Introduction

Today, English is in high demand in the legal sector. Translating and interpreting judicial and socioeconomic texts has become the task of many experts in this area, who have found in it a job opportunity with broad and promising future career prospects. With the aim of enabling graduates to specialize in this field, TECH has developed a course that adapts to their academic needs. It is a 100% online program, designed based on the latest pedagogical methodology, which will allow you to improve and expand your English language skills and its legal in less than six months.

“

By enrolling in this Postgraduate Diploma, you will be accessing an intensive and exhaustive syllabus, which will turn you into a specialist in legal English translation and interpreting”

In many Spanish-speaking countries, the law obliges the system to have a professional who intervenes in the translation and interpreting of legal proceedings in the event that the intervening party or parties only speak English. The passing and implementation of this legislation has led to an increase in the labor demand for specialists specifically trained to carry out these tasks.

That is why TECH has designed this Postgraduate Diploma in English Legal Translation and Interpreting, a course that includes the necessary content for graduates to acquire all the knowledge that will allow them to meet the professional demand of the field. Thanks to the program, you will be able to improve and expand your skills in relation to the language and its culture: advanced English grammatical and lexical revision and consolidation, reading comprehension and written expression improvement and language feature analysis according to context. It also delves into bilateral interpreting and legal and socio-economic translation, essential and valuable aspects for any specialists' profile in this area.

It is a 100% online course, spread over six months, which includes 450 hours of the best and most updated content. Furthermore, being designed by experts in the field gives it a realistic and critical character, which will be reflected in the high quality and completeness each module presents. Finally, graduates will have access to the virtual classroom 24 hours a day, which will allow them to organize the academic experience in a totally personalized way.

This **Postgraduate Diploma in English Legal Translation and Interpreting** contains the most complete and up-to-date program on the market. Its most notable features are:

- ♦ Practical cases presented by experts in English philology and interpreting
- ♦ The graphic, schematic, and eminently practical contents with which they are created, provide exhaustive and practical information on the disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

Going deeper into the concepts and the differentiation between legal, judicial and certified translation will help you carry out each task in a specific and specialized manner based on the requirements of the area"

“

In this Postgraduate Diploma, you will find sections exclusively devoted to the simulation of legal and judicial translation commissions directly from Spanish to English and vice versa”

The program's teaching staff includes professionals from the sector who contribute their work experience to this training program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive training programmed to train in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.

This course will give you the keys to knowing the documentation sources and resources that will facilitate your tasks as a translator and interpreter in the legal field.

Delve into the theoretical and practical foundations of sworn translation and learn in detail the current governmental regulations by enrolling in this course.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

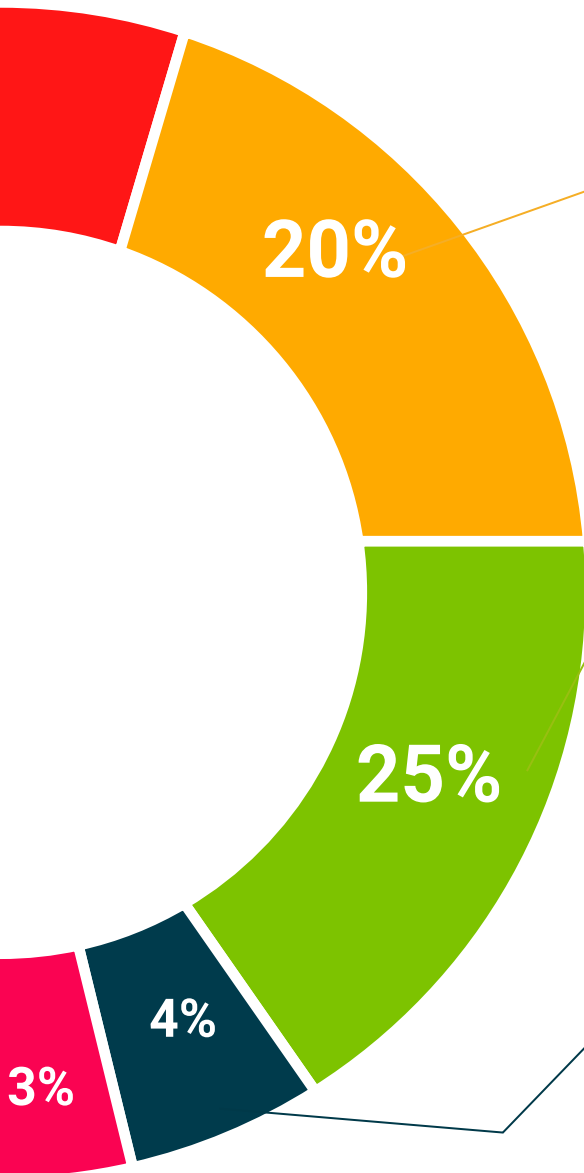

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
