Introduction

Neuropsychology has made it possible to understand the relationships that occur between the brain and the behavior of the human being, which has meant an advance especially in those patients who suffer from some type of mental pathology. Progress has led to greater interest on the part of health professionals who want to delve into this field to apply it to their clinical cases. Given this demand, this 100% online program was created in which medical personnel are offered an exhaustive syllabus provided by a specialized teaching team. This will facilitate an update of your knowledge in a dynamic and simple way throughout the 6 weeks of this teaching.

“

An online program that adapts to you. Flexible and with the most recent content in Neuropsychology”

The study of neuropsychology leads the medical professional to deepen the neuroanatomical bases in relation to mental processes such as attention, memory, language, perception, executive functions and emotion. This will allow us to know the superior mental processes that are carried out between the brain and the behaviors of both healthy patients and those who have suffered some type of brain damage. This Postgraduate Certificate will allow professionals to carry out this intensive course across the 150 class hours that make up this program.

A program that seeks the updating of knowledge as its main goal, by professionals through multimedia content provided by a specialized teaching team. Thanks to the experience of the teaching staff, students will be able to delve into the bases of this science, reviewing the most important authors and works and focusing on the systems that compose it. Likewise, it will delve into functional and structural anatomy, as well as the most innovative neuroimaging techniques and which are obtaining the best results.

An advanced university degree that the professional can take comfortably. You only need an electronic device with an Internet connection to be able to access all the agenda hosted on the virtual platform from the beginning of the Postgraduate Certificate. Thus, the professional will be able to connect from and when he wishes, while distributing the study load according to their needs. An advantage that will allow you to reconcile your work and/or personal responsibilities with a program that is at the academic forefront.

The **Postgraduate Certificate in Introduction to Neuropsychology** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ◆ The development of practical cases presented by experts in Psychology and Immunology
- ◆ The graphic, schematic and practical contents with which it is conceived scientific and practical information on those disciplines that are essential for professional practice
- ◆ Practical exercises where the self-assessment process can be carried out to improve learning
- ◆ Its special emphasis on innovative methodologies
- ◆ Theoretical lessons, questions for the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

Delve into the principles of Neuropsychology through video summaries, detailed videos or specialized readings”

“

You can access the syllabus of this online program 24 hours a day from your computer or tablet TECH Technological University adapts to you”

The program includes, in its teaching staff, professionals from the sector who bring to this program the experience of their work, in addition to recognized specialists from prestigious reference societies and universities.

Its multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive education designed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professionals must try to solve the different professional practice situations that arise throughout the program. This will be done with the help of an innovative system of interactive videos made by renowned experts.

You are one step away from achieving the renewal of knowledge that you were looking for. You can get it in just 6 weeks.

A unique opportunity to reinforce your knowledge of cellular and molecular Neurobiology.

02 Objectives

This Postgraduate Certificate delves into the main studies over 6 weeks of neuropsychology, providing professionals with the most relevant information on this science, which in turn will allow them to update their knowledge that they are looking for. The teaching team that teaches this degree will guide and provide all the necessary tools to the students on this journey so that they can achieve their goals in an easier way.

“

TECH uses the latest technology applied to education to take you to a recycling of knowledge in a more dynamic and visual way"

General Objectives

- ◆ Develop an exhaustive knowledge of Neuropsychology in the graduate, from its origin to the most recent updates
- ◆ Know in detail the latest advances related to the tools and treatments in Psychology that are having the best results

Specific Objectives

- ◆ Know the beginnings of neuropsychology and its first studies
- ◆ Learn about the basics of Neurobiology
- ◆ Know and contextualize the bases of the development of the central nervous system

“

This Postgraduate Certificate will make it easier for you to update your knowledge about the development of the central nervous system with innovative teaching material”

03

Structure and Content

The study plan of this Postgraduate Certificate has been prepared according to the most recent knowledge contributed by the teaching team that integrates this program. A syllabus with multimedia content (video summaries, videos in detail, interactive diagrams) that will take you to the origins of neuropsychology, cellular and molecular neurobiology, the embryology of the nervous system, functional anatomy or neuroimaging techniques. In addition, the Relearning system, applied by TECH in its programs, will allow the reduce the long hours of study.

“

*Reduce long hours of study
thanks to the Relearning system
used by TECH in its degrees”*

Module 1. Introduction to Neuropsychology

- 1.1. Introduction to Neuropsychology
 - 1.1.1. Basis and Origins of Neuropsychology
 - 1.1.2. First Approaches to the Discipline
- 1.2. First Approaches to the Neuropsychology
 - 1.2.1. First Works Within Neuropsychology
 - 1.2.2. Most Relevant Authors and Works
- 1.3. Ontogeny and Phylogeny of the CNS
 - 1.3.1. Concept of Ontogeny and Phylogeny
 - 1.3.2. Ontogeny and Phylogeny Within the CNS
- 1.4. Cellular and Molecular Neurobiology
 - 1.4.1. Introduction to Neurobiology
 - 1.4.2. Cellular and Molecular Neurobiology
- 1.5. Neurobiology of Systems
 - 1.5.1. Concepts of Systems
 - 1.5.2. Structures and Development
- 1.6. Embryology of the Nervous System
 - 1.6.1. Principles of Embryology of the Nervous System
 - 1.6.2. Phases of CNS Embryology
- 1.7. Introduction to Structural Anatomy CNS
 - 1.7.1. Introduction to Structural Anatomy
 - 1.7.2. Structural Development
- 1.8. Introduction to Functional Anatomy
 - 1.8.1. What is Function Anatomy?
 - 1.8.2. Most Important Functions
- 1.9. Neuroimaging Techniques
 - 1.9.1. Concept of Neuroimaging
 - 1.9.2. Most Commonly Used Techniques
 - 1.9.3. Advantages and Disadvantages

“

A 100% online program that will allow you to discern the use of the neuroimaging technique”

04

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the physician's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that evaluate real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

Professionals will learn through real cases and by resolving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology, more than 250,000 physicians have been trained with unprecedented success in all clinical specialties regardless of surgical load. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Surgical Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances and to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence on the usefulness of learning by observing experts. The system known as Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.

05

Certificate

The Postgraduate Certificate in Introduction to Neuropsychology guarantees students, in addition to the most rigorous and up-to-date education, access to a Postgraduate Certificate issued by TECH Technological University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This **Postgraduate Certificate in Introduction to Neuropsychology** contains the most complete and up-to-date scientific program on the market.

After the student has passed the assessments, they will receive their corresponding **Postgraduate Certificate** issued by **TECH Technological University** via tracked delivery*.

The certificate issued by **TECH Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and meets the requirements commonly demanded by labor exchanges, competitive examinations, and professional career evaluation committees.

Title: **Postgraduate Certificate in Introduction to Neuropsychology**

Official N° of Hours: **150 h.**

*Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH EDUCATION will make the necessary arrangements to obtain it, at an additional cost.
