01

Introduction

This module will focus on hereditary disorders of the nervous system and neurological diseases with genetic predisposition. The latest research points to the genetic factor in numerous pathologies such as Parkinson's disease or dementia. Although these diseases are hereditary, the symptoms often do not appear at birth and present very variable symptoms and intensity, and can also affect descendants. Therefore, for its correct diagnosis or treatment and to guide and advise the family, it is necessary to carry out a correct genetic approach.

“

To develop a comprehensive approach that includes familial risk detection, prevention, reproductive intervention and other aspects that require the most advanced knowledge in Clinical Genetics of Neurological Diseases”

In recent years, the use of massive sequencing has exponentially increased the findings of variants in the genome that will provide a basis for expanding the understanding of many inherited neurological diseases.

In this module we will provide a detailed approach to the different genetic diseases affecting both the central and peripheral nervous system. We will deepen our knowledge of diseases such as myopathies, peripheral neuropathies, early dementias and cerebrovascular diseases. The module will have a theoretical text and an exposition of clinical cases of each pathology.

Acquire the most interesting advances in Clinical Genetics and bring to your professional practice a plus of excellence that will open new professional paths"

This Postgraduate Certificate offers you the characteristics of a high level scientific, teaching and technological course. These are some of its most notable features:

- ◆ Latest technology in online teaching software
- ◆ Highly visual teaching system, supported by graphic and schematic contents that are easy to assimilate and understand
- ◆ Practical cases presented by practising experts
- ◆ State-of-the-art interactive video systems
- ◆ Teaching supported by telepractice
- ◆ Continuous updating and recycling systems
- ◆ Autonomous learning: full compatibility with other occupations
- ◆ Practical exercises for self-evaluation and learning verification
- ◆ Support groups and educational synergies: questions to the expert, debate and knowledge forums
- ◆ Communication with the teacher and individual reflection work
- ◆ Content that is accessible from any fixed or portable device with an Internet connection
- ◆ Supplementary documentation databases are permanently available, even after the course

A specialization that masterfully combines intensity and flexibility, making its objectives easily and comfortably achievable by the professional"

Learn to work with the most advanced genetic tools, and take a step ahead of the needs that the labor market will increasingly demand from medical professionals"

This program has been developed by professionals from different Clinical Genetics offices in which they contribute their experience in daily practice, in the care of patients and families with a variety of hereditary disorders, both in genetic counseling and in prevention programs and prenatal and preconception counseling. The faculty involved in the course also carries out important research tasks relevant to the field of Genetics.

The course program addresses in its different modules the basic and necessary knowledge for the management of patients and their diseases in a Clinical Genetics practice. It offers a practical approach to the different techniques most commonly used for the diagnosis of hereditary diseases, as well as the interpretation of their results. It also offers an approach to the diseases that motivate the largest number of consultations in daily practice in the field of Clinical Genetics.

The course contains a theoretical text of the subject to be addressed, practical examples extracted from clinical cases that will help the understanding and deepening of knowledge.

The basic and necessary knowledge for the management of patients and their diseases in a Clinical Genetics practice.

A basic knowledge for the diagnosis, treatment and prevention of hereditary neurological diseases, most of which are poorly understood.

02

Objectives

Currently not all hospitals have genetics units, and it is foreseeable that all healthcare centers will have genetics units in the coming years. Students in this program will deepen the knowledge required to work as clinical geneticists both in the field of diagnosis and counseling in these units, or to be part of multidisciplinary groups of medical services, where patients with hereditary diseases are treated.

“

It acquires in just a few weeks, the ability of genetics to intervene in the treatment of neurological diseases, many of which are of low incidence”

General Objectives

- ◆ Knowledge of the historical evolution of knowledge in the area of genetics
- ◆ Learn the use of genetic analysis for diagnostic purposes
- ◆ Approaching cardiogenetics
- ◆ Learn about all known hereditary cancer syndromes
- ◆ Recognize genetic diseases affecting the sensory organs and know how to manage them
- ◆ Detail the molecular basis and mechanisms for the diagnosis of endocrine diseases
- ◆ Know the genetic diseases affecting the central and peripheral nervous system
- ◆ Learn about genetic nephrourological diseases, such as Fabry disease or Alport Syndrome
- ◆ Addressing the different major pediatric diseases
- ◆ Review hematological, metabolic and deposit, cerebral and small vessel diseases

Specific Objectives

- ◆ To provide strategies for a global approach to the patient with neurological pathology of genetic origin, to guide a clinical diagnosis considering previous explorations, both analytical, Immunohistochemistry, and electrophysiological studies already performed, as well as other complementary explorations

“

Advance in your profession by making your way in a field that is shaping up to be one of the most exciting in present and future medicine"

03

Course Management

For our course to be of the highest quality, we are proud to work with a teaching staff of the highest level, chosen for their proven track record. Professionals from different areas and fields of expertise that make up a complete, multidisciplinary team. A unique opportunity to learn from the best.

“

A course created and directed by experts in Clinical Genetics who will take you through the most updated and complete knowledge and give you the real and contextual vision of this area of work"

Management

Dr. S. Tahsin Swafiri Swafiri, M.D.

- Degree in Medicine and General Surgery (University of Extremadura - Badajoz)
- Specialist in Clinical Biochemistry and Molecular Pathology (Puerta de Hierro University Hospital, Majadahonda)
- Master's Degree in Rare Diseases (University of Valencia)
- Attending physician in Clinical Genetics at the University Hospitals of Infanta Elena, Rey Juan Carlos I, Fundación Jiménez Díaz and General de Villalba
- Associate Professor of Genetics at the Francisco de Vitoria University School of Medicine (Pozuelo de Alarcón- Madrid)
- Health Research Institute - Jiménez Díaz Foundation University Hospital

“

An impressive teaching staff, made up of professionals from different areas of expertise, will be your teachers during your training: A unique opportunity not to be missed”

Professors

Dr. Lorda Sánchez, Isabel María

- ◆ Degree in Medicine and Surgery from the University of Zaragoza. Year 1988
- ◆ Doctor of Medicine from the University of Zurich. Year 1991
- ◆ Personal Professional Accreditation in Human Genetics (AEGH)
- ◆ Member of the Spanish Association of Human Genetics (AEGH)
- ◆ Member of the European Cytogenetics Association (ECA)
- ◆ Hospital Coordinator of Familial Hereditary Cancer for the Community of Madrid

Dr. Rodríguez Pinilla, Elvira

- ◆ Degree in Medicine and General Surgery from the Complutense University of Madrid (1972-1979)
- ◆ Doctor of Medicine and Surgery, Complutense University of Madrid (1992)
- ◆ Diploma: "Epidemiology in Action: a course for public health professional" U.S. Department of Health and Human Services. Public Health Service. Centers for Disease Control. Atlanta, Georgia (USA) (1988)
- ◆ Accredited in Human Genetics by the Spanish Association of Human Genetics. (2005)
- ◆ Puericulturist Medical Doctor. Diploma in Puericulture and Preventive Pediatrics. School of Puericulture of the Spanish Society of Puericulture: Course XXVII (87th Promotion). Course 2011- 2012

Dr. Blanco Kelly, Fiona

- ◆ Adjunct Physician (Area Specialist) of the Genetics Service of the Jiménez Diaz Foundation University Hospital
- ◆ Degree in Medicine and Surgery from the Faculty of Medicine of the Complutense University of Madrid (2004)
- ◆ Area Specialist in Clinical Biochemistry since 2009
- ◆ Doctorate in Medicine in 2012
- ◆ Professional Master's Degree in Rare Diseases, University of Valencia, Valencia, Spain 2017
- ◆ Postdoctoral Course: University Expert in Clinical Genetics of the University of Alcalá de Henares, Madrid, Spain 2009
- ◆ Honorary Research Associate at the Institute of Ophthalmology (IoO), University College London (UCL), London, UK (01/2016-31/12/2020)
- ◆ Secretary of the Training and Dissemination Commission of the Spanish Association of Human Genetics

04

Structure and Content

The contents of this specialization have been developed by the different experts of this course, with a clear purpose: to ensure that our students acquire each and every one of the necessary skills to become true experts in this field.

A complete and well-structured program that will take you to the highest standards of quality and success. Expert patients participate in the preparation of the program, which adds a very original and close perspective, with real cases and situations that are not only clinical but also social. It has a holistic perspective, not just a medical one, making it of interest to healthcare professionals of any kind.

“

A complete syllabus that covers the essential aspects and new developments in Clinical Genetics intervention in neurological diseases with hereditary factor"

Module 1. Genetics of Neurological Diseases

- 1.1. Peripheral Neuropathies Hereditary
- 1.2. Hereditary Ataxias
- 1.3. Huntington's Disease
- 1.4. Hereditary Dystonia
- 1.5. Hereditary Paraparesis
- 1.6. Muscular Dystrophies
 - 1.6.1. Dystrophinopathies
 - 1.6.2. D. Facioscapulohumeral
 - 1.6.3. Steinert's Disease
- 1.7. Myotonia Congenita
- 1.8. Dementia
 - 1.8.1. Alzheimers Disease
 - 1.8.2. Frontotemporal Dementia
- 1.9. Amyotrophic Lateral Sclerosis
- 1.10. Cadasil Disease

“

A very complete teaching program, structured in didactic units organized to achieve fast and effective learning, with a focus on practical application”

05

Methodology

This training program provides you with a different way of learning. Our methodology uses a cyclical learning approach: ***Re-learning***.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the ***New England Journal of Medicine*** have ***considered it to be one of the most effective***.

“

Discover Re-learning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: A way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is abundant scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gervas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the physician's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method"

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that evaluate real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Re-Learning Methodology

At TECH we enhance the Harvard case method with the best 100% online teaching methodology available: Re-learning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

Professionals will learn through real cases and by resolving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Re-learning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best Spanish-speaking online university (Columbia University).

With this methodology, more than 250,000 physicians have been trained with unprecedented success in all clinical specialties regardless of surgical load. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a high socioeconomic profile and an average age of 43.5 years old.

Re-learning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: A direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

In this program you will have access to the best educational material, prepared with you in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Surgical Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances and to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive multimedia content presentation training Exclusive system was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents, international guides... in our virtual library you will have access to everything you need to complete your training.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: A clear and direct way to achieve the highest degree of understanding.

Testing & Re-testing

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises: So that they can see how they are achieving your goals.

Classes

There is scientific evidence on the usefulness of learning by observing experts: The system termed Learning from an Expert strengthens knowledge and recall capacity, and generates confidence in the face of difficult decisions in the future.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.

06

Certificate

Through a different and stimulating learning experience, you will be able to acquire the necessary skills to take a big step in your training. An opportunity to progress, with the support and monitoring of a modern and specialized university, which will propel you to another professional level.

“

Add to your CV a degree in Clinical Genetics of Neurological Diseases and become a highly competitive professional”

The **Postgraduate Certificate in Clinical Genetics of Neurological Diseases** contains the most complete and up-to-date scientific program on the market.

After the student has passed the assessments, they will receive their corresponding Postgraduate Certificate issued by **TECH Technological University** via tracked delivery*.

The diploma issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets requirements commonly demanded by labor exchanges, competitive examinations, and professionals from career evaluation committees.

Title: **Postgraduate Certificate in Clinical Genetics of Neurological Diseases**

ECTS: **6**

Official N° of Hours: **150 hours**.

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
