Introduction

First Generation Human Rights are universal, meaning that they apply to all people, regardless of nationality, race, gender, religion or sexual orientation. This makes them fundamental principles for justice and equality throughout the world. In a modern society, it is the responsibility of government authorities to safeguard these rights. However, in this way, we still find countries where the death penalty continues to exist, especially in those countries that are continuously involved in armed conflicts. For this reason, the following program was born, which seeks to provide a broad vision of international issues, allowing students to raise their skills to the maximum to face new projects. All this, through a 100% online format and without established schedules.

“

Analyze the reality of the death penalty in today's society thanks to the exclusive content of this 100% online Postgraduate Diploma"

First Generation Human Rights are enshrined in key documents such as the 1948 Universal Declaration of Human Rights, which establishes principles such as freedom of expression, equality before the law and the prohibition of torture. In this way, the international community has endorsed these rights through treaties and conventions, such as the International Covenant on Civil and Political Rights and the Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment.

The armed conflicts that have occurred in recent years have opened an interesting debate in the most important international organizations. On the other hand, it is known that there are countries that maintain the death penalty as a method of punishment, often carrying out practices that violate the integrity of people, who are sentenced without a proper trial.

All of the above brings us to a specific point, the violation of human rights. It is therefore crucial to have professionals who can ensure compliance with international treaties to safeguard the integrity of the most vulnerable.

In view of all this, TECH has prepared this program with the aim of providing interested professionals with a broad vision of international issues. With more advanced content, students will be able to explore the normative elements that make up the international human rights protection system, which have been in place since World War II.

In addition, they will delve into the current reality of the death penalty in the world and the mechanisms that have allowed its abolition. Finally, the student will analyze the interaction between international humanitarian law, States and international organizations, the regulations that govern it, and the various impacts and effects on international human rights law.

The content of this university program will be taught in a 100% online modality.

This **Postgraduate Diploma in First Generation Human Rights Protection** contains the most complete and up-to-date program on the market. The most important features include:

Methodology

This training program offers a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

Our program offers a revolutionary method of skills and knowledge development. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

“

At TECH, you will experience a way of learning that is shaking the foundations of traditional universities around the world”

Our university is the first in the world to combine Harvard Business School case studies with a 100% online learning system based on repetition.

A learning method that is different and innovative.

This intensive Law program at TECH Technological University will prepare you to face all the challenges in this area, both nationally and internationally. Its main objective is to promote personal and professional growth by helping you achieve success. For this purpose, we rely on Harvard Business school case studies with which we have a strategic Convention that allows us to use the materials used in the most prestigious university in the world.

We are the only online university that offers Harvard materials as teaching materials on its courses"

The student will learn, through collaborative activities and real cases, how to solve complex situations in real business environments.

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the course, students will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

Our university is the first in the world to combine the Harvard University case studies method with a 100% online learning system based on repetition, combining 8 different didactic elements in each lesson.

We enhance Harvard case studies with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only university in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

In our program learning is not a linear process, but rather, a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

This methodology has trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, and financial markets and instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

They will carry out activities to develop specific competencies and skills in each thematic area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization we live in.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

They will complete a selection of the best case studies in the field used at Harvard. Cases that are presented, analyzed, and supervised by the best senior management specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge. This exclusive multimedia content presentation training tExclusive system was awarded by Microsoft as a "European Success Story".

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises: so that they can see how they are achieving your goals.
