01

Introduction

This comprehensive Postgraduate Certificate is to provide engineers with in-depth knowledge of earth retaining structures. For this purpose, a general review will be carried out, ranging from the different thrusts present in this type of structures, with complementary elements such as a practical vision of the repercussion mode of surface loads on this type of structures, to a discretization of the different types of structures of this typology most commonly used. These contents will allow the professional to carry out an original and application-oriented analysis of the theoretical concepts developed throughout the Postgraduate Certificate, in such a way that they will unequivocally become a much more capable and sought-after professional.

“

TECH puts in your hands a first class program that will provide you with the knowledge and tools necessary to practice with total success in this exciting field"

Postgraduate Certificate in Retention Structures: Walls and Screens is academically designed to provide in-depth knowledge, based on advanced concepts already acquired in the world of civil engineering and from a practical application point of view, of the most important geotechnical aspects that can be found in different types of civil works.

The content ranges from the specific behavior of soils and rocks, with a constant differentiation of both types of terrain throughout all the topics, to their direct application in foundations and structures.

The Postgraduate Certificate, has a syllabus that mixes some of them with more applied theoretical load (such as those related to the models of ground behavior, the necessary requirements for a good identification of soils and rocks or the interaction of the ground with seismic disturbances), with others with eminent component of practical analysis, where the knowledge acquired on the behavior of the ground and its stress-strain states of this first part, are applied to the usual structures of Geotechnical Engineering: slopes, walls, walls, screens, tunnels.....

Likewise, during this Postgraduate Certificate, the study of the thrusts present in soil retaining structures and the structural analysis of how they behave under these loads will be addressed, there is a large part of this module that will refer to the displacements at the back of these elements.

Surface settlement after the execution of these structures and lateral displacements of the structures together with the description of the elements involved in the design of bracing for deep excavations are points that are also addressed throughout the Postgraduate Certificate.

The topics covered during this training end with an approach to the statistical calculation and the safety coefficients used in the calculations of these elements in both provisional and definitive stages.

For this reason, the Postgraduate Certificate in Retention Structures: Walls and Screens integrates the most complete and innovative educational program on the current market in terms of knowledge and latest available technologies, in addition to encompassing all the sectors or parties involved in this field. In addition, the Postgraduate Certificate consists of exercises based on real cases of situations currently managed or previously faced by the teaching team.

All this, along a 100% online training that provides the student with the ease of being able to take it wherever and whenever they want. All you need is a device with internet access, and you will be able to access a universe of knowledge that will be the main asset of the engineer when positioning themselves in a sector that is increasingly in demand by companies in various sectors.

This **Postgraduate Certificate in Retention Structures: Walls and Screens** contains the most complete and up-to-date educational program on the market. The most important features of the program include:

- » Practical cases presented by experts in Civil Engineering and Geotechnics
- » The graphic, schematic, and eminently practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice.
- » Practical exercises where the self-assessment process can be carried out to improve learning
- » Its special emphasis on innovative methodologies
- » Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- » Content that is accessible from any fixed or portable device with an Internet connection

You will be provided with innovative teaching materials and resources that will facilitate the learning process and the retention of the contents learned for a longer period of time"

The program's teaching staff includes professionals from the sector who contribute their work experience to this training program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide professionals with situated and contextual learning, i.e., a simulated environment that will provide immersive program, designed for training oneself in real situations.

This program is designed around Problem Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, the professional will be assisted by an innovative interactive video system created by renowned and experienced engineering experts.

Apply the latest advances in retention structures like walls and screens in your daily practice and give your resume a value boost

A 100% online training that will allow you to combine your studies with the rest of your daily activities

02

Objectives

TECH has designed this comprehensive Postgraduate Certificate with the aim of training engineering professionals to be able to design, implement and work on Civil Works, knowing everything related to this industry and technical and professional aspects at the national and international level that directly affect it. To this end, specific aspects of the profession that stand out for their enormous importance in today's business landscape will be addressed, and for which large corporations are increasingly demanding competent engineers with a solid specialized training.

“

With this program, TECH has only one goal: to help you grow in your profession and become a prestigious engineer”

General Objectives

- » Delve deeper into kinds of grounds, not only in their typology but also in their behavior
Not only in the evident differentiation of stresses and deformations of soils and rocks, but also under particular but very common conditions, such as the presence of water or seismic disturbances.
- » Efficiently recognize the needs for soil characterization, being able to design campaigns with the optimal means for each type of structure, optimizing and giving added value to the study of materials
- » Identify the behavior of slopes and semi-subterranean structures such as foundations or walls in their different typologies This complete identification must be based on understanding and being able to anticipate the behavior of the terrain, the structure and its interface Know in detail possible faults that each set can produce and as a consequence have a deep understanding of the repair operations or improvement of materials to mitigate damage
- » Receive a complete tour of tunnel and gallery excavation methodologies, analyzing all drilling procedures, design constraints, support and lining

Specific Objectives

- » Define and acquire a complete knowledge of the loads that the soil produces on the retaining structures
- » Extend this knowledge with the analysis of the interaction of surface loads, lateral loads and seismic loads that may occur in the soil adjacent to this type of structures
- » Go through the different types of retaining structures, from the most common continuous screens and piles, to other elements of more specific use such as sheet piling or "Soldier-piles"
- » Deal with the deformational behavior of the backside of these elements, both in the short and long term With special interest in the calculation of surface seating in deep screens
- » Learn more about the sizing and behavior of bracing structures, struts and anchors
- » Analyze with current finite element calculation methods the most common safety coefficients in this type of structures as well as their correlation applying statistical reliability concepts

“

A training designed based on practical cases that will teach you how to act in real situations in the daily practice of your profession"

03

Course Management

TECH applies a criterion based on high quality in all its training. This guarantees students that by studying here they will find the best didactic content taught by the best professionals in the sector. In this sense, this Postgraduate Certificate in Retention Structures: Walls and Screens has highly prestigious professionals in this area, who bring to the training the experience of their years of work, as well as the knowledge acquired from research in the field. All to provide the engineer with a high-level program, which will enable them to practice in national and international environments with greater guarantees of success.

“

Learn with the best and acquire the knowledge and skills you need to intervene in this area of development with total success”

Management

Mr. Estébanez Aldona, Alfonso

- ♦ Civil Engineer graduated from the Polytechnic University of Madrid
- ♦ Studying the E.T.S.I. Ph.D Roads, Canals and Ports U.P.M. in the Department of Terrain Engineering.
- ♦ Course of Health and Safety Coordinator in Construction Works registered by the CAM nº 3508
- ♦ Engineering and Technical Director at ALFESTAL
- ♦ International Consultant and Project Manager at D2
- ♦ Project Manager in the Department of Tunnels and Underground Works in Inarsa S.A
- ♦ Assistant Technician in the Geology and Geotechnical Department of Intecsa-Inarsa

Professors

Mr. Sandin Sainz-Ezquerro, Juan Carlos

- » Specialist in the calculation of structures and foundations, fields in which he has developed his entire professional career over the last 25 years
- » Civil Engineer graduated the ETSI of, Canals and Ports from the Polytechnic University of Madrid (U.P.M.).
- » Studying the E.T.S.I. Ph.D Roads, Canals and Ports U.P.M. in the Structures Department
- » Course on integration of BIM technology in structural design 2017
- » Lecturer in the BIM Master developed at the Colegio de Caminos 2019
- » Technical assistance for SOFISTIK AG for Spain and Latin America, finite element modeling software for terrain and structures

Mr. Clemente Sacristan, Carlos

- » Civil Engineer graduated from the Polytechnic University of Madrid
- » Development of large-scale linear works for different administrations (ADIF, Ministry of Public Works, Provincial Council of Vitoria...) being a reference project manager in the field of linear works.
- » Executive at BALGORZA S.A.
- » Occupational risk prevention course for construction company managers
- » Advanced course in management of large turnkey projects (EPC)

Ms. Lope Martín, Raquel

- » Geological Engineer Complutense University of Madrid UCM
- » PROINTEC Technical Department
- » PROINTEC's technical department has been involved in various projects requiring improvement treatments, both nationally and internationally: jet grouting, gravel columns, vertical drainage, etc.
- » Course on Geotechnics Applied to Building Foundations
- » Course on Technical Control for Property and Casualty Insurance Geotechnics, foundations and structures

An in-depth knowledge of the different soil retaining structures is a skill that is in high demand in today's business and professional environments"

04

Structure and Content

The syllabus of the Postgraduate Certificate is structured as a comprehensive tour through each and every one of the concepts required to understand and work in this field. Thus, through a novel didactic approach, based on the practical application of the contents, the engineer will learn and understand the functioning of geotechnics and retaining structures, knowing how to design and implement projects in this sense, providing high safety indexes and services to the companies. This, in addition to adding value to your professional profile, will make you a much better prepared professional to work in a variety of environments.

“

A complete curriculum focused on the acquisition of knowledge and its conversion into real skills, created to propel you towards excellence”

Module 1. Retention Structures: Walls and Screens

- 1.1. Ground Thrusts
 - 1.1.1. Ground Thrusts Present in Retention Structures
 - 1.1.2. Impact of Surface Loads on Thrusts
 - 1.1.3. Modeling of Seismic Loads in Retaining Structures
- 1.2. Pressure Modulus and Ballast Coefficients
 - 1.2.1. Determination of Geological Properties Influencing within Retaining Structures
 - 1.2.2. Spring Type Models of Simulation in Retention Structures
 - 1.2.3. Pressure Modulus and Ballast Coefficient as Elements of Soil Resistance
- 1.3. Walls: Types and Foundations
 - 1.3.1. Types of Walls and Behaviour Differences
 - 1.3.2. Particularities of Each Types With Regard to Calculation and Limitation
 - 1.3.3. Factors That Affect Inside the Foundation of the Walls
- 1.4. Continuous Sheet Piles, Sheet Piling and Pile Screens
 - 1.4.1. Basic Differences in the Application of Each of the Screen Types
 - 1.4.2. Individual Characteristics in Each Type
 - 1.4.3. Structural Limitations of Each Type
- 1.5. Design and Pile Calculations
 - 1.5.1. Sheet Piles
 - 1.5.2. Sheet Pile Use Limitations
 - 1.5.3. Planning, Performance and Execution Details
- 1.6. Design and Continuous Sheet Calculations
 - 1.6.1. Continuous Sheets
 - 1.6.2. Limitation of the Use of Continuous Sheets
 - 1.6.3. Planning, Performance and Execution Details

1.7. Anchoring and Bracing

1.7.1. Movement-Limiting Elements in Retaining Structures

1.7.2. Types of Anchoring and Limiting Elements

1.7.3. Control of Injections and Injection Materials

1.8. Ground Movements in Containment Structures

1.8.1. Stiffness of Each Type of Retaining Structure

1.8.2. Movement Limitations in the Ground

1.8.3. Empirical and Finite Element Computational Methods for Motions

1.9. Decrease of Hydrostatic Pressure

1.9.1. Hydrostatic Loads in Retaining Structures

1.9.2. Behavior of Retention Structures According to Long-Term Hydrostatic Pressure

1.9.3. Drainage and Waterproofing of Structures

1.10. Reliability in the Calculation of Retaining Structures

1.10.1. Statistical Calculation in Retaining Structures

1.10.2. Safety Coefficients for Expensive Design Criterion

1.10.3. Types of Faults in Retaining Structures

A unique learning opportunity that will catapult your career to the next level. Don't let it slip away."

05

Methodology

This training provides you with a different way of learning. Our methodology uses a cyclical learning approach: **Re-learning**.

This teaching system is used in the most prestigious medical schools in the world, and major publications such as the *New England Journal of Medicine* have considered it to be one of the most effective.

“

Discover Re-learning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

Our program offers you a revolutionary approach to developing your skills and knowledge. Our goal is to strengthen your skills in a changing, competitive, and highly demanding environment.

“

With TECH you can experience a way of learning that is shaking the foundations of traditional universities around the world”

We are the first online university to combine Harvard Business School case studies with a 100% online learning system based on repetition

A learning method that is different and innovative.

This Engineering program at TECH- Technological University is an intensive program that prepares you to face all the challenges in this area, both nationally and internationally. We are committed to promoting your personal and professional growth, the best way to strive for success, that is why at TECH Technological University you will use Harvard case studies, with which we have a strategic agreement that allows us to offer you material from the best university in the world.

“

Our program prepares you to face new challenges in uncertain environments and achieve success in your career”

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

In a given situation, what would you do? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the program, you will be presented with multiple real cases. You will have to combine all your knowledge, and research, argue, and defend your ideas and decisions.

The student will learn, through collaborative activities and real cases, how to solve complex situations in real business environments

Re-Learning Methodology

Our University is the first in the world to combine Harvard University case studies with a 100%-online learning system based on repetition, which combines 16 different teaching elements in each lesson.

We enhance Harvard case studies with the best 100% online teaching method: Re-learning.

In 2019 we obtained the best learning results of all Spanish-language online universities in the world

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Re-learning.

Our University is the only one in Spanish-speaking countries licensed to incorporate this successful method. In 2019 we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, program structure, objectives...) based on the best Spanish online university indicators.

In our program, learning is not a linear process, but rather a spiral (we learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

With this methodology we have trained more than 650,000 university graduates with unprecedented success. In fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Re-learning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success

Based on the latest evidence in neuroscience, not only do we know how to organize information, ideas, images, memories, but we also know that the place and context where we have learned something is crucial for us to be able to remember it and store it in the hippocampus, and retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

In this program you will have access to the best educational material, prepared with you in mind:

Study Material

All teaching material is produced by the specialists who teach the program, specifically for the course, so that the teaching content is highly specific and precise.

This content is then adapted in an audiovisual format that will create our way of working online, with the latest techniques that allow us to offer you high quality in all of the material that we provide you with.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an expert strengthens knowledge and memory, and generates confidence in our future difficult decisions.

Practising Skills and Abilities

You will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization we live in.

Additional Reading

Recent articles, consensus documents, international guides. in our virtual library you will have access to everything you need to complete your training.

Case Studies

You will complete a selection of the best case studies in the field used at Harvard. Cases that are presented, analyzed, and supervised by the best senior management specialists in Latin America.

Interactive Summaries

We present the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This unique multimedia content presentation training system was awarded by Microsoft as a "European Success Story".

Testing & Re-testing

We periodically evaluate and re-evaluate your knowledge throughout the program. We do this on 3 of the 4 levels of Miller's Pyramid.

06

Certificate

The Postgraduate Certificate in Retention Structures: Walls and Screens guarantees, in addition to the most rigorous and up-to-date training, access to a Postgraduate Certificate qualification issued by TECH-Technological University.

“

Successfully complete this program and receive your diploma without having to travel or conduct laborious paperwork”

This **Postgraduate Certificate in Retention Structures: Walls and Screens** contains the most complete and up-to-date scientific program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH - Technological University** via **tracked delivery**.

The diploma issued by **TECH - Technological University** will reflect the qualification obtained in the **Postgraduate Certificate**, and meets the requirements commonly required by labor exchanges, competitive examinations career evaluation committees.

Title: **Certificate in Retention Structures: Walls and Screens**

ECTS: **6**

Official Number of Hours: **150**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
