01 Introduction

The Data Analysis Techniques program is a complete educational program, designed to provide students with the necessary skills to act with the confidence of an expert in data analysis. With the exceptional quality of TECH, the largest Spanish-language university in the online teaching market.

tech 06 | Introduction

This Postgraduate Diploma will give students a complete overview of the latest technologies used in working with Big Data and Artificial Intelligence. A comprehensive compilation of advances, novelties and work tools that will take students through the most intensive course, to prepare them for current star profiles.

Throughout this program, students will learn about everything needed to analyze data with the development of different existing techniques. In addition, TECH will show how to capture data and store it properly in each case.

From the most qualified professors, with the best educational systems and the security and solvency of the best online university of its time.

This **Postgraduate Diploma in Data Analysis Techniques** contains the most complete and up-to-date educational program on the market. The most important features of the program include:

- Practical case studies presented by experts
- The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice.
- Practical exercises where self-assessment can be used to improve learning.
- Its special emphasis on innovative methodologies
- Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- Content that is accessible from any fixed or portable device with an Internet connection

All necessary aspects to use data visualization techniques, in a high-quality course".

Its teaching staff includes professionals from the sector who bring their work experience to this program, in addition to recognized specialists from leading societies and universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive program designed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, the professional will be assisted by an innovative interactive video system created by renowned and experienced experts.

This program has the best educational resources that can be accessed online or downloaded, to make it easier for you to manage your studies and effort.

A highly comprehensive program, created with the objective of delivering the highest quality education, raising our students to the highest level of proficiency.

tech 10 | Objectives

General Objectives

- Analyze the data produced and draw conclusions using statistical tools to make the most appropriate decisions at all times
- Learn the introductory concepts of statistics; statistical reasoning; representing relationships between different variables, among others.
- Acquire in-depth knowledge of the principles of probability that are the basis for inferential statistics, which will allow us to contrast conjectures (hypothesis testing) about what a given population is like.
- Understand information sources and the value they bring to the creation of new innovative business models.
- Know and use statistical tools to solve problems in the Big Data field.
- Know how the combination of all the data flowing through the Internet can be combined in order to define new strategies applicable to different industrial, business, financial sectors, etc., within different fields, such as energy, health, economy or communication.
- Learn the different techniques for data analysis and exploitation and visualization
 and interaction techniques, all closely linked to the role of *Data Scientists* and their
 contribution to the anticipation and vision for the execution of innovation processes
 that allow for efficient changes in organizations.
- Assimilate concepts, techniques, methodologies and knowledge of languages that will be useful to apply in big data mining.
- Further study Artificial Intelligence algorithms and techniques such as decision trees, classification and association rules, neural networks or *Deep Learning*

- Apply Data Mining tools to solve learning problems, interpreting the results obtained, as well as the ability to design an intelligent system capable of inferring new knowledge.
- Understand databases, from traditional to unstructured, where data requiring other types of processing, such as audio or video streams, will be stored.
- Learn about the importance of having cloud computing for processing large volumes of data and how all this *Big Data* can be ingested into tools that allow us to obtain and infer patterns in seemingly unrelated data.
- Delve into the *Hadoop framework* and its file system HDFS (*Hadoop Distributed File System*), which provides tools and techniques for distributed storage and processing of large amounts of data.
- Know how to apply tools for parallel processing: MapReduce, devised by Google, or Spark, now under the auspice of the Apache Software Foundation
- Understand how high-performance, low-latency platforms work for real-time manipulation of data sources that need to respond to service demands operating in the millisecond range.

Module 1. Data Analysis and Interpretation

- Know the different theories for data analysis and interpretation
- Identify the most common descriptors for a dataset
- Understand and evaluate the applicability of different descriptors to an existing dataset
- Know how to carry out hypothesis testing and its applicability to the world of data analysis.
- Learn how to interpret the different existing regression techniques

Module 2. Data Analysis Techniques and Al

- Understand the different techniques for data analysis
- Design joint strategies of statistical and artificial intelligence techniques for the development of descriptive and predictive systems applied to the reality of a dataset
- Understand the operation and characteristics of common mass data processing techniques
- Identify techniques oriented to statistical analysis, artificial intelligence and mass data processing.

Module 3. Data Analysis Tools

- Know the environments most used by Data Scientists
- Know how to process data in different formats from different sources
- Learn from the need to guarantee the veracity of the data as a prior step to its processing
- Identify new technologies as pedagogical tools in the communication of the different business realities.
- Know the latest trends in the creation of intelligent entities based on *Deep Learning* and neural networks.

Module 4. Database Management and Data Parallelization Systems

- Know the artificial intelligence techniques applicable for massively parallelized data processing on a given data set and according to previously defined requirements
- Know how to manage large volumes of data in a distributed manner
- Understand the operation and characteristics of common mass data processing techniques
- Identify commercial and open software tools oriented to statistical analysis, artificial intelligence and mass data processing.

A stimulating journey of professional growth designed to keep you interested and motivated throughout the entire program"

International Guest Director

Recognized as one of the best experts in Data Science by Forbes magazine, Robert Morgan is a distinguished mathematician highly specialized in the field of Computational Statistics. His extensive knowledge in this field has allowed him to be part of international reference institutions, such as the multinational Unilever.

In this way, he has led the Data Science strategy at a global level. In this sense, he has supervised multiple projects that use advanced analysis to optimize the strategic operations of companies. Among his major achievements, he has improved the shopping experience of multiple customers by offering them personalized product recommendations based on their preferences. As a result, it has enabled users to establish loyal relationships with brands. It has also employed Digital Twins in the manufacturing network, managing to monitor soap production in real time and significantly improving its quality.

Moreover, his philosophy focuses on the use of data systems to solve complex problems in the business environment and drive innovation. In the same vein, in his spare time he develops software and participates in open source projects. As such, he stays at the forefront of the latest trends in subjects such as Bayesian Statistics, Big Data or Artificial Intelligence, among others.

In addition, his work has been rewarded on multiple occasions in the form of awards. For example, he recently received the "Business Achievement" award from Unilever for his contribution to the digital transformation of the company. In this regard, it is worth noting that the integration of technologies has enabled companies to improve their operational efficiency by automating repetitive tasks. This has considerably reduced human errors in the logistics chain, resulting in both time and cost savings.

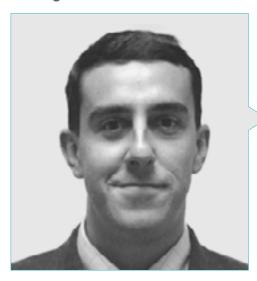

Mr. Morgan, Robert

- Global Director of Data Science at Unilever in New York, United States
- Head of Analytics and Data Science at Dunnhumby, New York
- Statistician at Unilever, New York
- M.Sc. in Computational Statistics from Bacth University
- M.Sc. in Statistical Research from Bristol University
- B.Sc. in Mathematics, Cardiff University
- Certificate in Statistical Learning from Stanford University
- Certificate in Programming from Johns Hopkins University

tech 14 | Course Management

Management

Mr. Galindo, Luis Ángel

- Senior High-Performance Consultant with 16 years of experience
- Definition, development and implementation of a successful open innovation model, with +10% year-on-year revenue growth leveraged on innovative assets
- Definition, development and implementation of successful Digital Transformation Programs for more than 8 years and 700+ people leading a pioneering role in the industry.
- Implementation of 20+ complex consulting projects worldwide for large companies in artificial intelligence, economic
 intelligence, cybersecurity, business development, digital transformation, risk assessment, process optimization and
 people management
- Expert in understanding customers and translating their needs into actual sales

Course Management | 17 tech

Professors

Mr. Almansa, Antonio

- Design, implementation and integration of the Julian Camarillo DC contingency center
- Senior Technician: operation, engineering and architecture of the Data Center (DC) networks located in Independencia and Orduña, as well as the transport network at national level for tariffs and discharges.
- Level 2 Expert: design and implementation of the networks (with technological change) of the DC of Fco. Sancha and later Manuel Tovar

Ms. Cordero García, Marta

- University Professor, Polytechnic School of Madrid
- Aerospace Engineering Department: Mathematics Applied to Aerospace Engineering

Mr. García, Felipe

- Founding Partner and President of KNOWDLE AI TECHNOLOGIES GROUP
- President promoter of the KNOWDLE CONSORTIUM GROUP ASSOCIATION
- Promoter and President of the KNOWDLE Foundation for Open Knowledge Bio Inspired
- FOUNDATION & RESEARCH INSTITUTE with an ecosystem of startups in acceleration under the same technology of Collective Artificial Intelligence
- Degree in IT from the Polytechnic University of Madrid
- Doctoral Thesis on "Wisdom Collective Intelligence"

tech 20 | Structure and Content

Module 1. Data Analysis and Interpretation

- Introduction to Statistics
- Measures Applicable to the Processing of Information
- Statistical Correlation 1.3.
- Theory of Conditional Probability 1.4.
- Random Variable and Probability Distribution
- Bayesian Inference
- Sample Theory 1.7.
- Confidence Intervals 1.8.
- Hypothesis Testing
- 1.10. Regression Analysis

Module 2. Data Analysis Techniques and Al

- Predictive Analytics
- Evaluation Techniques and Model Selection
- Lineal Optimization Techniques 2.3.
- Monte Carlo Simulations
- Scenario Analysis
- Machine Learning Techniques 2.6.
- 2.7. Web Analytics
- Text Mining Techniques 2.8.
- Methods of Natural Language Processing (NLP)
- Social Media Analytics

DATA PROCESSING to

Lorem ipsum dolor sit amet, ea pri veri iriure. Ne elit p

echnology background

robatus temporibus qui, ea sed sale probo forensibus.

Structure and Content | 21 tech

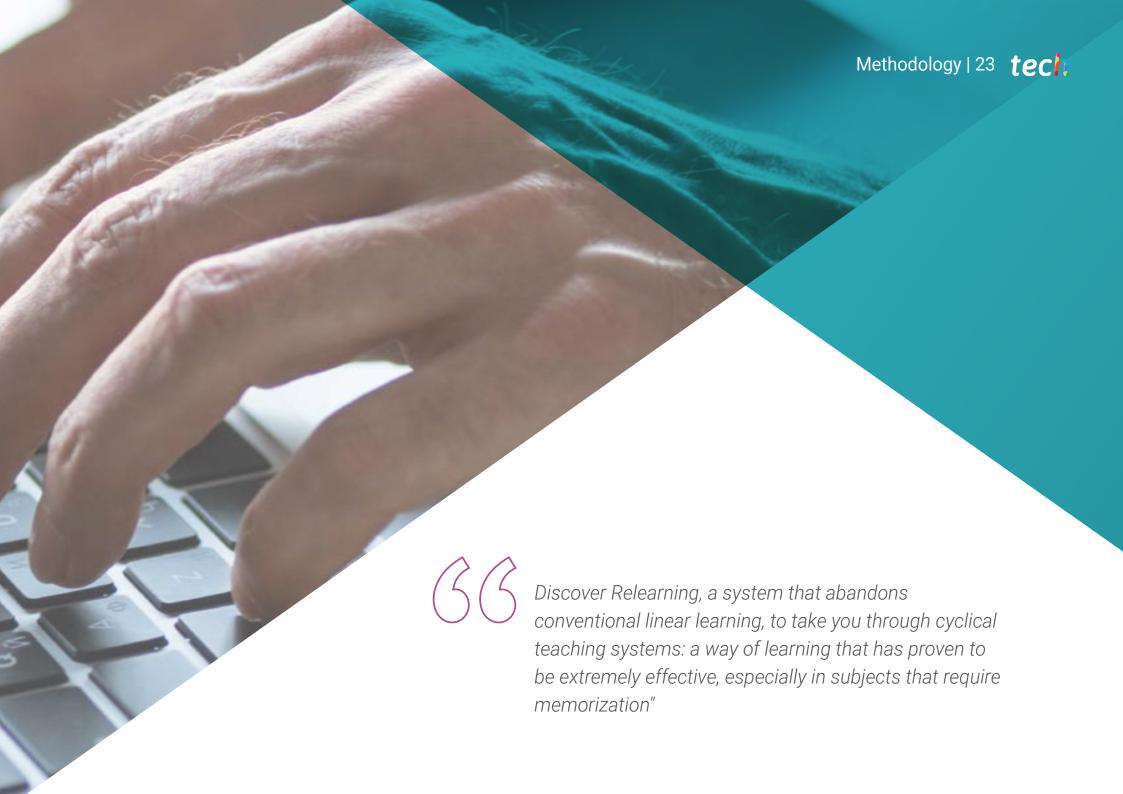

Module 3. Data Analysis Tools

- 3.1. Data Science R Environment
- 3.2. Data Science Python Environment
- 3.3. Static and Statistical Graphs
- 3.4. Data Processing in Different Formats and Different Sources
- 3.5. Data Cleaning and Preparation
- 3.6. Exploratory Studies
- 3.7. Decision Trees
- 3.8. Classification and Association Rules
- 3.9. Neural Networks
- 3.10. Deep Learning

Module 4. Database Management and Data Parallelization Systems

- 4.1. Conventional Databases
- 4.2. Non-Conventional Databases
- 4.3. Cloud Computing: distributed data management
- 4.4. Tools for the Ingestion of Large Volumes of Data
- 4.5. Types of Parallels
- 4.6. Data Processing in Streaming and Real Time
- 4.7. Parallel Processing: Hadoop
- 4.8. Parallel Processing: Spark
- 4.9. Apache Kafka
 - 4.9.1. Introduction to Apache Kafka
 - 4.9.2. Architecture
 - 4.9.3. Data Structure
 - 4.9.4. Kafka APIs
 - 4.9.5. Use Cases
- 4.10. Cloudera Impala

tech 24 | Methodology

Case Study to contextualize all content

Our program offers a revolutionary method of skills and knowledge development. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

At TECH, you will experience a way of learning that is shaking the foundations of traditional universities around the world."

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative.

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

Our program prepares you to face new challenges in uncertain environments and achieve success in your career"

The case method has been the most widely used learning system among the world's leading Information Technology schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question that you are presented with in the case method, an action-oriented learning method. Throughout the course, students will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines different teaching elements in each lesson.

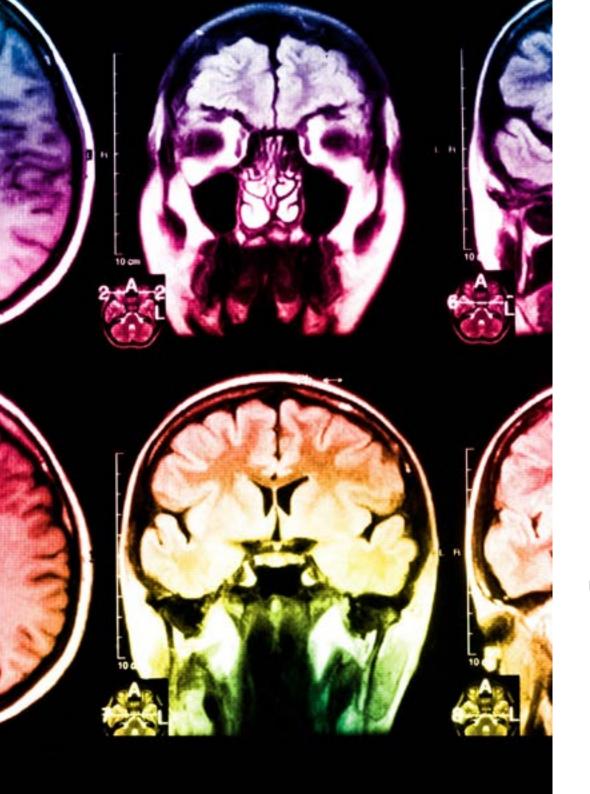

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

Methodology | 27 tech

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then adapted in audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high-quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific competencies and skills in each thematic area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

tech 32 | Certificate

This program will allow you to obtain your **Postgraduate Diploma in Data Analysis Techniques** endorsed by **TECH Global University**, the world's largest online university.

TECH Global University is an official European University publicly recognized by the Government of Andorra (*official bulletin*). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

This **TECH Global University** title is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.

Title: Postgraduate Diploma in Data Analysis Techniques

Modality: online

Duration: 6 months

Accreditation: 24 ECTS

has successfully passed and obtained the title of: Postgraduate Diploma in Data Analysis Techniques

This is a program of 600 hours of duration equivalent to 24 ECTS, with a start date of dd/mm/yyyy and an end date of dd/mm/yyyy.

TECH Global University is a university officially recognized by the Government of Andorra on the 31st of January of 2024, which belongs to the European Higher Education Area (EHEA).

In Andorra la Vella, on the 28th of February of 2024

^{*}Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH Global University will make the necessary arrangements to obtain it, at an additional cost.
