Introduction

Creative industries are absolutely important in today's society. Many of them belong to the cultural sector, such as cinema, theater or dance, for example. But there are also other professionals who have appeared and are making their mark in the market. The field of journalism and communication is absolutely related to these innovative companies, since the traditional media have had to bet on the Internet and new technologies to reach the general public. Journalists will, no doubt, be looking to update their knowledge in the field and, for this reason, TECH has designed a program on senior management of creative industries which seeks to become a landmark in the way professionals work.

“

Knowing the main tools for the management of creative industries will help you develop successfully in an innovative and highly competitive environment”

Traditionally, creativity and management have been conceived as antagonistic disciplines. Today, however, creativity and innovation have become the main drivers of economic progress alongside technology. This reality demands new professional profiles capable of developing, in a harmonious and effective way, these tools in the management of the so-called creative industries. Many of these new companies are closely related to the journalism and communication sector, so more and more of these professionals are looking for a way to improve their qualifications in order to develop successfully in this field.

For this reason, TECH has designed this program, through which the student will master all the necessary topics for the management of companies and organizations in the current context of creative industries. The program does not focus solely on arts management, but aims to provide the tools to analyze the economic, social and cultural realities in which creative industries develop and transform today. But, with an added value, since it also provides the specific knowledge of an MBA. The Advanced Master's Degree is designed to achieve academic and professional goals by acquiring the skills of market research, strategic vision, digital and co-creation methodologies.

This program is totally different from others that can be found in the market, since it places experience as the foundation of theory, allowing a global and sufficient knowledge to practice. And transferring all this knowledge to the planning and subsequent implementation of professional work. Therefore, students will rely on theoretical resources to improve their knowledge, but they will also have a multitude of practical cases that will be essential to fix the learning of the theoretical part, so that they will study in a contextual way, as if they were facing real situations.

Additionally, one of the main advantages of this program is that they will study it 100% online, without the need for travel or specific schedules, so that students can self-manage their studies, plan their schedules and pace of learning, which will be very useful to be able to combine it with the rest of their daily activities.

This **Advanced Master's Degree in Senior Management of Creative Industries** contains the most complete and up-to-date educational program on the market. The most important features of the program include:

- ♦ The development of case studies presented by experts in journalism
- ♦ Graphic, schematic, and practical contents created to provide scientific and practical information on the disciplines that are essential for professional development
- ♦ Practical exercises where the self-assessment process can be carried out to improve learning
- ♦ Its special emphasis on innovative methodologies in the management of creative industries
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

Creative industries are carving out a niche in the market, so more and more people are looking to specialize in this field"

“

TECH provides you with a multitude of theoretical and practical resources and the latest educational methodology on the market”

Its teaching staff includes professionals from the field of journalism, who bring to this program the experience of their work, as well as renowned specialists from reference societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive educational experience designed to train for real-life situations.

This program is designed around Problem-Based Learning, whereby the student must try to solve the different professional practice situations that arise throughout the program. For this purpose, the professional will be assisted by an innovative interactive video system created by renowned and experienced experts.

A program of great academic value that will be indispensable to improve your qualification.

At TECH you will be able to study with the most innovative teaching methodology on the market.

“

A world-class faculty to provide you with the academic resources that will help you achieve career success”

International Guest Director

S. Mark Young is an internationally renowned expert who has focused his research career on the Entertainment Industry. His results have received numerous awards, including the 2020 Lifetime Achievement Award in Accounting and Management from the American Accounting Association. He has also been honored three times for his contributions to the academic literature in these fields.

One of the most outstanding milestones of his career was the publication of the study "Narcissism and Celebrities", together with Dr. Drew Pinsky. This text compiled direct data on famous personalities from Cinema or Television. In addition, in the article, which would later become a best-selling book, the expert analyzed the narcissistic behaviors of celluloid stars and how these have become normalized in the modern media. At the same time, he addressed the impact of these on contemporary youth.

Also throughout his professional life, Young has delved into organization and concentration in the film industry. Specifically, he has investigated models for predicting the box-office success of major motion pictures. He has also contributed to activity-based accounting and the design of control systems. In particular, he is recognized for his influence in the implementation of effective management based on Balanced Scorecard.

Likewise, academic work has also shaped his professional life, and he has been elected to lead the George Bozanic and Holman G. Hurt Research Chair in Sports and Entertainment Business. He has also lectured and participated in study programs related to Accounting, Journalism and Communications. At the same time, his undergraduate and graduate studies have linked him to prestigious American universities such as Pittsburgh and Ohio.

Dr. Young, S. Mark

- ♦ Director of the George Bozanic and Holman G. Hurt Chair in Sports and Entertainment Business
- ♦ Official Historian of the University of Southern California Men's Tennis Team
- ♦ Academic researcher specializing in the development of predictive models for the motion picture industry
- ♦ Co-author of book "Narcissism and Celebrities"
- ♦ Ph.D. in Accounting Science from the University of Pittsburgh
- ♦ M.S. in Accounting from The Ohio State University

A comprehensive program that will allow you to experience a quality academic journey through the most relevant concepts in this subject"

05

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn, through collaborative activities and real cases, how to solve complex situations in real business environments.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

Our program prepares you to face new challenges in uncertain environments and achieve success in your career”

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
