01

Introduction

The advanced use of TypeScript in front-end web development provides a robust type system to detect errors early during the development phase, improving code quality and reducing the likelihood of runtime errors. In addition, the use of advanced TypeScript features, such as conditional types, advanced generic types, and enhanced type inference, allow more expressive and maintainable code to be written. This translates into greater productivity, as it makes it easier to understand and modify code over time. Therefore, TECH has developed this comprehensive 100% online program, based on the Relearning methodology, a revolutionary learning method that reduces the long hours of study and memorization.

```
erator):  
  mirror to the selected object""  
  object.mirror_mirror_x"  
  "Mirror X"  
  method  
  (cls, context).  
  ...
```

“

Thanks to this 100% online Postgraduate Certificate, you will be able to use TypeScript in front-end web development to build robust, scalable and easy to maintain applications in modern development environments"

The advanced use of TypeScript in front-end web development provides an additional layer of security and robustness to the code, thanks to its static typing system that helps detect errors at compile time. It also offers advanced features, such as conditional types, enhanced type inference and decorators, which allow developers to write more expressive, modular and scalable code.

As a result, this Postgraduate Certificate is designed to provide professionals with the skills necessary to effectively integrate TypeScript into a variety of work environments. As a result, computer scientists will acquire a thorough mastery of the advanced types and utilities offered by TypeScript, enabling them to write more secure and scalable code.

Crucial aspects such as advanced error handling and debugging will also be addressed, allowing developers to identify and solve problems more efficiently. Advanced concepts such as decorators and metaprogramming will also be explored, offering powerful tools to improve the modularity and extensibility of applications.

Finally, time will be spent optimizing TypeScript code for production deployment, as well as developing reactive front-end applications, preparing graduates to meet the real-world challenges of modern web development. In addition, best practices will be implemented to improve the performance and scalability of projects, as well as using modern tools and techniques to create interactive and responsive user interfaces. With a practical and project-oriented approach, this program will provide experts with the necessary skills to excel in the field of front-end web development.

In this sense, TECH has implemented a 100% online and totally flexible academic program, to the point that students will only need an electronic device with an Internet connection to access the teaching materials. At the same time, you will benefit from the revolutionary Relearning methodology, which consists of the reiteration of fundamental concepts for an optimal and organic assimilation of content.

This **Postgraduate Course in Using Advanced TypeScript in Front-End Web Development** contains the most complete and up-to-date educational program on the market. The most important features include:

- ♦ The development of practical cases presented by experts in Using Advanced TypeScript in Front-End Web Development
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning.
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

Using TypeScript will offer you seamless integration with popular web development tools, such as React, Angular and Vue, benefiting from the additional advantages that TypeScript provides"

“

Bet on TECH! You will delve into the concepts of metaprogramming, optimizing TypeScript code for production and developing reactive frontend applications"

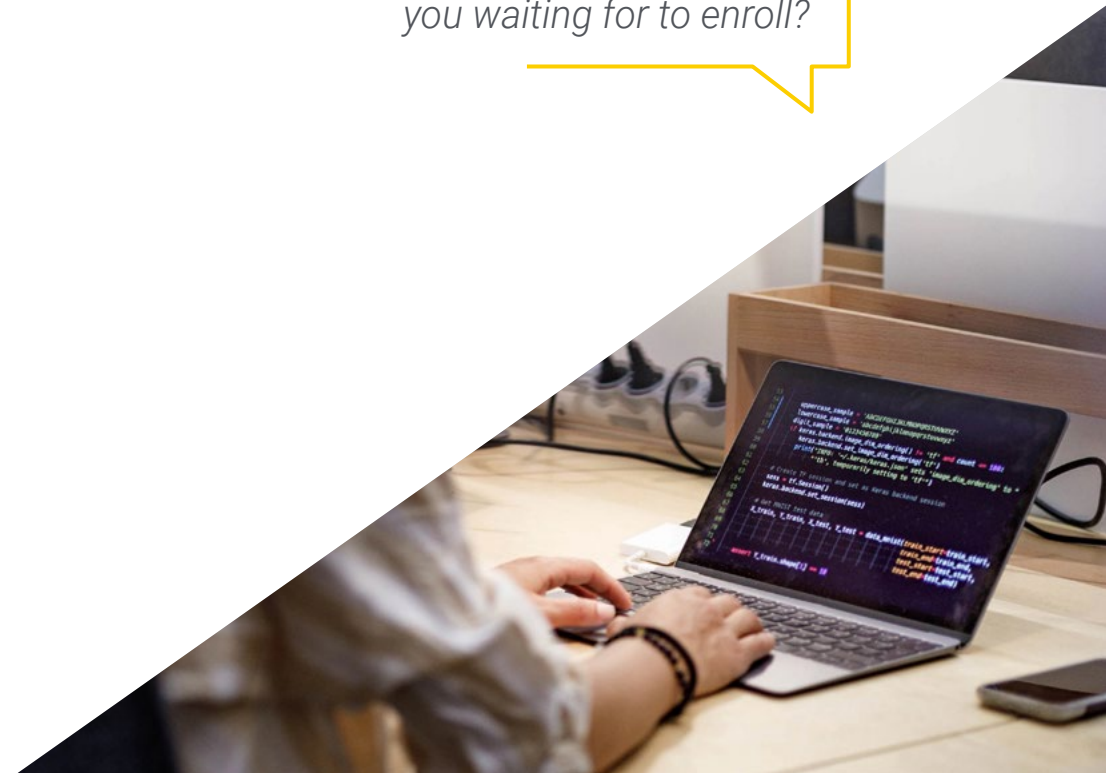

The program's teaching staff includes professionals from the field who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, the students will be assisted by an innovative interactive video system created by renowned and experienced experts.

You will apply advanced types and utilities in TypeScript, enabling students to write more robust and secure code, all through the best teaching materials, at the forefront of technology and education.

You will master advanced error handling and debugging techniques, equipping you with the skills necessary to effectively identify and resolve problems. What are you waiting for to enroll?

02 Objectives

This Postgraduate Certificate aims to provide professionals with a deep and practical understanding of advanced TypeScript tools and techniques for front-end web development. In this way, computer scientists will acquire skills to integrate TypeScript effectively in different working environments, master the use of advanced types and utilities, and learn how to integrate it with the most popular front-end frameworks. In addition, graduates will be specialized in advanced error handling and debugging, the application of decorators and metaprogramming concepts, as well as in optimizing TypeScript code for production.

“

The goal of this comprehensive academic program is to equip you with the skills and knowledge necessary to develop high quality, secure and efficient front-end web applications"

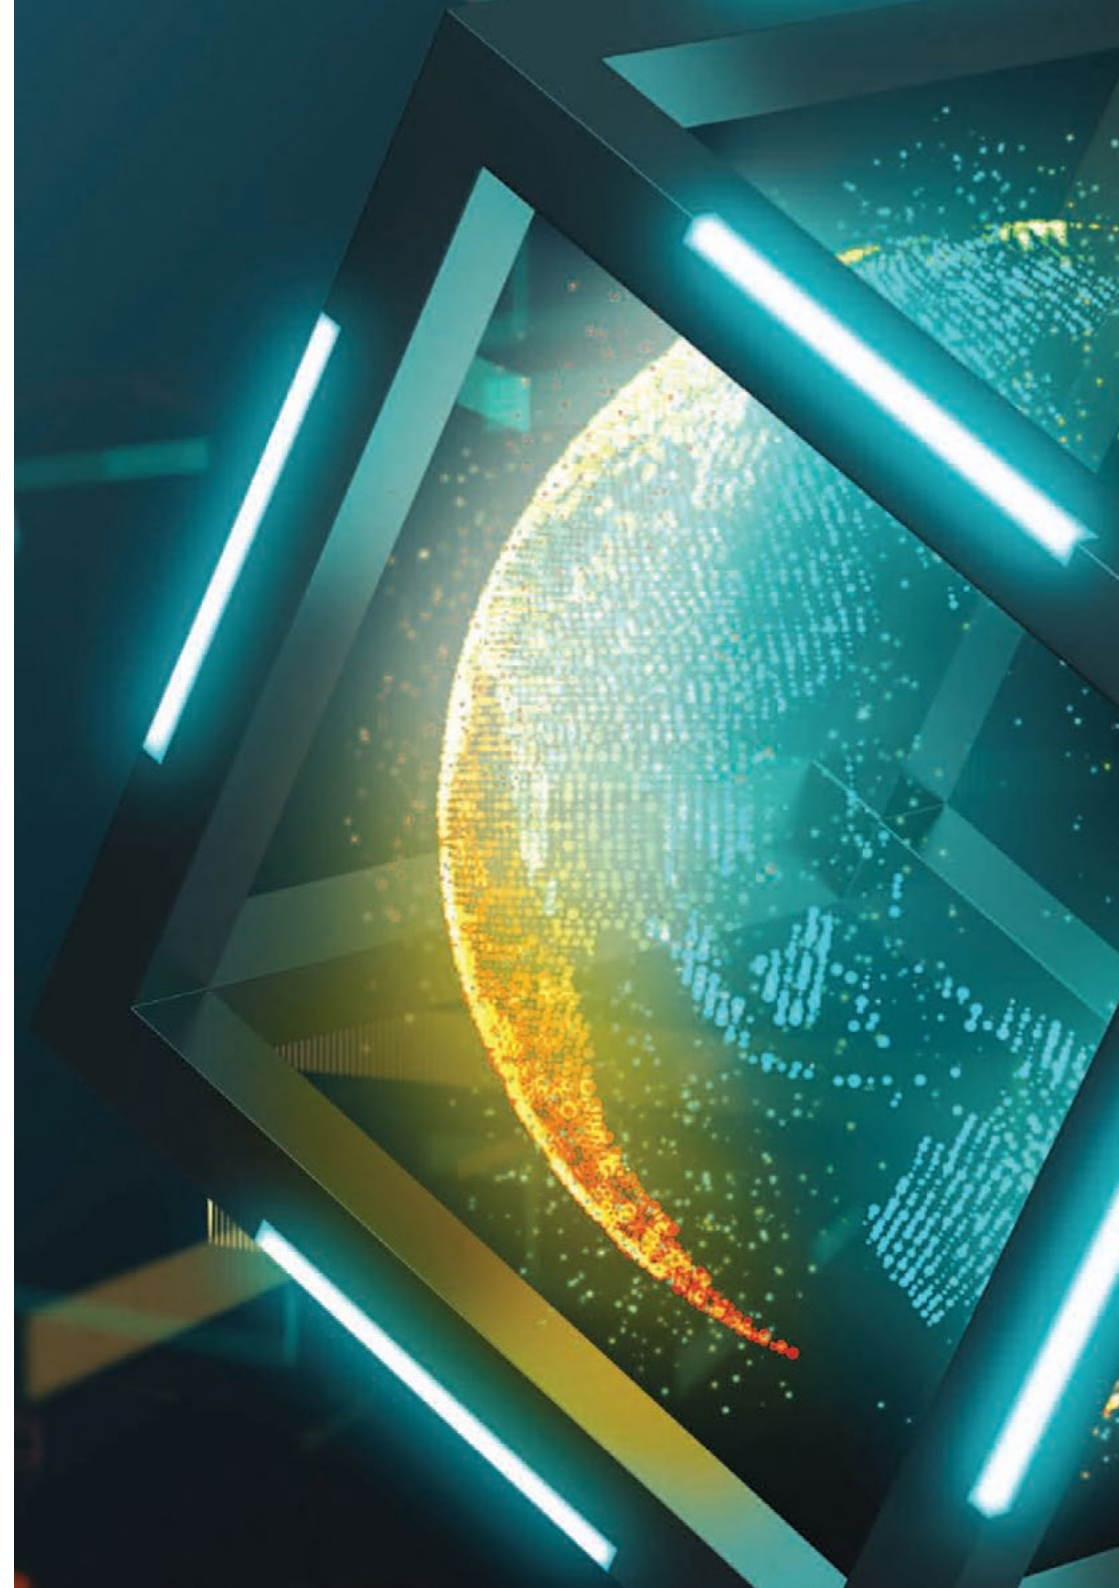

General Objective

- ♦ Equip students with the necessary skills to integrate TypeScript into different work environments

“

Upon completion of this Postgraduate Certificate, students will be able to meet the challenges of today's web development and create robust and high performance front-end solutions. With all TECH's quality guarantees!"

Specific Objectives

- ♦ Master advanced types and utilities in TypeScript
- ♦ Integrate TypeScript with popular front-end frameworks
- ♦ Implement advanced error handling and debugging
- ♦ Apply decorators and metaprogramming concepts
- ♦ Optimize TypeScript code for production
- ♦ Develop reactive front-end applications with TypeScript

03

Course Management

The faculty behind this Postgraduate Certificate is composed of highly qualified professionals with extensive experience in the field of web development and advanced use of TypeScript. In fact, these mentors are committed to providing graduates with quality knowledge, providing solid theoretical knowledge and industry-relevant hands-on experience. In addition, they are abreast of the latest trends and developments in the field, allowing them to offer students an up-to-date and relevant preparation for the demands of a constantly evolving job market.

A close-up photograph of a person's face, focusing on their eyes and nose. They are wearing dark-rimmed glasses. The reflection in the left lens shows lines of computer code in various colors (green, blue, white) on a dark background. The background of the photo is a light green wall. The image is partially obscured by a teal geometric overlay on the right side of the slide.

“

The teachers have been carefully selected by TECH according to their experience and knowledge in the field, being professionals with exceptional skills in teaching and transmitting knowledge"

Management

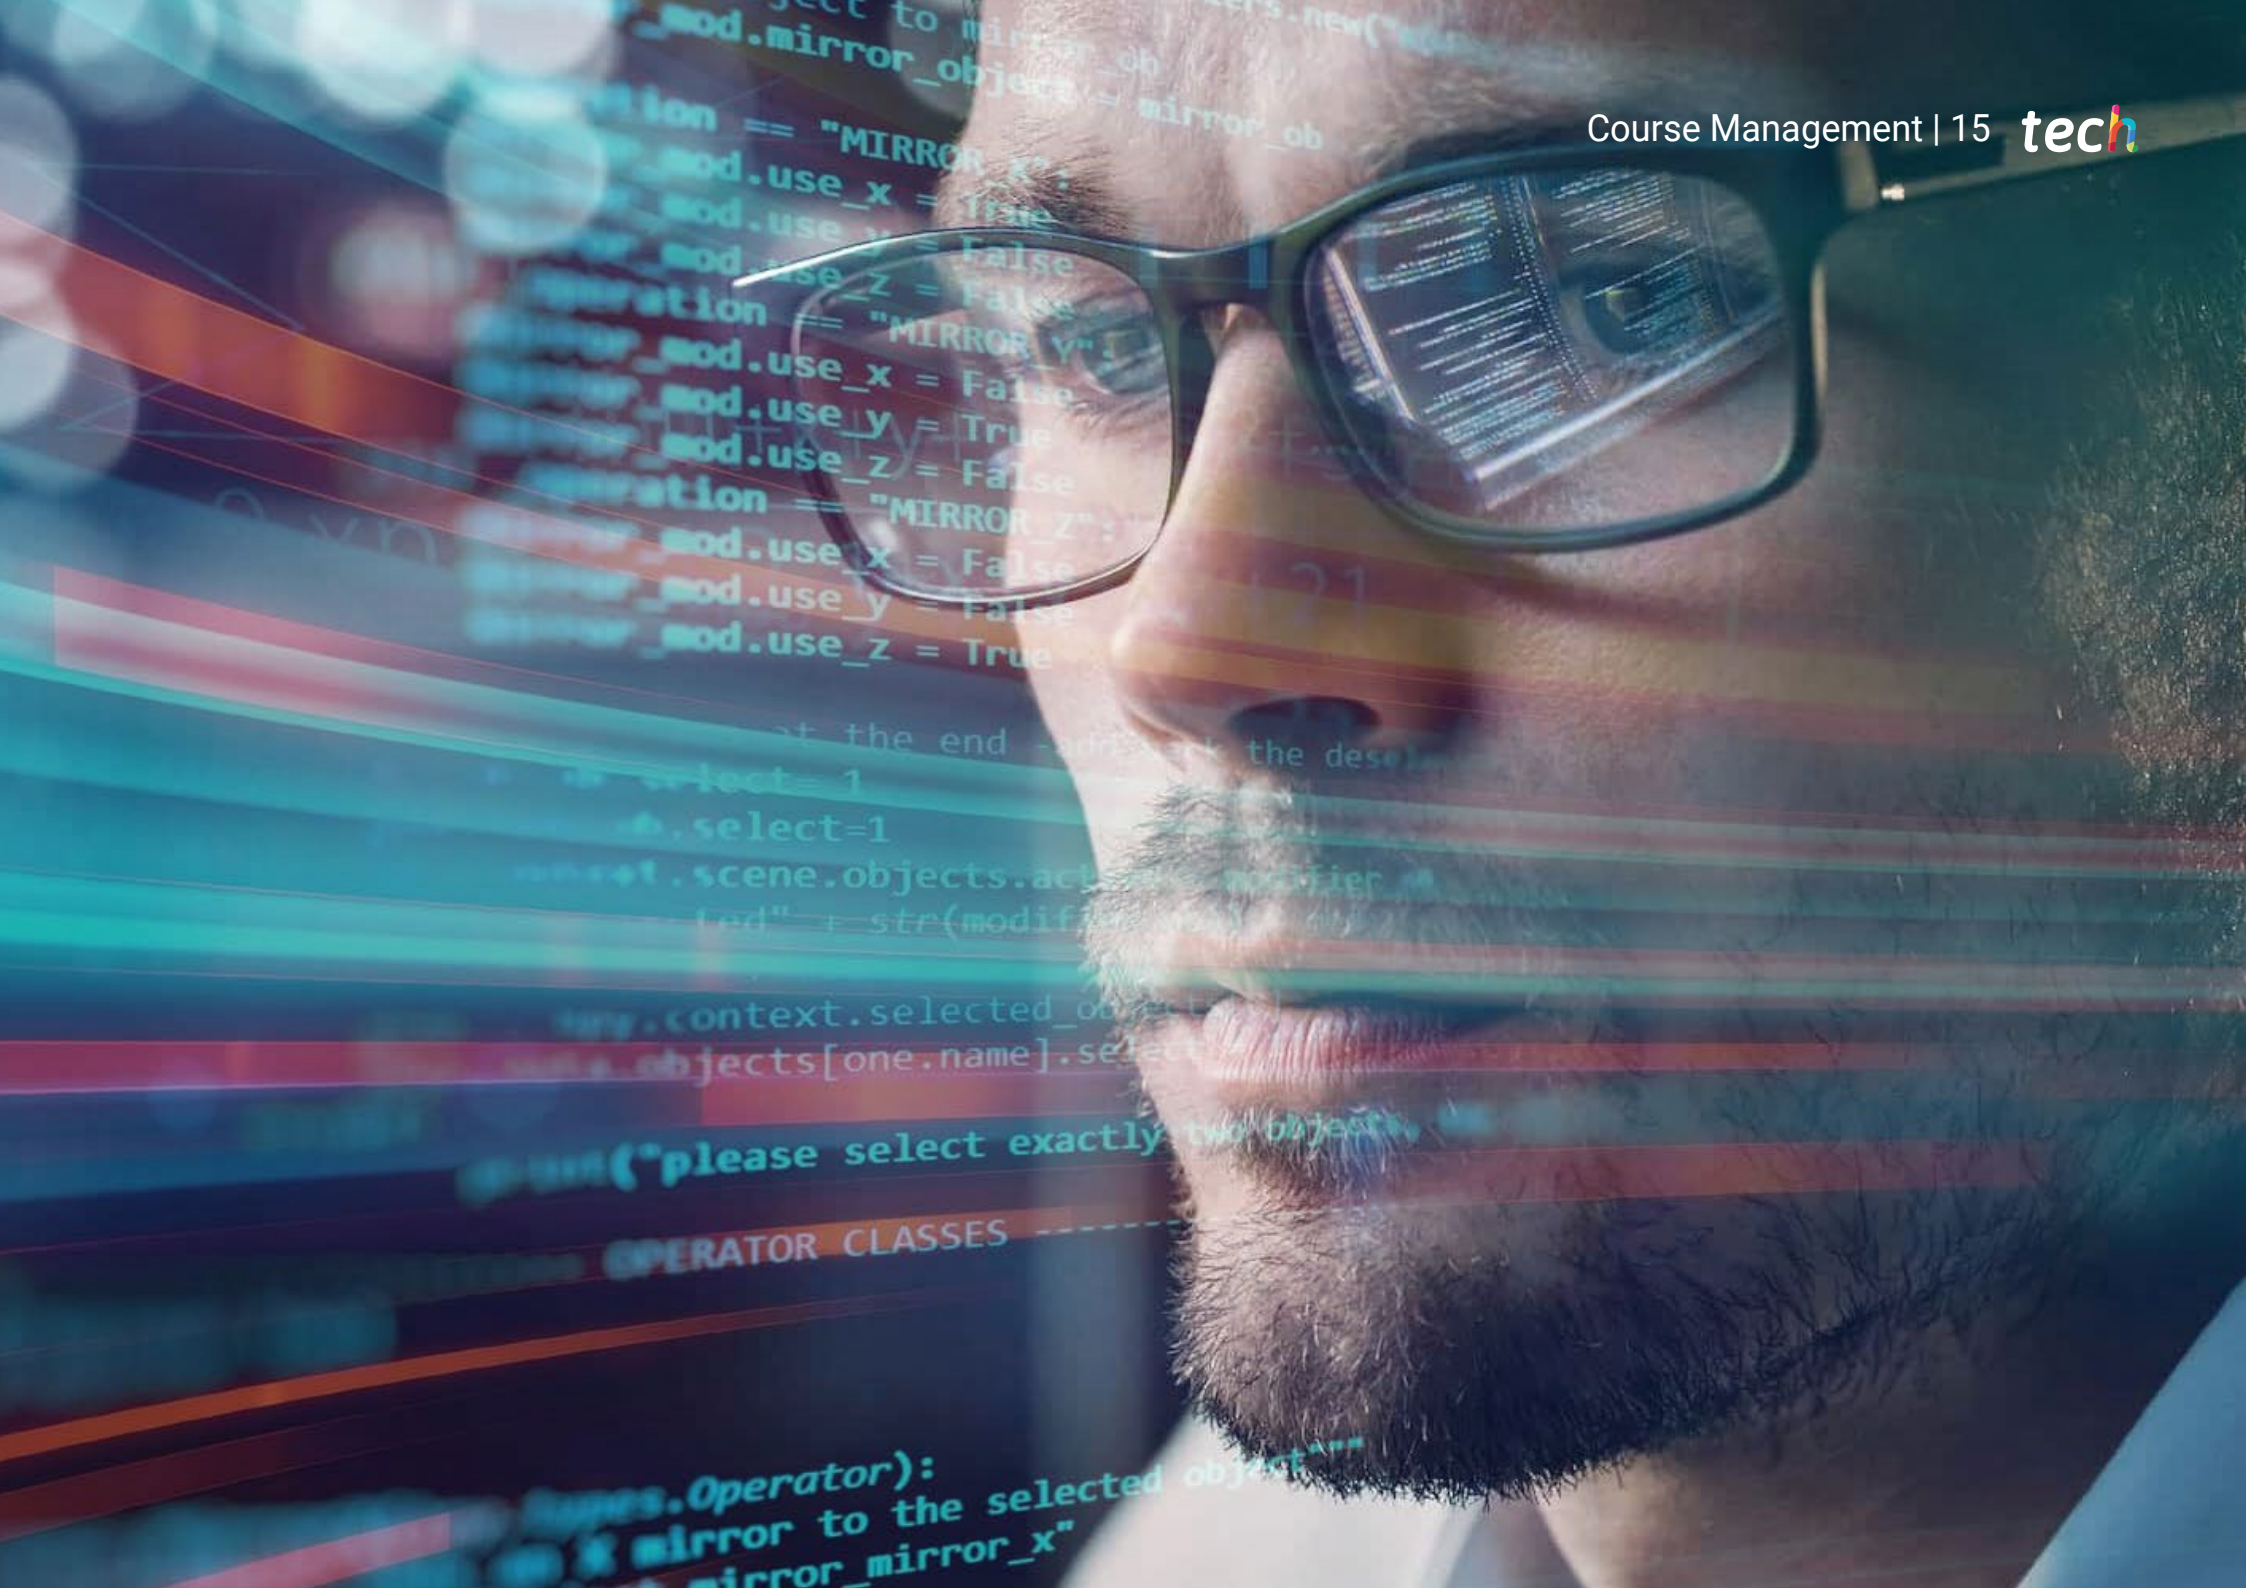

Mr. Utrilla Utrilla, Rubén

- Technology Project Manager at Serquo
- Full-Stack Developer at ESSP
- Junior Full-stack Developer at Sinis Technology S.L.
- Junior Full-stack Developer at Escuela Politécnica Cantoblanco Campus
- Master in AI and Innovation by Founderz
- Degree in Computer Engineering from Universidad Autónoma de Madrid
- Google Cloud Developer course in Google Academic Program

Professors

Ms. Del Vado Puell, Andrea

- Web Developer at Serquo
- Web Developer at Ribera Salud
- Software Developer at FutuRS
- Master's Degree university in Web Services and Applications Development from the International University of Valencia
- Degree in Computer Engineering from Universidad Complutense de Madrid
- Full Stack Developer MEAN Bootcamp at GeeksHubs Academy
- Full Stack Developer MEAN Certification

04

Structure and Content

The program will cover a wide range of topics, designed to equip professionals with the skills needed to excel in modern web development. From understanding and applying advanced types and utilities in TypeScript, to integrating with popular front-end frameworks, the program will offer a comprehensive approach. In addition, you will delve into advanced aspects such as error handling and debugging, the application of decorators and metaprogramming concepts, as well as optimizing TypeScript code for production.

“

You will develop reactive frontend applications, ensuring that they are prepared to meet the challenges of today's web development and build robust, high-performance solutions"

Module 1. Using Advanced TypeScript in Front-End Web Development

- 1.1. Advanced Types and TypeScript Utilities in Front-End Web Development
 - 1.1.1. Conditional, Mapped, and Utility Types
 - 1.1.2. Advanced Constructs
 - 1.1.3. Design Patterns with Advanced Types
- 1.2. Integrating TypeScript with Frameworks in Front-End Web Development
 - 1.2.1. Using TypeScript in React, Vue, and Angular
 - 1.2.2. Component Typing and Creation
 - 1.2.3. Strategies for Migrating from JavaScript to TypeScript
- 1.3. Error Handling and Debugging with TypeScript in Front-End Web Development
 - 1.3.1. Advanced Error Handling Techniques
 - 1.3.2. Environment Configuration for Efficient Debugging
 - 1.3.3. Use of Source Maps and Inspection Tools
- 1.4. Decorators and Metaprogramming with TypeScript in Front-End Web Development
 - 1.4.1. Decorator Applications and Limitations
 - 1.4.2. Metaprogramming Patterns and Reflection
 - 1.4.3. Practical Application of Front-End Development
- 1.5. Code Optimization with TypeScript in Front-End Web Development
 - 1.5.1. Tools for Analysis and Optimization
 - 1.5.2. Techniques to Reduce Bundle Size
 - 1.5.3. Strategies to Improve Execution Time
- 1.6. Testing and Code Quality with TypeScript in Front-End Web Development
 - 1.6.1. Testing Frameworks Compatible with TypeScript
 - 1.6.2. Strategies for Component and Service Testing
 - 1.6.3. Maintaining a Healthy Code Base
- 1.7. Typescript in Server-side Applications with Node.js in Front-End Web Development
 - 1.7.1. Node.js Project Configurations with Typescript
 - 1.7.2. Typescript in RESTful and GraphQL APIs
 - 1.7.3. Security and Error Handling

- 1.8. Scalable Application Architectures with Typescript in Front-End Web Development
 - 1.8.1. Designing Clean and Scalable Architectures
 - 1.8.2. Microservices and TypeScript
 - 1.8.3. Design Patterns and SOLID
- 1.9. Deployment and Monitoring of TypeScript Applications in Front-End Web Development
 - 1.9.1. Tools and Services for Efficient Deployment
 - 1.9.2. Performance Monitoring and Error Detection
 - 1.9.3. Specific Optimizations for TypeScript Applications
- 1.10. Future of TypeScript in Front-End Web Development
 - 1.10.1. Language Evolution and Upcoming Features
 - 1.10.2. Community, Resources and Continuous Learning
 - 1.10.3. Impact on the Front-End Development Ecosystem

“

The comprehensive approach of this Postgraduate Certificate will enable you to acquire the skills and knowledge necessary to excel in the competitive field of front-end web development”

05 Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

The case method has been the most widely used learning system among the world's leading Information Technology schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the course, students will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

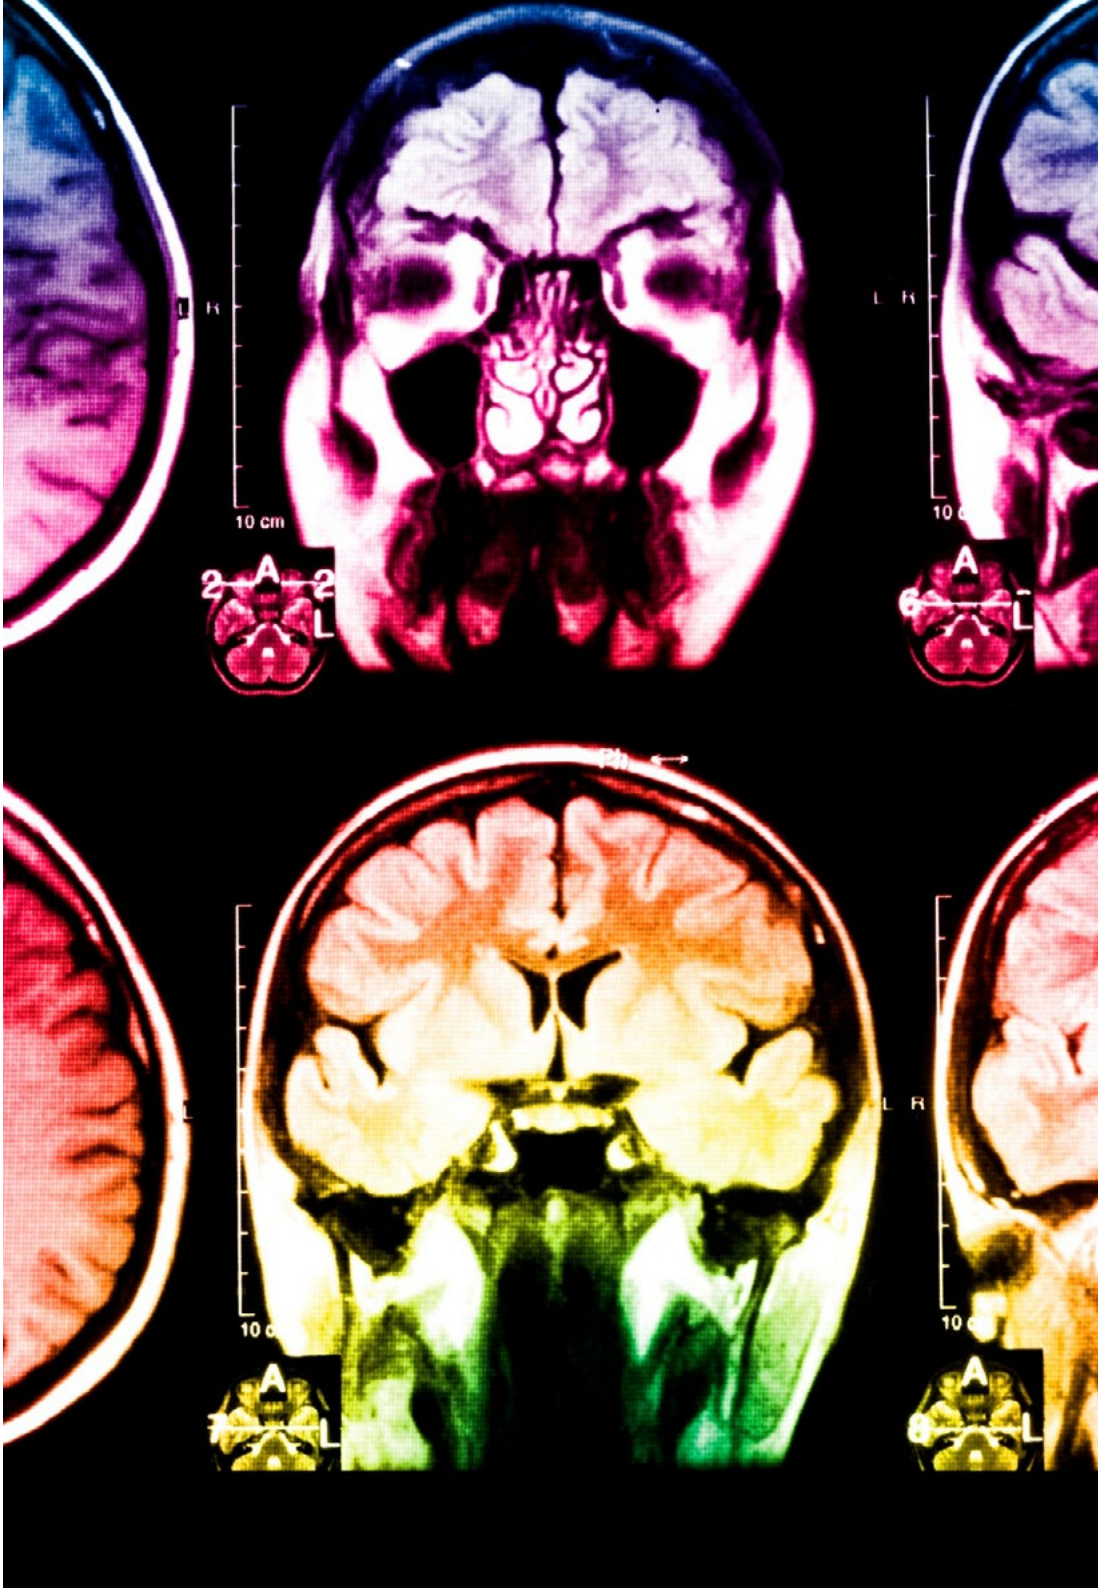

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

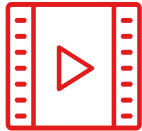

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

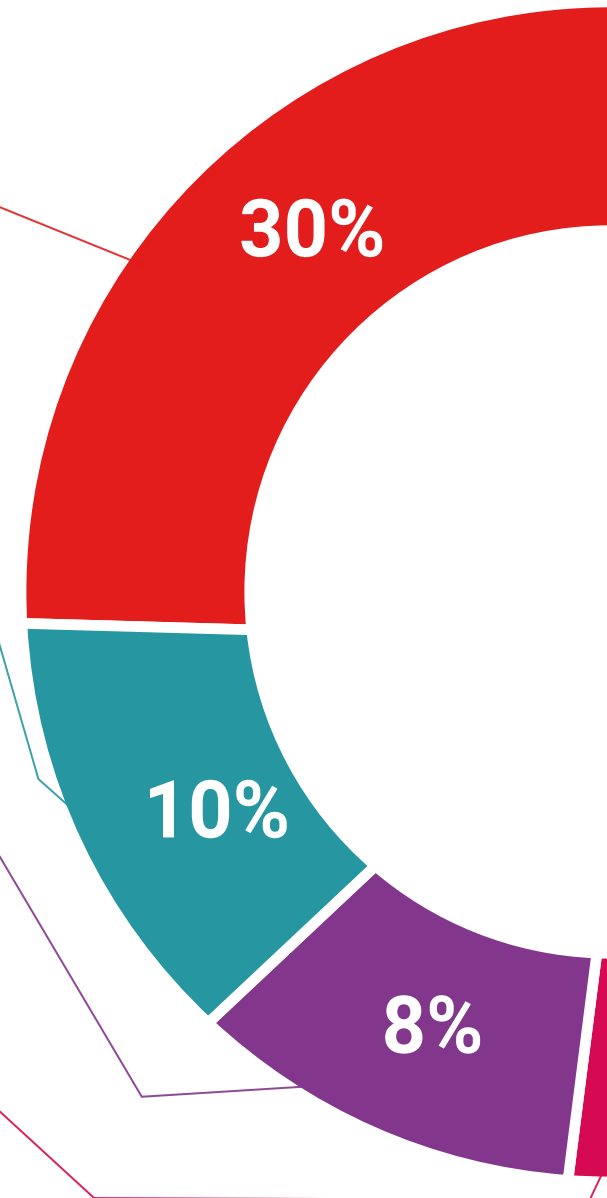

Practising Skills and Abilities

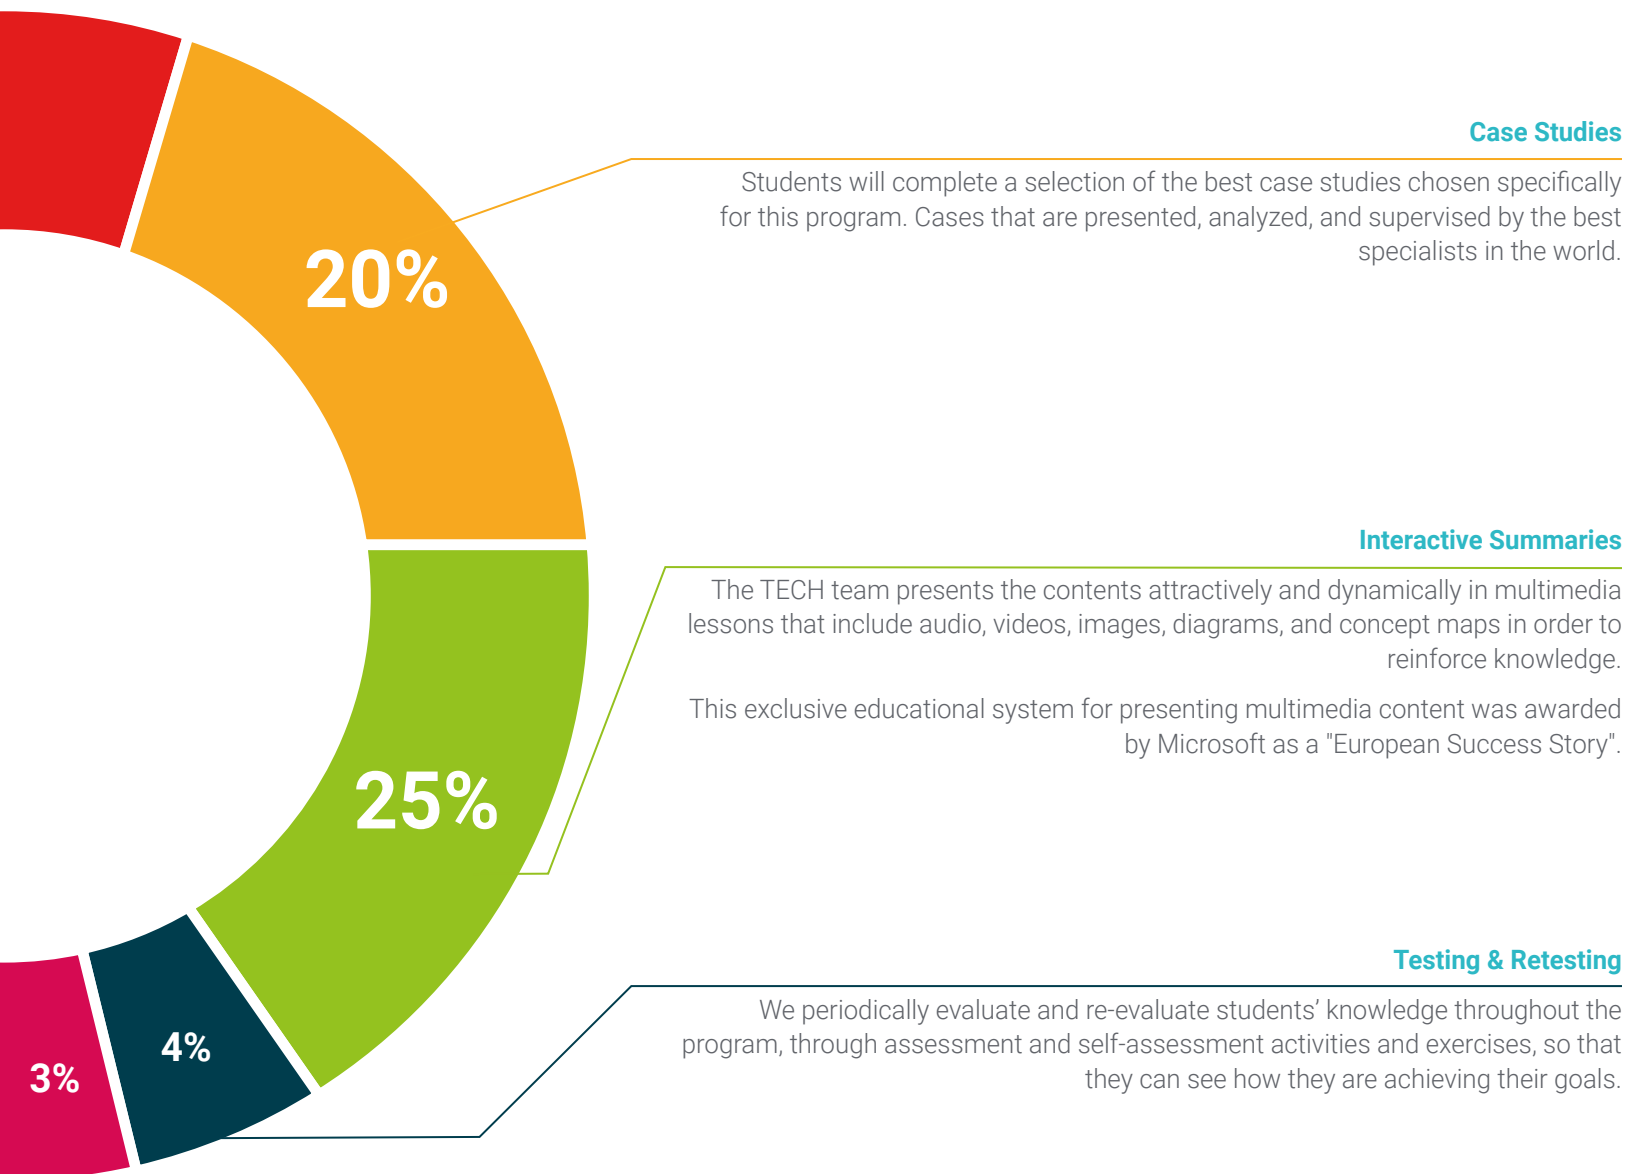

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

06 Certificate

The Postgraduate Certificate in Using Advanced TypeScript in Front-End Web Development guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Postgraduate Certificate in Using Advanced TypeScript in Front-End Web Development** contains the most complete and up-to-date program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations and professional career evaluation committees.
