# Introduction

Religion is part of the daily life of the vast majority of society. In the case of Catholicism, it is represented as one of the disciplines with the largest number of followers worldwide, influencing the social and cultural behavior of parishioners, including children. It not only seeks to lavish spirituality, but also to provide answers to a myriad of questions related to life and death, something that, if inculcated from childhood, motivates the development of philosophical thinking that will positively influence the personal and social growth of the individual. For this reason, TECH has launched a comprehensive program focused on the teaching Catholic Religion in Pre-School and Primary Education. It is a 100% online experience that will give you the keys to design dynamic and multidisciplinary teaching plans to bring the word of God to the school in an effective way.

“

*A program at the forefront of teaching to transmit Catholicism, its culture and values to children and to motivate them to faith and spirituality”*

Catholicism is, today, one of the most important religions worldwide. Its split from Christianity, as well as the different expressions that have emerged from its practice have determined a significant cultural wasteland, which has been carried over centuries to the present day, contributing very important aspects to the daily life of its parishioners: norms, customs, traditions, etc. From a philosophical point of view, religion goes beyond the belief in a superior being or an institution, since, through spirituality, it seeks to answer questions related to life and death, motivating a holistic thinking that generates a common social conscience through worship and the feeling of veneration towards the divinity.

For this reason, and because of the values it represents as a whole, instilling the foundations of this doctrine in the youngest children has become an essential tool to give continuity to religious culture, which is why TECH has considered it necessary to develop this program. This program includes the most innovative and effective educational guidelines for the teaching of Catholicism at Pre-School and Primary levels. Through 600 hours of the best theoretical, practical and additional content, the specialist will be able to delve into the intricacies of teaching through the knowledge that gives name to the religious fact in different cultures, focusing on its social, ethical and moral influence. In addition, it focuses on the transmission of the Christian message to the youngest, through the educational guidelines that are having the best results in the current school environment.

This Postgraduate Diploma has been designed by a group of professionals of the highest level versed in Catholic teaching, who have worked intensively to develop not only the syllabus, but dozens of hours of additional resources so that the graduate can expand each section of it in a personalized way: detailed videos, research articles, additional readings, images, news, exercises and much more! Everything will be available in a state-of-the-art Virtual Campus, which can be accessed from any device with an internet connection. In this way, the specialists will be able to work on perfecting their teaching skills from wherever and whenever they want, without schedules or face-to-face classes, and with faith as the only limit.

This **Postgraduate Diploma in Teaching Catholic Religion in Pre-School and Primary School** contains the most complete and up-to-date program on the market.

The most important features include:

- ◆ The development of case studies presented by experts in the teaching of Catholic Religion in pre-school and primary school
- ◆ The graphic, schematic and eminently practical content of the system provides rigorous and practical information on those disciplines that are essential for professional practice
- ◆ Practical exercises where self-assessment can be used to improve learning
- ◆ Its special emphasis on innovative methodologies
- ◆ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

*You will work intensively in the knowledge of the best educational strategies to inculcate the Christian message in children and adolescents from the ground up"*

“

*A unique opportunity to get up to date with the current theological language in a way that combines the traditional guidelines, adapting the message in a dynamic and multidisciplinary way”*

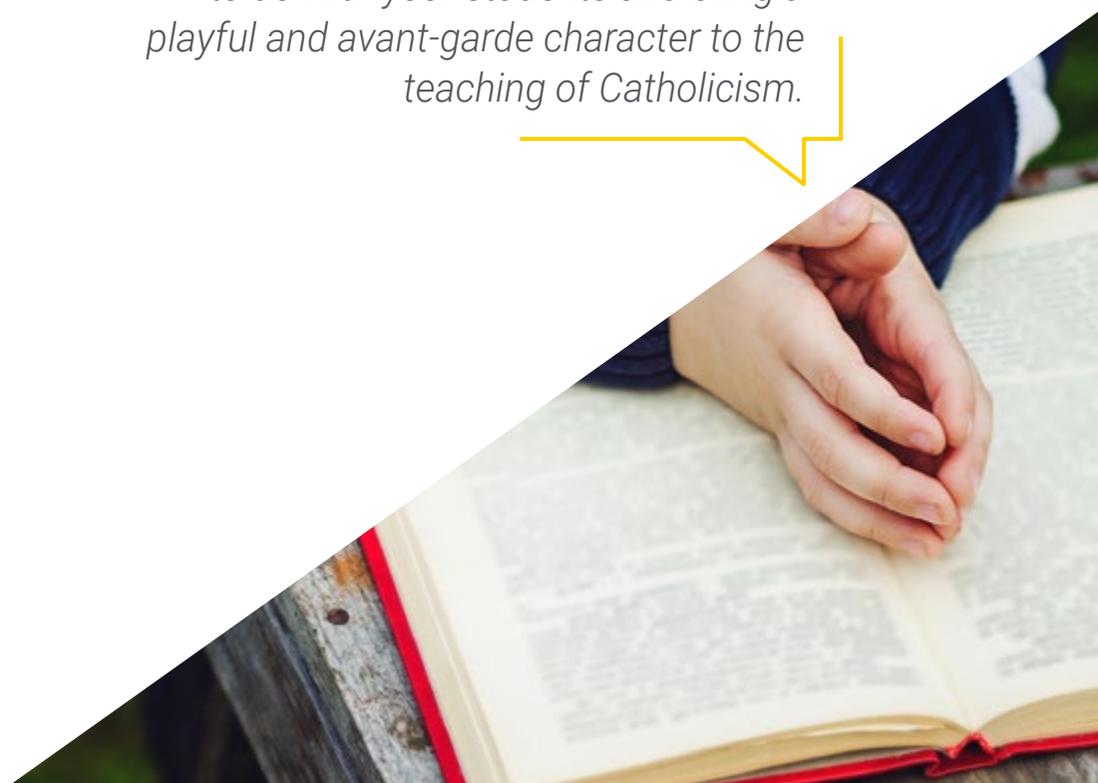

The program's teaching staff includes professionals from the sector who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the educational year. For this purpose, the students will be assisted by an innovative interactive video system created by renowned and experienced experts.

*The program includes a specific module dedicated to pedagogy and didactics of religion in today's academic environment, so that you can update yourself regarding to the Curriculum of the area.*

*You will have access to 600 hours of the best theoretical, practical and additional content, in which you will find exercises to do with your students and bring a playful and avant-garde character to the teaching of Catholicism.*

# 02 Objectives

In general terms, the teaching of religion is currently experiencing a bad moment, due to the lack of support from institutions and the decrease in the number of parishioners. For this reason, TECH has developed this Postgraduate Diploma with the aim of providing graduates with the latest and most effective information that will allow them to revolutionize the teaching of Catholicism through state-of-the-art teaching plans that convey the message of this doctrine to children in such a way that they not only understand it, but also feel interested in continuing to learn about its intricacies.

“

*This Postgraduate Diploma also includes a specific section dedicated to research in teaching and Catholic doctrine, so that you can implement the best strategies in your practice”*

# Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

*Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"*

## Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

*At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"*

*You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.*

*The student will learn to solve complex situations in real business environments through collaborative activities and real cases.*

### A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

## Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

*In 2019, we obtained the best learning results of all online universities in the world.*

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

*Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.*

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

#### Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

#### Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

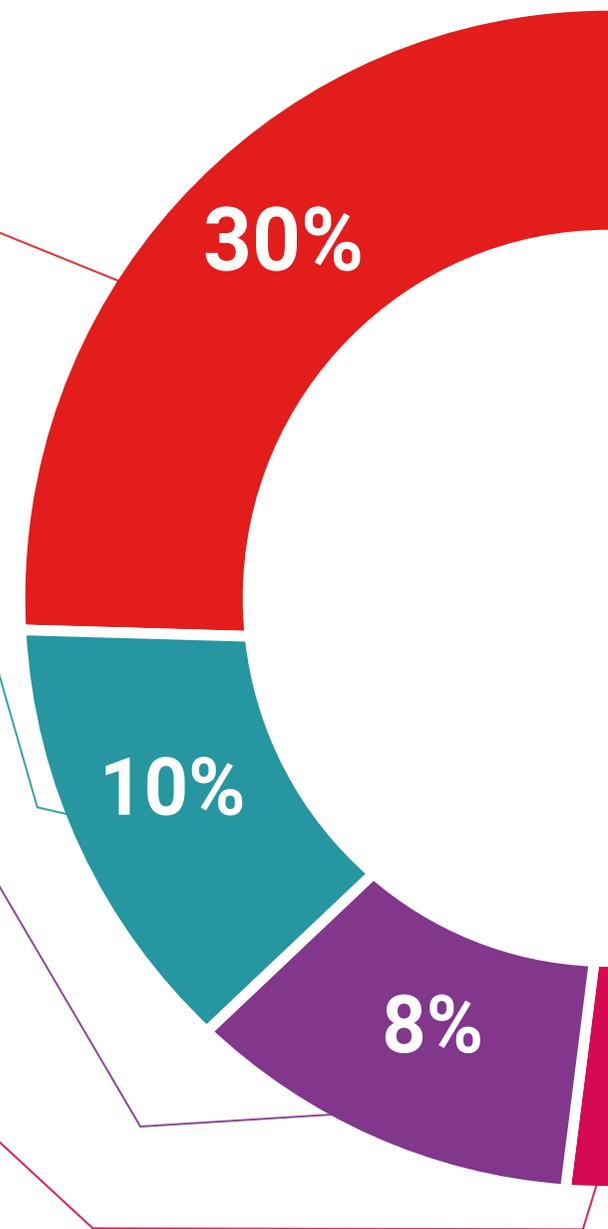

#### Practising Skills and Abilities

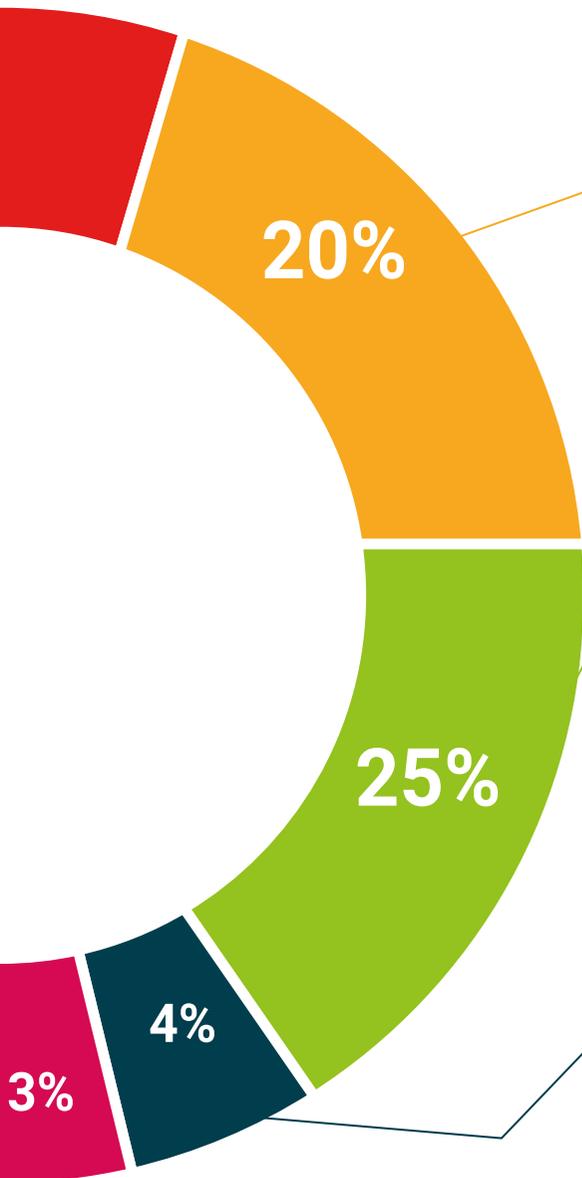

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

#### Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

#### Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

#### Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

#### Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
