Introduction

Knowing and understanding religious scriptures invites philosophers to take a deep analytical dive into religion, since, as Kant and Hegel argued, this is an important aspect of spiritual life. As with art and morality, these authors assumed that the subjective study of the gospel and the individual can become the object of critical reflection. In this sense, the program will provide the appropriate setting for an in-depth study of the Bible and the Word of God, exploring different foundations such as the history of the Hebrew scriptures, the Psalms and the life of Corpus Paulinus, among others. By the end of the program, students will have developed a contemporary vision of the life of Jesus Christ.

“

The Bible can be understood from a philosophical point of view, applying its simple principles to the fundamental questions of humankind”

In this Professional Master's Degree in Divine Revelation, students will be introduced to the study of the Scriptures from a philosophical perspective in order to establish critical thinking that helps to interpret the words and passages described on each page of the "book of books". First, an analysis of the Holy Scriptures will be made, establishing the formal theological bases for reading of the holy text: canonicity, inspiration and inerrancy. This study would be impossible without an understanding of the historical, literary and theological context of patristics, which will be exemplified by means of relevant authors from different periods, distributed in: apostolic fathers, apologists, the beginnings of Theology, the Golden Age of Eastern and Western Patristics, and the final period.

What is more, the study of the Gospel of St. John has initiated an entire debate in the community, since it not only expresses the same historical basis as the others, it also places special emphasis on the divine nature of Jesus Christ. Thus, addressing his words in this program will help students develop their ability to synthesize and structure his teachings disseminate them verbally and in writing.

The Epistle to the Hebrews and the Catholic Epistles are another of the strong points of this program, as they have already become a reference point for understanding the difficulties experienced by Christian groups in reflecting on their own identity and expression. Knowledge of these texts will enable finding new philosophical sources to help clarify the conflict between self-identity and ecclesial community.

All the content included in this Professional Master's Degree in Divine Revelation has been elaborated based on the methodological, epistemological and theological hermetic foundations. Student will be able to answer modern questions and concerns while, at the same time, being able to present conclusions about them. That is why the program represents an excellent opportunity for those who wish to have an active presence in academics, education or research.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
