Introduction

The speed with which changes in the market affect companies, professionals and customers makes it necessary for professionals to specialize in strategic marketing and intelligent sales in order to orient activity to what the customer, the true protagonist of this century, really demands. For this reason, companies are creating competitive Marketing departments that are capable of attracting consumers and achieving the objectives set. This is a professional profile that is increasingly valued and requires constant specialization to adapt quickly to changes in the environment, which is why TECH has designed this comprehensive educational program.

“

A Postgraduate Diploma that will enable you to work in all areas of Marketing with the solvency of a high-level professional"

This Postgraduate Diploma in Marketing is a high-level program with which the students will be able to take a solid and solvent step in this field, achieving the professional skills necessary to practice as an expert in the field. Throughout these months of study, journalism and communication professionals will learn to identify specific marketing methods and techniques for decision making in the area of advertising and public relations: positioning, segmentation, analysis procedures and measurement of effectiveness, among other subjects of interest that the students will address during this program. In addition, topics as fundamental for the company as strategic marketing, the different tools of operational marketing, the sales manual, the Internet and new technologies or the marketing audit will be covered.

On the other hand, during the program the students will learn how to analyze the economic reality in a rational way, in such a way that they can identify the variables of a relevant problem, identifying the different alternatives of action, selecting the most appropriate one according to the objectives. They will also learn about the functioning and consequences of economic systems, the different alternatives for the allocation of resources, the accumulation of wealth and the distribution of income; and they will study and develop skills that will enable them to make strategic use of Marketing. That is to say, they will be able to analyze your relative position in a market, understanding the relationships between the different actors, and they will be able to establish guidelines that will help them to achieve their objectives.

For this purpose, the theoretical study will be combined with the analysis of real cases that allow learning from real experiences in today's markets. Thus, upon completion of this Postgraduate Diploma, the students will have acquired the specific skills to work, both at technical and managerial level, in the Marketing departments of companies in different sectors, achieving the necessary impetus to improve their sales and, therefore, economic benefits.

This **Postgraduate Diploma in Marketing** contains the most complete and up-to-date program on the market. The most important features include:

- ♦ The use of the latest technology in e-learning software
- ♦ The intensely visual teaching system, supported by graphic and schematic contents that are easy to assimilate and understand
- ♦ Practical case studies presented by practising experts
- ♦ State-of-the-art interactive video systems
- ♦ Teaching supported by telepractice
- ♦ Continuous updating and recycling systems
- ♦ Self-regulated learning, which makes the program completely compatible with other commitments
- ♦ Practical exercises for self-assessment and learning verification
- ♦ Support groups and educational synergies: questions to the expert, debate and knowledge forums
- ♦ Communication with the teacher team and individual reflection work
- ♦ Content that is accessible from any fixed or portable electronic device with an Internet connection
- ♦ Complementary resource banks that are permanently available

A state-of-the-art program to offer you the most current Marketing concepts and strategies”

“

Studying this TECH program will open new paths to your professional progress, achieving your incorporation in elite teams”

The teaching staff of this program is made up of professionals from different fields related to this specialty. As such, TECH can fulfill its academic updating objective. A multidisciplinary team of experienced professionals in different environments, who will develop theoretical knowledge efficiently, but above all, will put their practical knowledge derived from their own experience at the students' service.

This mastery of the subject matter is complemented by the effectiveness of the methodological design. Developed by a multidisciplinary team of e-learning experts, it integrates the latest advances in educational technology. As a result, students will be able to study with a range of comfortable and versatile multimedia tools that will give them the operational capacity they need in their study process.

The design of this program is centered on Problem-Based Learning. An approach that conceives learning as a highly practical process. To achieve this remotely, **telepractice** is used. Therefore, with the help of an innovative interactive video system, and **Learning from an Expert**, the students will be able to acquire the knowledge as if they were facing the very cases being studied. A concept that will allow students to integrate and memorize what they have learnt in a more realistic and permanent way.

Enroll in this program and become one of the most in-demand professionals of today.

Thanks to the innovative teaching methodology of this program, students will be able to learn immersively in real situations.

02

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world”

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn, through collaborative activities and real cases, how to solve complex situations in real business environments.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

“*Our program prepares you to face new challenges in uncertain environments and achieve success in your career*”

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific skills and abilities in each subject area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
