01 Introduction

Neurological Oncology is a rapidly evolving medical field with promising research. These studies provide great potential for the near-term future of clinical management. Currently, they have already made a considerable impact in complex areas such as the analysis of high-grade gliomas and brain metastasis. The constant updating of this health branch makes it difficult for neurologists to keep up to date with the latest procedures and skills to be implemented. Thus, based on this reality, TECH has designed an innovative academic modality, based on a 3-week intensive face-to-face stay. This Internship Program will take place in a first level health institution and, in this center, the specialist will work together with great professionals of the sector.

Neurological Oncology is a medical field in full expansion and you will be able to get up to date on the latest developments with this new Internship Program"

In the last decade, research related to brain tumors has experienced considerable growth. Most of the medical advances in this field are linked to the area of genomics because scientific evidence shows that these conditions can be identified and even prevented through in-depth studies of people's DNA. At the same time, cutting-edge technologies such as robotic surgery and electronic cryomicroscopy allow the specialist to detect in advance, and eliminate with precision, oncological ailments of the human nervous system. The accelerated pace of these changes has made it impossible for oncologists to keep up to date with the management and application of these new developments in their daily professional dynamics.

TECH aims to change this context through a rigorous and demanding Internship Program. This innovative academic modality will allow the neurologist to be inserted, for 3 weeks, in a prestigious health institution. During this intensive on-site stay, the physician will develop the most sought-after competencies in current Neurological Oncology. Throughout this educational process, the student will examine the most modern tools and techniques that are currently being implemented in the healthcare field.

For the Internship Program, the professional will move to a first level health center, which has the most competent technologies and the most qualified medical staff. Together with this equipment and experts, the specialist will complete 8-hour consecutive days, from Monday to Friday. During this time, the neurologist will be supported by an assistant tutor who will supervise his progress in treating real patients with different manifestations of tumors to be analyzed by the area of Neurological Oncology.

02

Why Study an Internship Program?

Neurological Oncology is one of the medical areas that has advanced the most in recent years thanks to numerous technological innovations. The professionals in this field of health have at their disposal multiple equipment and techniques of great actuality. However, they do not have pedagogical programs that allow them to keep up to date on the implementation of these assistance resources in their daily professional practice. For this reason, TECH has devised this first-class Internship Program through which specialists will analyze the latest developments in this discipline, together with leading experts, during an intensive on-site stay.

TECH will allow you to get up to date on the most modern surgical techniques for the removal of brain tumors together with the most distinguished experts in Neurological Oncology”

1. Updating from the latest technology available

Technological innovations are constantly being applied in the field of neurological oncology. In particular, he highlights the use of precision tools to treat tumors with specificity, without damaging other tissues, such as the gamma knife. At the same time, the combination of treatment techniques has been promoted and their use in the surgical environment has been added, such as the use of intraoperative computed tomography.

2. Gaining In-Depth Knowledge from the Experience of Top Specialists

During this Internship Program, the specialist will have access to a large team of experts who will help him/her to be updated on the latest techniques and equipment implemented in the area of Neurological Oncology. In turn, the professional will have an assistant tutor who will be in charge of supervising his or her progress in a more personalized way.

3. Entering First-Class Clinical Environments

For this academic modality, TECH has carefully selected the hospitals that will host its students. These entities have the most innovative technology available at the moment and also have highly prestigious specialists. This combination of resources and qualified personnel will allow the neurologist to keep up to date with the latest developments in the field in a faster and more flexible way.

4. Putting the acquired knowledge into daily practice from the very first moment

Through this Internship Program, the specialist will have direct access to real cases and will be able to apply new techniques, of varying complexity, in the diagnosis and treatment of brain tumors. From a 100% practical and face-to-face stay, the professional will reach a high level of mastery in the execution of the main interventionist tools and strategies available to him/her.

5. Expanding the Boundaries of Knowledge

This modality of studies offers the professional the possibility of accessing highly demanding hospital to highly demanding hospital environments. These state-of-the-art centers will be located in different geographic latitudes, based on an exhaustive management by TECH to guarantee access to specialists in international environments and standards of care.

You will have full practical immersion at the center of your choice”

03 Objectives

The general objective of the Internship Program in Neurological Oncology is to ensure that the professional updates the diagnostic and therapeutic procedures of the specialty in an exclusively practical way, through a hospital stay designed with clinical and academic rigor, under the guidance of renowned professionals in a hospital center of the highest scientific quality and technological innovation.

General Objectives

- Provide and expand knowledge on immunotherapy, as an example of a clear scientific advance in translational research, and one of the most promising lines of research in cancer treatment
- Incorporate advances in the molecular biology of brain tumors into pathologic diagnosis and chemotherapy
- Apply the usefulness of liquid biopsy, focused on the genomic analysis of circulating tumor DNA, for a more adequate diagnosis of brain gliomas, enabling their classification

Specific Objectives

- Apply the development of magnetic resonance imaging technology to diagnostic accuracy supported by functional methods such as diffusion, spectroscopy, perfusion and the BOLD technique
- Learn about the utility of multi-tracer PET-MRI imaging in the management of neuro-oncology patients, both in the characterization of primary injuries and during the follow-up of treated tumors
- Use of nuclear medicine in the diagnosis of neurological complications of oncological treatments
- Delve deeper into the functional anatomy of the brain is useful to correlate specific symptoms with the location of injuries in specific areas, being useful for the study of language lateralization, memory and neuroplasticity and important applications in surgery in special locations such as the language area or the supplementary motor area
- Use radiotherapy treatment of both primary and metastatic brain tumors
- To discuss the results of clinical trials and meta-analyses with the greatest impact on clinical practice in brain tumors
- Treat patients according to the therapeutic algorithm for the management of each of the brain tumors distributed by histological subgroups
- Discuss the current scenario of immunotherapy in the management of gliomas or glioblastoma multiforme
- Determine the positioning of antiangiogenic drugs for the treatment of glioblastoma multiforme
- Practice the appropriate therapeutic plan for a patient with glioblastoma multiforme
- Analyze the peculiarities of the pediatric patient with neuro-oncologic complications
- Review brain tumors considered rare and expand knowledge of clinical and radiological manifestations, natural history and treatment based on case reports and small series
- Discuss some neurological complications that, while not necessarily specific, do occur frequently in cancer patients, and require close collaboration between neurologists and cancer specialists
- Review the main neurological complications in cancer patients, both those due to the tumor itself due to primary or metastatic involvement, and those due to other causes such as metabolic encephalopathies, cerebrovascular accidents and those related to treatment

With this program you will be able to master the new diagnostic and therapeutic procedures for the management of patients with neurological cancer in its different locations”

04

Educational Plan

The Internship Program's Internship Program consists of a 3-week practical stay, from Monday to Friday, with 8 consecutive hours of practical training with an assistant specialist. This stay will allow the physician to see real patients alongside a team of reference professionals in the area of Neurological Oncology, applying the most innovative diagnostic procedures and planning the latest generation of therapy for each pathology.

In this completely practical Internship Program, the activities are aimed at developing and perfecting the skills necessary to provide healthcare care in areas and conditions that require highly qualified professionals, and are oriented towards specific expertise for practicing the activity, in a safe environment for the patient and with highly professional performance.

The practical teaching will be carried out with the active participation of students performing the activities and procedures of each area of competence (learning to learn and learning to do), accompanied and guided by professors and other fellow trainees, which will facilitate teamwork and multidisciplinary integration as transversal competences for the praxis of Dermatology Analysis Care Medicine (learning to be and learning to relate).

The procedures described below will form the basis of the practical part of the training, and their completion is subject to both the suitability of the patients and the availability of the center and its workload, with the proposed activities being as follows:

Receive specialized education in an institution that can offer you all these possibilities, with an innovative academic program and a human team that will help you develop your full potential”

Module	Practical Activity
Radiology techniques in the management of brain tumors	Indicate spectrometry and tractography for the diagnosis and sizing of brain tumors
	To implement the diffusion tensor technique to obtain anisotropic fraction maps to study certain pathological conditions affecting the white matter of the brain
	To carry out the analysis of Gliomas by positron emission tomography with magnetic resonance (PET-CT and PET-MRI)
	Use computed tomography (CT) in the approach to neuro-oncological complications, with emphasis on intraoperative complications
	Use of magnetic resonance imaging in the diagnosis and approach to complex brain tumors in the intraoperative setting
	Perform ultrasound scans for the diagnosis of tumors and other brain pathologies
	Perform magnetic resonance imaging studies on patients with brain oncologic pathologies
Neurosurgery of brain tumors	Perform craniotomy with the patient awake
	Applying fluorescence-guided surgery to brain tumors
	Perform endoscopic surgery for the removal of meningiomas and ependymomas
	Using Gamma Knife as alternative non-invasive outpatient treatments with state-of-the-art technology
	Indicate proton therapy for brain tumors that need to be treated precisely and decrease the risk of affecting other tissues
	Accurately delivering high doses of radiation to brain tumors with CyberKnife technology
Radiotherapeutic and pharmacological management of brain tumors	Reducing the size of brain tumors prior to surgery through chemotherapy
	Indicate chemotherapy to kill cancer cells remaining after surgery or radiation
	Employ targeted treatments to block genes or proteins involved in tumor growth based on detailed DNA profiling
	Implement different immunotherapies, including checkpoint inhibitors, cytokines and antineoplastic vaccines
	Restricting angiogenesis (growth of new blood vessels) of brain tumors by the application of Precision Inhibitors
Latest trends in interventional oncology for the management of neurological and medical complications in cancer	Diagnosing and staging cancer more accurately with image-guided needle biopsies
	Facilitate the administration of antineoplastic drugs through the use of a central venous catheter
	Blocking blood flow to a brain tumor by embolization
	Manage treatment algorithms for anaplastic astrocytomas, oligodendrogliomas and glioblastomas

05 Where Can I Do the Internship Program?

This Internship Program can be taken in a prestigious hospital center in the area of Neurological Oncology. The institutions chosen by TECH for this intensive on-site stay have the most innovative technologies and a trained staff committed to the management of procedures and equipment in this field of medical research. At the same time, the specialist will have access to facilities located in different geographical latitudes thanks to the program's commitment to develop an update based on international standards.

During this program, you will be able to apply what you have learned directly, on real patients, from the first day of work"

The student will be able to do this program at the following centers:

Medicine

Hospital HM Modelo

Country	City
Spain	La Coruña

Address: Rúa Virrey Osorio, 30, 15011, A Coruña

Network of private clinics, hospitals and specialized centers distributed throughout Spain

06 General Conditions

Civil Liability Insurance

This institution's main concern is to guarantee the safety of the trainees and other collaborating agents involved in the internship process at the company. Among the measures dedicated to achieve this is the response to any incident that may occur during the entire teaching-learning process.

To this end, this educational entity undertakes to take out civil liability insurance to cover any eventuality that may arise during the stay at the internship center.

This liability policy for interns will have broad coverage and will be taken out prior to the start of the practical training period. That way professionals will not have to worry in case of having to face an unexpected situation and will be covered until the end of the internship program at the center.

General Conditions of the Internship Program

The general terms and conditions of the internship agreement for the program are as follows:

1. TUTOR: During the Internship Program, students will be assigned with two tutors who will accompany them throughout the process, answering any doubts and questions that may arise. On the one hand, there will be a professional tutor belonging to the internship center who will have the purpose of guiding and supporting the student at all times. On the other hand, they will also be assigned with an academic tutor, whose mission will be to coordinate and help the students during the whole process, solving doubts and facilitating everything they may need. In this way, the student will be accompanied and will be able to discuss any doubts that may arise, both clinical and academic.

2. DURATION: The internship program will have a duration of three continuous weeks, in 8-hour days, 5 days a week. The days of attendance and the schedule will be the responsibility of the center and the professional will be informed well in advance so that they can make the appropriate arrangements.

3. ABSENCE: If the students does not show up on the start date of the Internship Program, they will lose the right to it, without the possibility of reimbursement or change of dates. Absence for more than two days from the internship, without justification or a medical reason, will result in the professional's withdrawal from the internship, therefore, automatic termination of the internship. Any problems that may arise during the course of the internship must be urgently reported to the academic tutor.

4. CERTIFICATION: Professionals who pass the Internship Program will receive a certificate accrediting their stay at the center.

5. EMPLOYMENT RELATIONSHIP: The Internship Program shall not constitute an employment relationship of any kind.

6. PRIOR EDUCATION: Some centers may require a certificate of prior education for the Internship Program. In these cases, it will be necessary to submit it to the TECH internship department so that the assignment of the chosen center can be confirmed.

7. DOES NOT INCLUDE: The Internship Program will not include any element not described in the present conditions. Therefore, it does not include accommodation, transportation to the city where the internship takes place, visas or any other items not listed.

However, students may consult with their academic tutor for any questions or recommendations in this regard. The academic tutor will provide the student with all the necessary information to facilitate the procedures in any case.

07 Certificate

This **Internship Program in Neurological Oncology** contains the most complete and up-to-date program on the professional and academic scene.

After the student has passed the evaluations, they will receive their corresponding TECH Internship Program issued by TECH Technological University via tracked delivery.

The certificate issued by TECH will reflect the grade obtained in the test.
