tech 06 | Introduction

Continuous training in the latest optometric technologies and treatments is essential in professional updating, preparing to take on jobs that are increasingly integrated into the healthcare system, both public and private.

The Postgraduate Certificate in the Latest Advances in Optical and Optometric Instrumentation covers the main fields of action for optometrists, always with the highest level of updating and with a first class teaching staff. The study plan has been designed from the perspective and experience of experts highly specialized in their modules, and immersed in the clinical world, which has led us to know the current and future training challenges.

This training has been clearly and robustly directed to the clinical field, preparing students to develop in this field with extensive theoretical and practical knowledge in optometry.

Students will follow modules, each of them structured in 10 topics. Each topic consists of a theoretical introduction, explanations by the professor, activities, etc., in such a way that learning becomes an enjoyable journey to high-level knowledge in Optical Instrumentation and Clinical Optometry.

In conclusion, this Postgraduate Certificate provides professionals with the theoretical and clinical knowledge necessary to address any of the specialties within Optics and Optometry, as well as opening the door to clinical research.

This Postgraduate Certificate in the Latest Advances in Optical and Optometric Instrumentation is the most complete and up-to-date scientific program on the market. The most important features of the program include:

- More than 100 clinical cases presented by experts in the different specialities
- The graphic, schematic, and eminently practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice.
- Developments in the Latest Advances in Optical and Optometric Instrumentation.
- The presentation of hands-on workshops on procedures, diagnostic and therapeutic techniques
- An algorithm-based interactive learning system for decision-making in the clinical situations presented throughout the course.
- Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments.
- Content that is accessible from any fixed or portable device with an Internet connection

This Postgraduate Certificate is the best investment you can make when choosing a refresher program to update your existing knowledge of the Latest Advances in Optical and Optometric Instrumentation" All the necessary methodology for nonspecialist medical professionals in the field of clinical optometry, in a specific and concrete Postgraduate Certificate.

The teaching staff includes professionals from the field of Optical and Optometric Instrumentation, who bring their experience to this training program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive training experience designed to train for real-life situations.

This program is designed around Problem Based Learning, where the medical professional must try to solve the different professional practice situations that arise during the course. For this purpose, the specialist will be assisted by an innovative interactive video system created by renowned and experienced experts in treating patients in children with extensive experience.

We have the best didactic material, an innovative methodology and a 100% online training, which will facilitate your study.

tech 10 | Objectives

General Objectives

- Know in detail the technical characteristics, indications for use and limitations of different devices specifically designed for ocular analysis.
- Learn the instruments for measuring tear quality and quantity, characterization of the cornea and sclera, measurement of the anterior chamber and the iridocorneal angle, etc., so that the professional who completes this program will know the latest instruments for measuring ocular structures.

If you are looking for success in your profession, we can help you achieve it. We offer you the most complete training on Optical Technologies and Clinical Optometry"

Objectives | 11 tech

Specific Objectives

- Become familiar with the methods and instrumentation necessary for the characterization of the ocular lacrimal layer.
- Describe the instruments used to measure optical parameters and corneal morphology.
- Know precisely the instruments necessary for the characterization of the sclera.
- Describe the techniques and instruments for measuring the irido-corneal angle.
- Introduce the instruments for intraocular pressure measurement.
- Deepen in the instruments used for the evaluation of the visual field.
- Describe the instrumentation used for optic nerve evaluation.
- Describe ocular biometry and its use in Optometry.

tech 14 | Course Management

Management

Dr. Calvache Anaya, José Antonio

- Doctor in Optometry and Vision Sciences
- Postgraduate Diploma in Statistics Applied to Health Sciences
- Optometrist at Clínica Baviera in Palma de Mallorca

Professors

Dr. Pérez Cambrodí, Rafael

- Doctor in Optometry and Vision Sciences PhD. University of Valencia
- Director of the Optometry Unit of Hospital Internacional Medimar.

tech 18 | Structure and Content

Module 1. Latest Advances in Optical and Optometric Instrumentation

- 1.1. Tear Characterization
 - 1.1.1. Characterization of the Meibomian Glands: Indications for Intense Pulsed Light (IPL) Treatment
 - 1.1.2. Qualitative and Quantitative Techniques
 - 1.1.3. Tear Patterns Assessment
- 1.2. Cornea Characterization
 - 1.2.1. Corneal Topography: Placido Systems and Scheimpflug Photography
 - 1.2.2. Optical Coherence Tomography (OCT) of the Anterior Segment
 - 1.2.3. Endothelial Microscopy
 - 1.2.4. Corneal Biomechanics
- 1.3. Characterization of the Sclera: Scleral Topography
- 1.4. Anterior Chamber and Iridocorneal Angle Evaluation
 - 1.4.1. Classic Techniques
 - 1.4.2. Anterior Segment OCT
 - 1.4.3. Gonioscopy
 - 1.4.4. Ultrasonic Biomicroscopy (UBM)
- 1.5. Tonometry
 - 1.5.1. Techniques
 - 1.5.2. Instruments

- 1.6. Evaluation of the Crystalline Lens
 - 1.6.1. Techniques
 - 1.6.2. Instruments
- 1.7. Evaluation of the Optic Nerve, Retina (Vascular Tree, Parenchyma and Macular Area) and Choroid
 - 1.7.1. Ophthalmoscopy
 - 1.7.2. Posterior Segment OCT
 - 1.7.3. Retinography
 - 1.7.4. Other Techniques
- 1.8. Visual Field Evaluation
 - 1.8.1. Computerized Campimetry
- 1.9. Systems for Assessing Visual Quality and Light Scattering
- 1.10. Ocular Biometry
 - 1.10.1. Uses in Optometry
 - 1.10.2. Ultrasonic Biometry
 - 1.10.3. Optical Biometrics

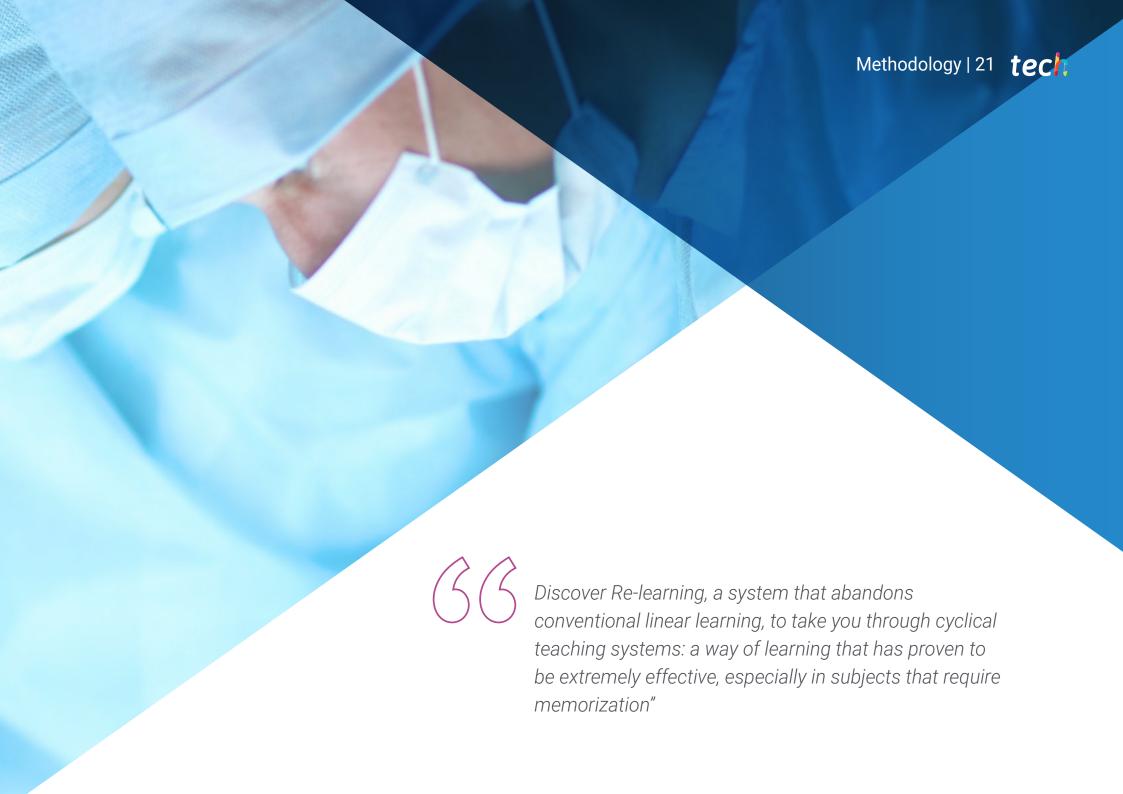

A unique, key, and decisive Training experience to boost your professional development"

tech 22 | Methodology

At TECH we use the Case Method

In a given situation, what would you do? Throughout the program, you will be presented with multiple simulated clinical cases based on real patients, where you will have to investigate, establish hypotheses and, finally, resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you can experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching potential or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in professional medical practice.

Did you know that this method was developed in 1912 at Harvard for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method"

The effectiveness of the method is justified by four fundamental achievements:

- Students who follow this method not only grasp concepts, but also develop their mental capacity by evaluating real situations and applying their knowledge.
- 2. The learning process has a clear focus on practical skills that allow the student to better integrate into the real world.
- 3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
- Students like to feel that the effort they put into their studies is worthwhile.
 This then translates into a greater interest in learning and more time dedicated to working on the course.

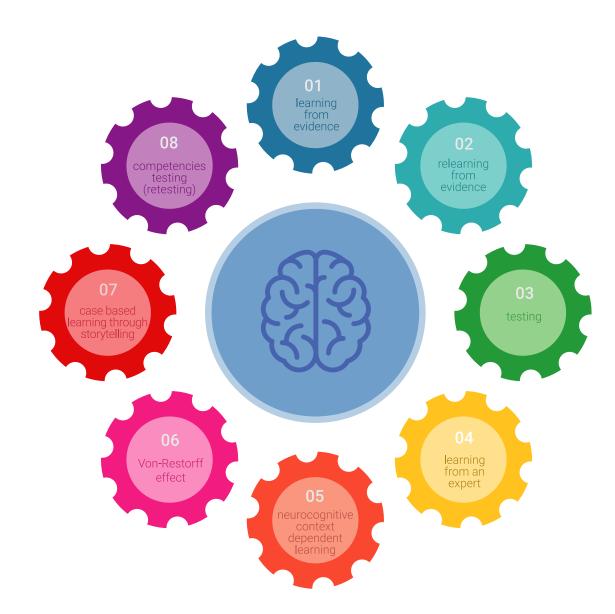

Re-learning Methodology

At TECH we enhance the Harvard case method with the best 100% online teaching methodology available: Re-learning.

Our University is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which represent a real revolution with respect to simply studying and analyzing cases.

The physician will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-theart software to facilitate immersive learning.

Methodology | 25 tech

At the forefront of world teaching, the Re-learning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best Spanish-speaking online university (Columbia University).

With this methodology we have trained more than 250,000 physicians with unprecedented success, in all clinical specialties regardless of the surgical load. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Re-learning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (we learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

tech 26 | Methodology

In this program you will have access to the best educational material, prepared with you in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is really specific and precise.

This content is then adapted in an audiovisual format that will create our way of working online, with the latest techniques that allow us to offer you high quality in all of the material that we provide you with.

Latest Techniques and Procedures on Video

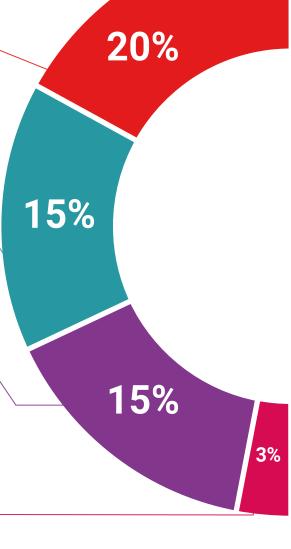

We introduce you to the latest techniques, to the latest educational advances, to the forefront of current medical techniques. All this, in first person, with the maximum rigor, explained and detailed for your assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

We present the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

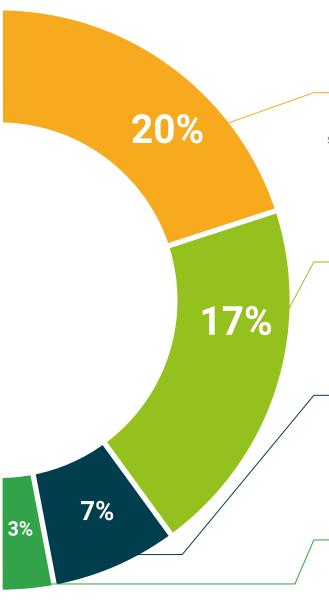

This unique multimedia content presentation training system was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents, international guides. in our virtual library you will have access to everything you need to complete your training.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, we will present you with real case developments in which the expert will guide you through focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate your knowledge throughout the program, through assessment and self-assessment activities and exercises: so that you can see how you are achieving your goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an expert strengthens knowledge and memory, and generates confidence in our difficult future decisions.

Quick Action Guides

We offer you the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help you progress in your learning.

tech 30 | Certificate

This **Postgraduate Certificate in the Latest Advances in Optical and Optometric Instrumentation** is the most complete and up-to-date scientific program on the market.

After the student has passed the evaluations, they will receive their corresponding **certificate** issued by **TECH - Technological University via tracked delivery.**

The certificate issued by **TECH - Technological University** will reflect the qualification obtained in the Postgraduate Certificate, and will meet the requirements commonly demanded by labor exchanges, competitive examinations, and professionals from career evaluation committees.

Title: Postgraduate Certificate in Latest Advances in Optical and Optometric Instrumentation

ECTS: 6

Official Number of Hours: 150

^{*}Apostille Convention. In the event that the student wishes to have their paper diploma Apostilled, TECH EDUCATION will make the necessary arrangements to obtain it at an additional cost of €140 plus shipping costs of the Apostilled diploma.
