Introduction

Dogmatic Theology has become the basis for the study of the "Science of God", taking references from Christian doctrine for the scientific exposition of the statements to be developed. For this reason, and due to the complexity of this trend, it is essential to have students who understand the fundamentals and basic contents of the Christian faith and the challenges it faces in the modern world. This program will provide students with the necessary context, ideas and perspectives that will allow them to understand the nature of theology in order to generate a point of view that seeks to establish a dialogue with today's society, especially with urban culture.

“

Delve into the assumptions and sources of theological knowledge to develop critical thinking in the face of Christian discourse"

In this Professional Master's Degree in Dogmatic Theology there will be a group of experts trained to provide all the criteria that allow students to update in this area of study in a comfortable way. For this purpose, the program has a rich study plan that will begin by exposing the historical and epistemological configuration of Theology as a science. At this point, the justification of the documentation that the doctrine takes to validate its statements will be presented.

Throughout the program, Fundamental Theology will be presented as a specialized part of this science that tries to understand the mystery of God in its totality. In this way, the Christian message will be explained, presenting the reasons that justify the yes of faith to the divine revelation, to the person and to the message of Jesus Christ.

Thanks to the above, the student will begin to develop critical thinking to explain the formal theological principles involved in the scientific reading of Sacred Scripture: canonicity, inspiration and inerrancy. As a result, they will be able to generate a dialogue between the approaches of the church and today's society. At the end of the program, students will have acquired specific knowledge that will allow them to base their ideas on Christian hope on the eschatological notions that come from Sacred Scripture, especially from the affirmations on the resurrection of Christ.

In this way, the student will be able to answer modern questions and concerns and, at the same time, will be able to present conclusions about them. For this reason, the program represents an excellent opportunity for those who wish to have an active presence in the academic, teaching or research field.

This **Professional Master's Degree in Dogmatic Theology** contains the most complete and up-to-date program on the market. Its most notable features are:

- ♦ The development of case studies presented by experts focused on Dogmatic Theology
- ♦ The graphic, schematic and eminently practical contents of the book provide epistemological and practical information on those disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Special focus on innovative methodologies for the study of Dogmatic Theology
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

Justifies the hope of the ecclesial community by valuing human life in its historical dimension on the basis of the Christian doctrine on eternal life"

It develops a sensitivity to the great theological and spiritual questions that are manifested in the great theological tradition of the Church"

With this program, you will gain an understanding of the importance of Mary of Nazareth in the mystery of Christ and the church.

Debate and argue about contemporary views on creation, man and sin.

The program's teaching staff includes professionals from the sector who contribute their work experience to this training program, as well as renowned specialists from leading societies and prestigious universities.

Its multimedia content, developed with the latest educational technology, will allow the professional a situated and contextual learning. In other words, a simulated environment that will provide immersive education programmed to prepare for real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the student will be assisted by an innovative interactive video system created by renowned and experienced experts.

02 Objectives

To ensure the development of the competencies of Dogmatic Theology students, TECH has created this program, which will provide the necessary context and the ideas and perspectives that will help to understand the character of theology. In this way, they will be able to become professionals and philosophers capable of responding to modern concerns and developing a research plan that deepens the message set forth in the Holy Scriptures.

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

Our program prepares you to face new challenges in uncertain environments and achieve success in your career”

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
