Introduction

Business Management in the Pharma Biotech field involves facing unique challenges due to the regulated and highly competitive nature of the pharmaceutical and biotechnology industry. The continuous progress of scientific knowledge, technological innovation and ever-changing regulations have generated the need for updating for key players in this sector. For this reason, TECH has created this program, which provides the physician with cutting-edge concepts in these fields, as well as high skills in organizational and financial matters to optimally manage a company. In addition, this program is taught in a 100% online format, favoring a study adapted to the personal and professional needs of the student.

“

This Master's Degree will allow you to incorporate into your professional practice the most updated concepts when it comes to elaborating a Business Plan"

Pharma Biotech Business Management plays a vital role in the medical field by providing effective and efficient strategic management to companies in the pharmaceutical and biotechnology industry. Its importance lies in its ability to guide and make informed decisions in a highly regulated and competitive environment. In this way, it drives the research and development of new drugs and innovative therapies, which in turn contributes to the advancement of medicine and the improvement of people's quality of life. To carry out all these actions, the top managers of these companies must have high organizational skills and cutting-edge clinical knowledge.

With this in mind, TECH has created this Master's Degree, which offers doctors an excellent update in the field of Pharma Biotech Business Management. During 12 months of intensive study, the student will delve into the cutting-edge strategies to establish the analysis of the environment and competition or the methods to undertake the budget planning of companies in the pharmaceutical and biotechnology industry. They will also delve into the development of a business plan for a company in the sector.

All this will be achieved without the doctor having to give up their usual personal and professional responsibilities, as this program is offered in an innovative 100% online format. Likewise, multimedia materials will be available in a virtual library, which can be accessed at any time and place, since it only requires a device with an internet connection. Furthermore, the wide variety of multimedia formats offered will preserve a pleasant, individualized and decisive teaching.

This **Professional Master's Degree in MBA in Pharma Biotech Business Management** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ The development of practical cases presented by experts in Pharma Biotech
- ♦ The graphic, schematic, and practical content with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Practical exercises where self-assessment can be used to improve learning
- ♦ Its special emphasis on innovative methodologies
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an Internet connection

With this degree, you will delve into the most cutting-edge strategies when it comes to leading teams in the pharmaceutical industry"

“

Through the 100% online modality, this refresher program will allow you to study from anywhere and at any time of the day"

The program's teaching staff includes professionals from the field who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to learn in real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the academic year. For this purpose, the students will be assisted by an innovative interactive video system created by renowned and experienced experts.

Update your knowledge of biotechnology company management through the professional experience of leading specialists in this health area.

Throughout this course, you will delve into the most advanced strategies for integrating new drugs into the market.

02 Objectives

The aim of this program is to provide physicians with tools that will enable them to acquire knowledge and skills that are essential for success in the field of pharmaceutical and biotechnological management. In this way, they will be able to perform key functions in essential areas such as the exploration and development of drugs or their production and manufacture.

“

*You will adopt in your daily practice
the most up-to-date knowledge in
digital health management”*

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Methodology

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the physician's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that evaluate real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

Professionals will learn through real cases and by resolving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology, more than 250,000 physicians have been trained with unprecedented success in all clinical specialties regardless of surgical load. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Surgical Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances and to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence on the usefulness of learning by observing experts. The system known as Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
