Introduction

What do Mozart's Requiem and Broadway musicals have in common, and La Traviata and La Casa de Bernarda Alba? Quite simple: all these works are part of the wide cultural range that makes up music and the performing arts. Theater, dance, and musical harmony in its different genres make up a very broad field of study, not only because of its long and extensive history, but also because of its multiple forms and adaptations: to literature, cinema, shows, etc. For this reason, bringing together in a single program the information related to this field has been a real challenge for TECH who, together with a team of experts, have achieved it thanks to a hard work of research and educational adaptation. In this way, students will be able to explore the different fields of musical aesthetics and the performing arts through 1,500 hours of theoretical-practical and additional 100% online content.

“

Would you like to specialize in the field of Music and Performing Arts? Then this Professional Master's Degree and its 1,500 hours of theoretical and practical content are perfect for you. Are you going to let this amazing opportunity pass by?"

Although there is no reliable data to confirm the origin of music and dance, numerous investigations have placed it in prehistoric times, when people danced and sang around the fire until exhaustion for spiritual and religious purposes. Throughout history, these two artistic expressions have evolved each on their own, as well as together, giving rise to theater, musicals, different genres and the many manifestations that make up the cultural spectacle that exists today. Vivaldi, Beethoven, Mozart and the thousands of unknown composers who preceded them were responsible for laying the foundations thanks to which Tom Hooper and Julie Taymor were able to develop Cats and The Lion King, respectively.

And so that graduates interested in this field can follow in their footsteps and contribute to cultural development, TECH and its team of experts have designed this Professional Master's Degree in Music and Performing Arts. It is a multidisciplinary and 100% online program thanks to which the graduate will travel through centuries of history, soaking up the characteristics of each genre and the most representative authors and composers of each era. In addition, they will be able to work intensively on perfecting their skills related to singing, rhythmic practice and musical aesthetics, focusing on the organization of events and the direction of musicals, plays and operas. In this way, you will raise your cultural knowledge in this field to the highest level, being able to apply it both in the educational and research sectors and, of course, in stage performances.

All this, 100% online and over twelve months, during which you will have 1,500 hours of the best theoretical and practical content, and, in addition, this content will be presented in different formats: detailed videos, research articles, complementary readings, self-knowledge exercises, case studies, news, dynamic summaries and much more! In this way, the student will be able to contextualize the information in the syllabus and delve in a personalized way into its different sections. In addition, you will not have to follow a strict timetable, but will be able to design your own, allowing you to adapt the academic experience not only to your requirements, but also to your absolute availability.

This **Professional Master's Degree in Music and Performing Arts** contains the most complete and up-to-date program on the market. The most important features include:

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career”*

The case method has been the most widely used learning system among the world's leading Humanities schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

06 Certificate

The Professional Master's Degree in Music and Performing Arts guarantees students, in addition to the most rigorous and up-to-date education, access to a Professional Master's Degree issued by TECH Technological University.
