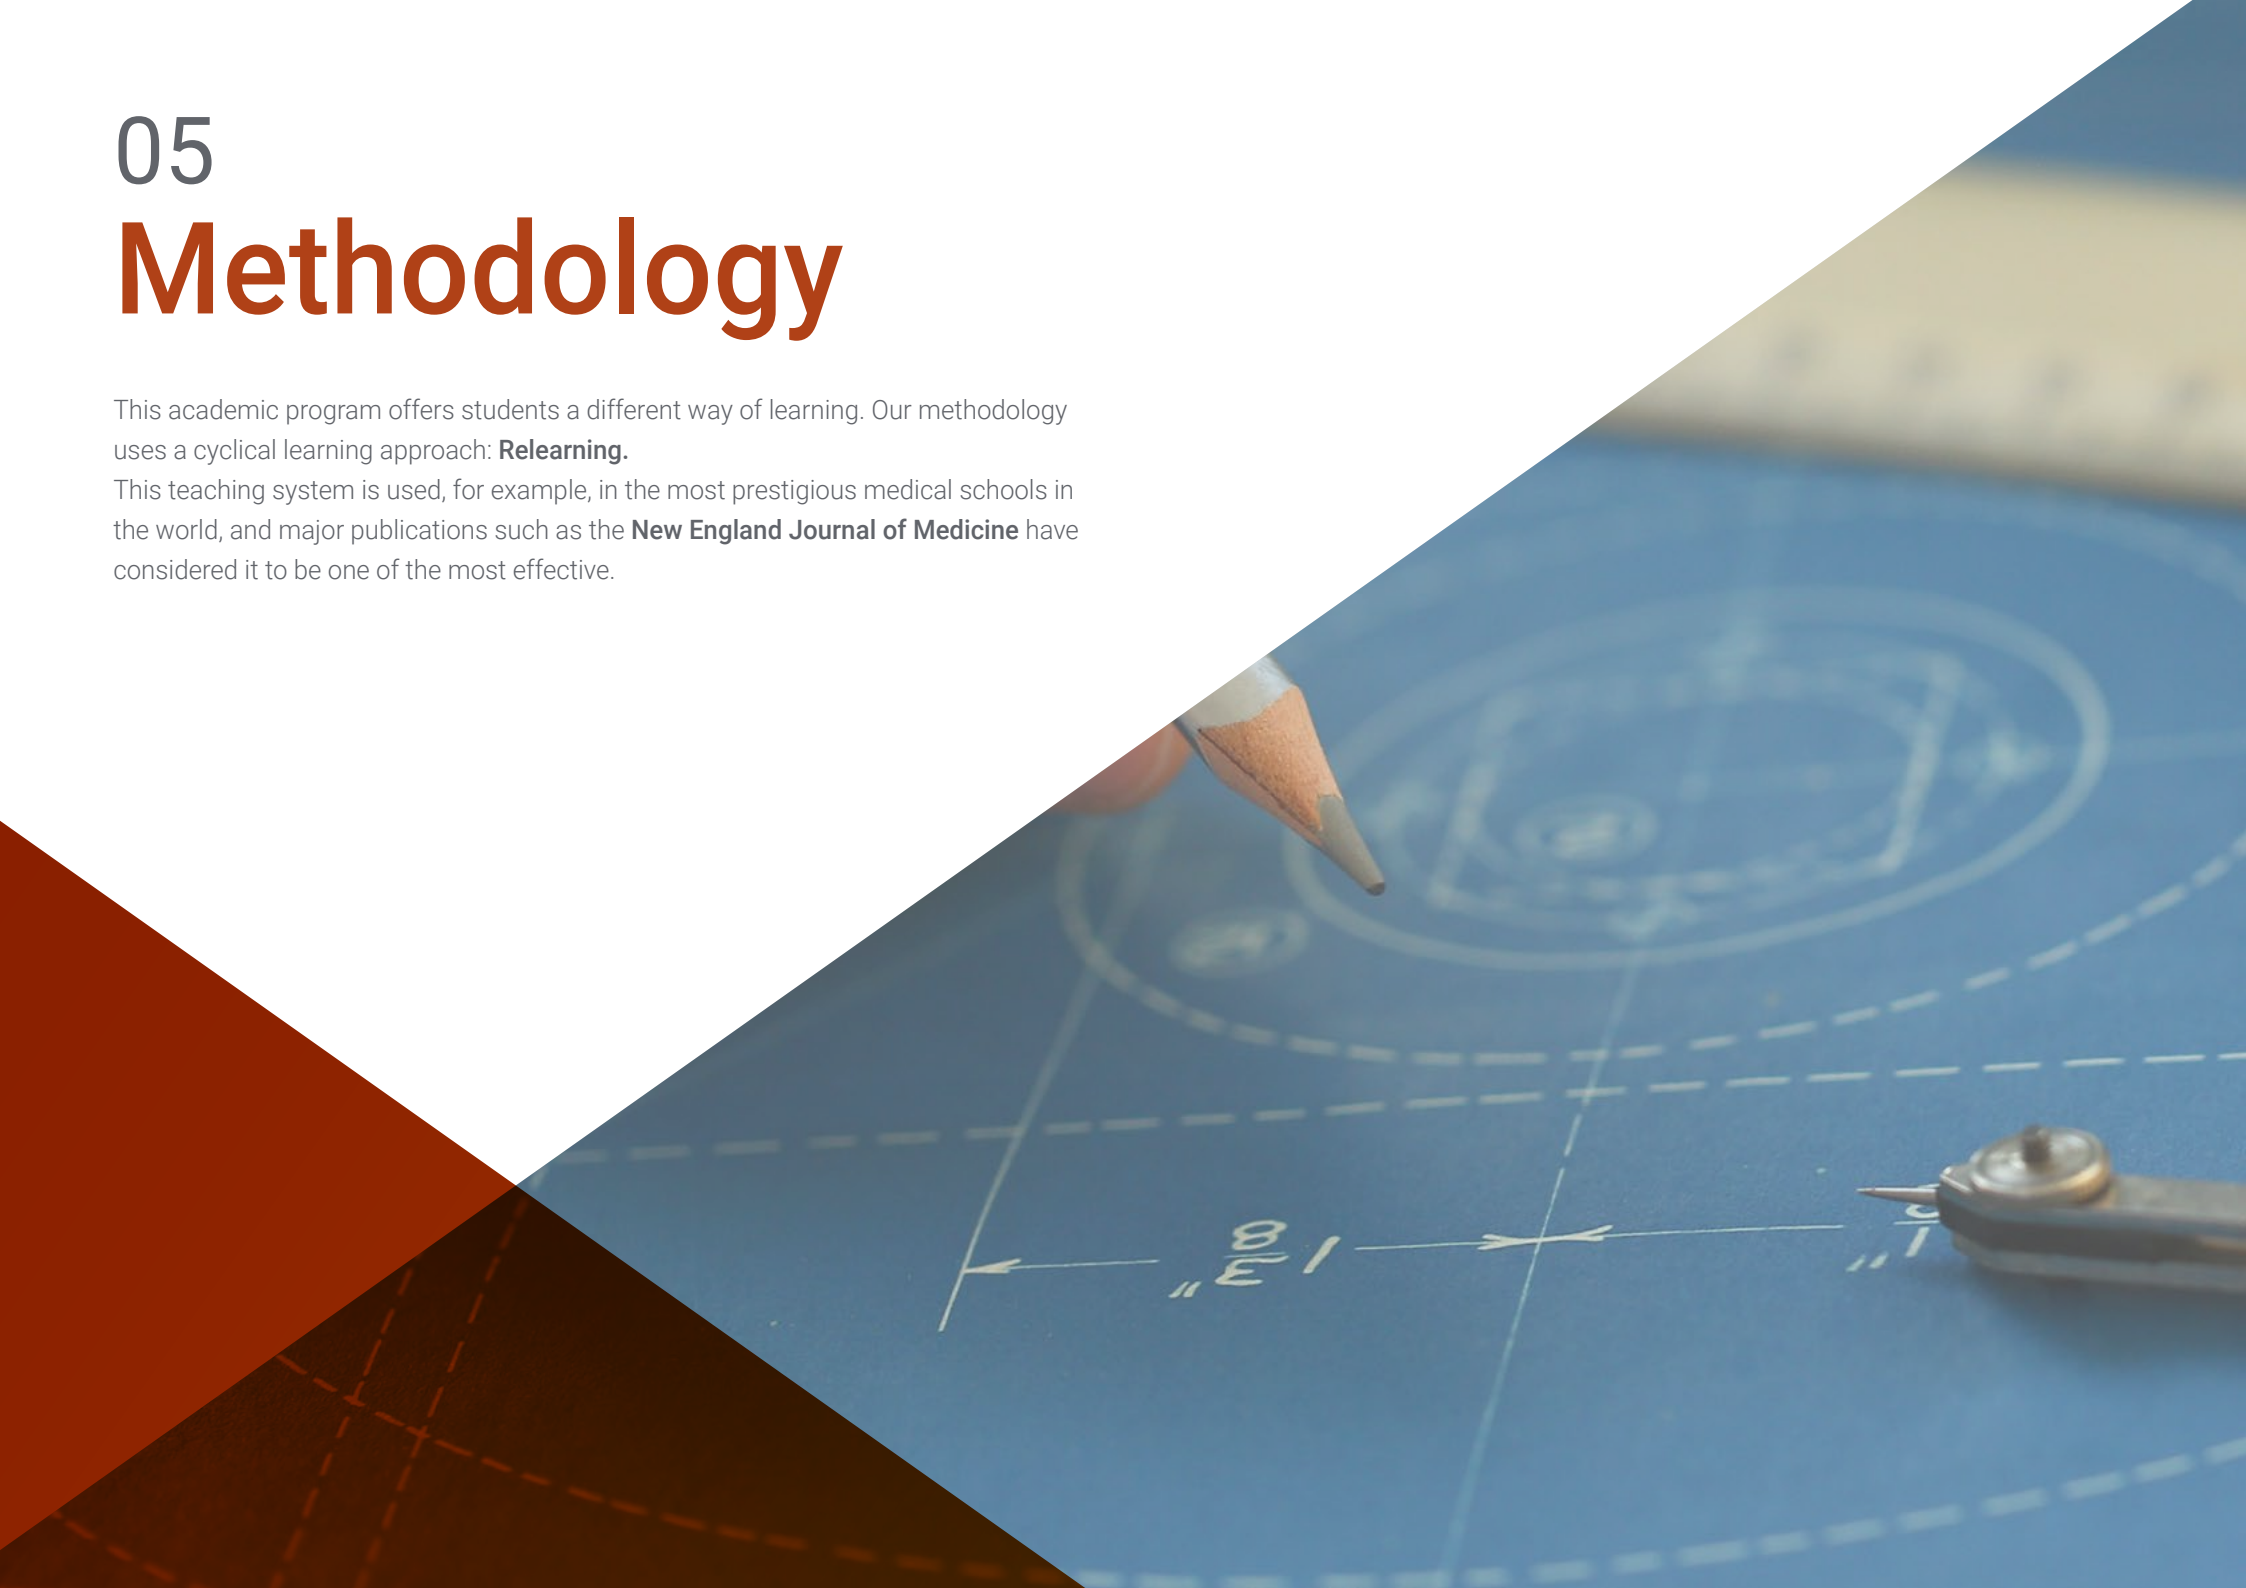

*A unique learning opportunity that will catapult your career to the next level
Don't let it slip away"*

05

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning.**

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

The case method is the most widely used learning system in the best faculties in the world. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

06

Certificate

The Postgraduate Certificate in Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

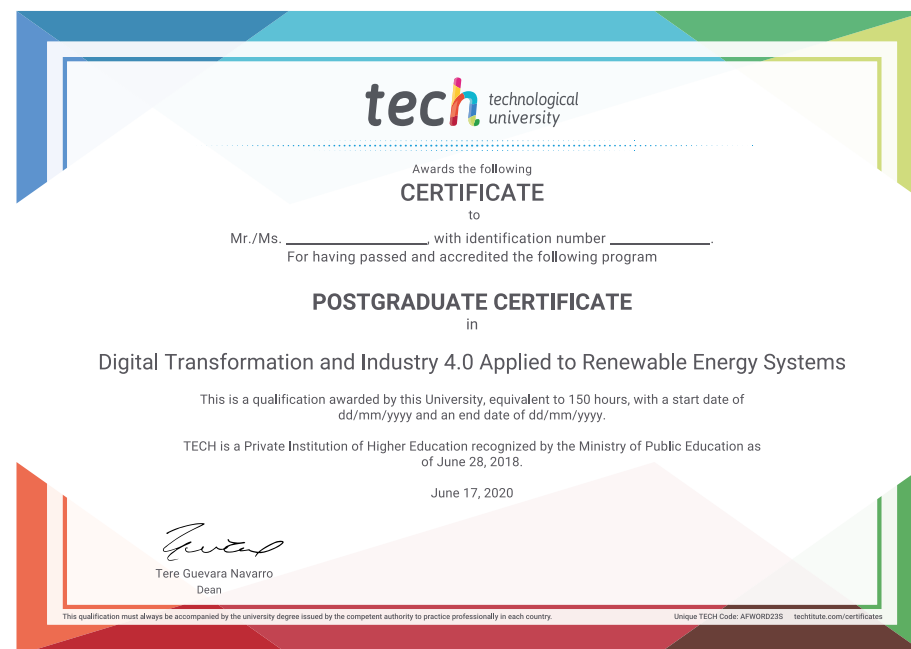

This **Postgraduate Certificate in Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems** contains the most complete and up-to-date program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** diploma issued by **TECH Technological University** via tracked delivery*.

The certificate issued by **TECH Technological University** will reflect the qualification obtained in the **Postgraduate Certificate**, and meets the requirements commonly demanded by labor exchanges, competitive examinations and professional career evaluation committees.

Title: **Postgraduate Certificate in Digital Transformation and Industry 4.0 Applied to Renewable Energy Systems**

Official N° of Hours: **150 h.**

*Apostille Convention. In the event that the student wishes to have their paper certificate issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
