Introduction

Currently, digital environments are living a golden age due to the millions of people who interact, purchase products or search for information. A space where companies and professionals can achieve large shares of success, but at the same time must maintain an excellent reputational image. This scenario has given a new boost to Advertising and Public Relations, which need professionals who know how to operate fluently in this context. This has prompted the creation of this program, where the journalist can delve into the communicative psychology and all those advertising elements necessary to achieve successful leadership. A 100% online program that provides the knowledge and tools necessary for the professional to grow in this field, being part of management teams in large advertising or communication agencies.

“

Thanks to this Master's Degree you will have the most modern tools to transmit an effective business communication in digital environments"

Capture, sell and persuade are still the predominant verbs that support Advertising and Public Relations. However, in recent years there has been an exponential increase in the tools used in communication, due in part to new technologies, which has forced a reformulation of strategies adapted to digital environments. Advertising companies and communication agencies are increasingly demanding more specialized professionals with extensive theoretical, technical and practical knowledge that will allow them to obtain successful results in their different advertising or communication campaigns.

This situation has motivated the creation of this Master's Degree, especially aimed at journalists and communication specialists who want to lead advertising and public relations projects. Communicating effectively, transmitting the right message and solving any internal or external reputation crisis are just some of the points to be addressed by this university program. For this purpose, it will have an intensive and dynamic syllabus, thanks to multimedia content based on video summaries, videos in detail or interactive summaries.

A program where students will acquire the necessary knowledge to master the elements and processes of advertising languages, the fundamentals of the advertising system, creative strategy and corporate identity. All this forms the main theoretical and practical pillars that will allow the professional to make strategic decisions in the field of persuasive communication.

To this end, TECH offers a university program with the most relevant information on Advertising and Public Relations management, which can also be easily accessed. Thus, students only need an electronic device with an Internet connection to consult the entire syllabus available 24 hours a day on the virtual campus. Plot the best communication strategy and grow professionally in the field of public relations with this university program"

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn, through collaborative activities and real cases, how to solve complex situations in real business environments.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.
