Introduction

The future of cities worldwide will be driven by new technologies. Smart cities that will facilitate the coexistence of their enablers and promote sustainable and balanced development. Within this paradigm, Smart City platforms play a fundamental role and will be the key to their development. To prepare you for this change, we offer you a specific education with an absolutely innovative academic program and an exceptional team of teachers backed by their professional experience. A successful program for professionals looking for further training.

“

Technological advances have come to revolutionize city lifestyles. Join us, develop your skills and take a step forward in your daily work with Smart City Platforms"

Smart Cities today are at the forefront of digital transformation processes and, according to all technological indicators, we are only at the beginning of this journey, since, as these digital capabilities are explored, new paths and application areas are being incorporated into the smart city ecosystem.

This Postgraduate Diploma will address from a functional and business perspective the different models currently used to build smart cities through four main blocks: first, the smart city strategy model as a fundamental basis on which to implement, measure and monitor a set of actions that allow cities to address their smart transformation in the most efficient and sustainable way possible. Second, the different Smart City construction models used, highlighting those based on the use of IoT devices and vertical solutions, models based on GIS technology and geospatial analysis and models based on VMS systems. Third, the model based on Integration Platforms, which will be the cornerstone that will allow the complete development and transformation of a smart city, as well as guarantee its interoperability with multiple systems and ensure the security of information and infrastructures. Finally, how to approach the transformation of cities from a management and operational point of view.

As it could not be otherwise, this training puts special emphasis on Smart City platforms. The main capabilities and general architecture that a digital city platform should provide, as well as the regulatory framework and recommendations for implementation will be outlined. For this, it is important to know the enabling elements that, even if they are outside what we consider platform, are of paramount importance to achieve the integration of all the elements that can make up a smart city structure, such as communication networks and distributed computing systems, both in Cloud and Edge. We will also show the features that these platforms must have in the support layer, which is the one that will offer its services to the others (business layers) for their correct operation; among these services will be security, monitoring and user management.

This **Postgraduate Diploma in Smart City Platforms** contains the most complete and up-to-date program on the market. The most important features include:

- ◆ Case studies presented by experts in Smart Cities
- ◆ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ◆ Practical exercises where self-assessment can be used to improve learning
- ◆ Special emphasis on innovative methodologies in Smart Cities
- ◆ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

The completion of this Postgraduate Diploma will place engineering and architecture professionals at the forefront of the latest developments in the sector"

“

This Postgraduate Diploma is the best investment you can make in the selection of a refresher program in the field of Smart Cities. We offer you quality and free access to content"

Its teaching staff includes professionals from the fields of engineering and architecture, who contribute their work experience to this program, as well as renowned specialists from prestigious universities and leading societies.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive training programmed to train in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. To do so, the professional will be assisted by an innovative interactive video system created by renowned and experienced experts in Smart City Platforms.

This specialization has the best educational material, which will allow you a contextual study that will facilitate your learning.

This 100% online Postgraduate Diploma will allow you to balance your studies with your professional work. You choose where and when to train.

02

Objectives

The Postgraduate Diploma in Smart City Platforms is aimed at facilitating the performance of the professional to acquire and learn the main developments in this field, which will allow them to practice their profession with the highest quality and professionalism.

“

Our goal is for you to become the best professional in your sector. And for this we have the best methodology and content”

General Objectives

- ◆ Recognize Smart City projects as particular use cases of digitalization projects through platforms, to know their main particularities and the state of the art of these projects in an international context
- ◆ Value the two essential elements in any smart city project, data as the main asset and the citizen as the main motivator of such projects
- ◆ Analyze the different technologies and models to address the digital transformation of cities in depth and understand the advantages and opportunities that a model based on integration platforms offers
- ◆ Delve into the general architecture of Smart Cities Platforms and the applicable reference legislation, using international standards
- ◆ Identify the role that new digital technologies play in the construction of the smart city model: LPWAN, 5G, Cloud and Edge Computing, IoT, Big Data, Artificial Intelligence
- ◆ Know the functionalities of the different layers that constitute the digital platforms for cities in detail: support layer, acquisition layer, knowledge layer and interoperability layer
- ◆ Differentiate between digital government services and Smart city services, the possibilities of integration between the two worlds and the resulting new services for citizens, public administration services 4.0
- ◆ Differentiate between the two types of solutions offered within the Smart Cities smart services layer: vertical solutions and transversal solutions
- ◆ In-depth breakdown of the main vertical solutions applied in cities: waste management, parks and gardens, parking, public transport management, urban traffic control, environment, security and emergencies, water consumption and energy management
- ◆ Know the transversal solutions of the smart services layer that can be implemented in smart city projects in detail
- ◆ Delve into the difference between city management and nation management, and identify their main challenges and lines of activity
- ◆ Acquire the skills and knowledge necessary for the design of technological solutions in the fields of tourism, home care, agriculture, ecosystemic spaces and urban service provision
- ◆ Have a global perspective of Smart Cities projects, identifying the most useful tools in each phase of the project
- ◆ Recognize the keys to success and how to deal with the possible difficulties that a smart city project may present
- ◆ Identify the main trends and paradigms that will serve as leverage for the future transformation of Smart Cities
- ◆ Conceptually design plans and solutions aligned with the Sustainable Development Goals of the 2030 Agenda

Specific Objectives

Module 1. Smart City Construction Models

- ◆ Acquire the main knowledge to apply the methodology and tools necessary to implement a smart city strategic plan
- ◆ In-depth analysis of different technologies and models to address the Smart transformation of cities
- ◆ Distinguish between the advantages and disadvantages of the different smart city models and their main applications
- ◆ Understand and conceptualize the paradigm of the integration platform model, the benefits it brings and its fundamental role in the design of cities
- ◆ Understand the differences between technology models based on Open Source technology and licensed models
- ◆ Delve into the phases of a global Smart Cities project, its transformation and the generation of new value-added services as a lever for socio-economic growth

Module 2. Smart City Platforms: General Architecture and Acquisition Layer

- ◆ Discuss the general architecture of Smart Cities platforms and the applicable reference standards in detail
- ◆ Identify the enabling elements of the platform that, although outside its reference architecture, are essential for its operation
- ◆ In-depth breakdown of the support layer services and understanding of how they work and interact with the rest of the architecture
- ◆ Know in detail the functionalities of the Acquisition Layer and the different acquisition strategies depending on the type of data to be incorporated in the Smart City

Module 3. Smart City Platforms: Knowledge Layer and Interoperability Layer

- ◆ Understand in detail the knowledge layer and capabilities that enable smart cities
- ◆ Understand the importance of data modeling to make the data understandable by the platform, enabling operations to be performed on the data
- ◆ Understand what types of analytics can be performed on the data and which are the most appropriate depending on the expected results
- ◆ Delve into the technological capabilities of data storage and the benefits of each one
- ◆ Gain an in-depth understanding of the data exposure capabilities enabled by the interoperability layer, from those oriented to data exposure to those that enable the creation of applications and feed external systems

*Join us and we will help you
achieve professional excellence"*

03

Course Management

TECH has professionals specialized in each area of knowledge, who contribute their work experience to the programs. A multidisciplinary team with recognized prestige that has come together to offer all their knowledge in this area.

“

Our university employs the best professionals in all areas who share their knowledge to help you"

Management

Mr. Garibi, Pedro

- ◆ Technical Electronic Engineer from the University of Deusto
- ◆ Telecommunications Engineer by the University of Deusto
- ◆ Master's Degree in Mobile Communication from the Polytechnic University of Madrid
- ◆ Professional with more than 20 years of experience in project management
- ◆ Solutions architect in the fields of Smart & Safe Cities, (Indra, Huawei, T-Systems)
- ◆ Manager of Smart City projects, both in the R&D and production areas
- ◆ Independent Smart Cities Consultant
- ◆ Co-chair of the United Nations U4SSC group for the elaboration of a framework for Artificial Intelligence in Smart Cities
- ◆ Speaker at several Smart Cities congresses in Spain and Europe
- ◆ Author of several articles on the use of intelligent platforms for the improvement of citizen security
- ◆ Member of the Official College of Telecommunication Engineers of Spain (COIT)

Professors

Ms. Domínguez, Fátima

- ◆ Consultant and area manager of Business Development for Public Administrations in the field of Smart Cities (Indra-Minsait)
- ◆ Degree in Civil Engineering from the Polytechnic University of Leiria (Portugal)
- ◆ ThePowerMba Business Expert - Business Management and Administration
- ◆ Responsible for the Cáceres Smart Heritage Project
- ◆ Product owner of solutions for the intelligent management of tourist destinations
- ◆ Expert in smart solutions in the fields of agribusiness, urban services and tourism destination management

Mr. Koop, Sergio

- ◆ Expert in smart solutions in the fields of urban resilience, mobility, urban services and tourism destination management
- ◆ Degree in Industrial Technologies Engineering from Carlos III University of Madrid
- ◆ Master's Degree in Business Management from Carlos III University of Madrid
- ◆ More than 4 years of experience as a Smart Cities consultant (Indra - Minsait)
- ◆ Author of several reports focused on the use of disruptive technologies for the transformation of public administrations
- ◆ Collaborator of the S3 HIGH TECHFARMING group of the EU for the development of technologies to improve agricultural productivity

Mr. Budel, Richard

- ◆ Project management professional in the public sector
- ◆ Diploma in Medical Anthropology from Trent University (Canada)
- ◆ Managing Director of Simplicities Ltd
- ◆ Managing Partner of the Public Sector Department at Sullivan & Stanley
- ◆ Chairman of the Digital Government Advisory Board at Huawei
- ◆ Former Chief Information Officer (CIO/CTO) at IBM and Huawei
- ◆ Former IT Director, Department of Public Safety and Justice, Government of Ontario, Canada
- ◆ Thought leader and speaker at events in more than 70 countries around the world
- ◆ Collaborator in UN4SSC, EIP-SCC, Smart Cities Council and other multinational organizations

Mr. Bosch, Manuel

- ◆ Member of the Big Data and Artificial Intelligence Cluster of the Madrid City Council in the Interoperable Projects working group
- ◆ Graduate in Mining Engineering from the Polytechnic University of Madrid
- ◆ Consultant in Smart Cities and Nations, (Indra - Minsait)
- ◆ Expert in Smart Solutions in the fields of sustainability and circular economy
- ◆ Expert in the integration of eGovernment solutions in Smart Cities environments.
- ◆ Extensive experience in Smart City projects
- ◆ Collaborator of the thematic group "City Platforms" of the U4SSC (United for Smart Sustainable Cities) initiative coordinated by ITU
- ◆ Author of several reports focused on the modernization of public administration through the use of new technologies

Get trained at the one of the world's leading private online universities"

03

Structure and Content

The structure of the contents has been designed by leading professionals in the intelligent infrastructure sector, with extensive experience and recognized prestige in the profession, and aware of the benefits that the latest educational technology can bring to higher education.

“

We have the most complete and up-to-date academic program in the market. We strive for excellence and for you to achieve it too"

Module 1. Smart City Construction Models

- 1.1. Different Models to Build a Smart City
 - 1.1.1. Different Smart City Models
 - 1.1.2. Greenfield and Brownfield
- 1.2. Smart City Strategy
 - 1.2.1. Master Plans
 - 1.2.2. Monitoring and Implementation: Indicators
- 1.3. Models Based on IoT Collections and Vertical Solutions
 - 1.3.1. Models Based on IoT Collections
 - 1.3.2. Models Based on Vertical Solutions
- 1.4. Models Based on GIS Systems
 - 1.4.1. Spatial Data and GIS Tools for the Management and Analysis of Geographical Information
 - 1.4.2. Geospatial Analysis
- 1.5. Models Based on VMS
 - 1.5.1. Main Features of VMS Systems
 - 1.5.2. VMS Systems for Traffic Control, Mobility and Urban Safety
- 1.6. Models Based on Integration Platforms
 - 1.6.1. The Value of an Integrating Vision
 - 1.6.2. City Semantics
- 1.7. Platform Features and Rules
 - 1.7.1. Features of Smart Cities Platforms
 - 1.7.2. Normalization, Standardization and Interoperability
- 1.8. Security in Smart City Platforms
 - 1.8.1. Cities and Critical Infrastructure
 - 1.8.2. Security and Data
- 1.9. Open Source and Licensing
 - 1.9.1. Open Source or Licensed Platforms
 - 1.9.2. Solutions and Services Ecosystems
- 1.10. Smart Cities as a Service or as a Project
 - 1.10.1. The Comprehensive Smart City Project: Consultancy, Products and Technical Office
 - 1.10.2. Smart Services as a Lever for Growth

Module 2. Smart City Platforms: General Architecture and Acquisition Layer

- 2.1. The General Platform Model
 - 2.1.1. Platform Layer Model
 - 2.1.2. Reference Standards and Recommendations Applicable at the National and International Levels
- 2.2. Architecture
 - 2.2.1. Platform Architecture
 - 2.2.2. Block Description
- 2.3. Enabling Tools
 - 2.3.1. Communication Networks
 - 2.3.2. Cloud Computing and Edge Computing
- 2.4. Support Layer
 - 2.4.1. Support Layer Services
 - 2.4.2. Configuration Services
 - 2.4.3. User Management Services
 - 2.4.4. Supervision and Maintenance Services
 - 2.4.5. Security Services
- 2.5. Acquisition Layer
 - 2.5.1. Acquisition Layer Purpose
 - 2.5.2. Integration of the Acquisition Layer within the Model
 - 2.5.3. Acquisition Layer Main Features
- 2.6. Technologies Used for Acquisition
 - 2.6.1. Main Data Acquisition Technologies
 - 2.6.2. Use of Acquisition Technologies
- 2.7. IoT Data Acquisition
 - 2.7.1. IoT Data
 - 2.7.2. Device Data Integration
 - 2.7.3. Data Integration from IoT Platforms
 - 2.7.4. Digital Twin in IoT Management

- 2.8. Data Acquisition from Existing Systems
 - 2.8.1. Integration of Existing Systems
 - 2.8.2. The Smart City Platform as a Platform of Platforms
 - 2.8.3. Platform Data Integration
- 2.9. Repository Data Acquisition
 - 2.9.1. Information in Databases
 - 2.9.2. Data Integration from Databases
 - 2.9.3. How to Manage Information Duplicity
- 2.10. Unstructured Data Acquisition
 - 2.10.1. Unstructured Data
 - 2.10.2. Sources of Unstructured Information
 - 2.10.3. Unstructured Information Acquisition

Module 3. Smart City Platforms: Knowledge Layer and Interoperability Layer

- 3.1. Knowledge Layer
 - 3.1.1. Knowledge Layer Purpose
 - 3.1.2. Integration of the Knowledge Layer within the Model
 - 3.1.3. Knowledge Layer Main Features
- 3.2. Data Modeling
 - 3.2.1. Data Modeling
 - 3.2.2. Data Modeling Technologies and Strategies
- 3.3. Rule-Based and Process-Based Processing
 - 3.3.1. Rule-Based Modeling
 - 3.3.2. Process-Based Modeling (PBM)
- 3.4. Processing Big Data
 - 3.4.1. Big Data
 - 3.4.2. Descriptive, Predictive and Prescriptive Analytics
 - 3.4.3. Artificial Intelligence and Machine Learning in Cities
- 3.5. Analytical Collaboration Tools
 - 3.5.1. Integration of Collaborative Data Analytics Tools
 - 3.5.2. Main Collaborative Tools
 - 3.5.3. Benefits of Using Collaborative Analytics Tools
- 3.6. Data Bases
 - 3.6.1. The Different Databases and their Application
 - 3.6.2. Relational Databases
 - 3.6.3. Non-Relational Databases
 - 3.6.4. GIS Databases
- 3.7. Interoperability Layer
 - 3.7.1. Interoperability Layer Purpose
 - 3.7.2. Integration of the Interoperability Layer within the Model
 - 3.7.3. Interoperability Layer Main Features
- 3.8. Graphical Data Display Tools
 - 3.8.1. The Importance of Data Presentation
 - 3.8.2. Integrated Graphics Tools vs. External Tools
- 3.9. Integration-Enabling Tools
 - 3.9.1. Simple and Reliable Data Exposure
 - 3.9.2. API Managers
- 3.10. SDK-Based Development Tools
 - 3.10.1. Software Development Tools
 - 3.10.2. SDK Sandboxes

A comprehensive and multidisciplinary educational program that will allow you to excel in your career, following the latest advances in the field of intelligent infrastructure and Smart Cities"

04

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The case method is the most widely used learning system in the best faculties in the world. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

05

Certificate

The Postgraduate Diploma in Smart City Platforms guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Diploma issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Postgraduate Diploma in Smart City Platforms** contains the most complete and up-to-date program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Diploma** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Diploma, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: **Postgraduate Diploma in Smart City Platforms**

Official N° of Hours: **450 h.**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
