Introduction

The role of the psychology professional becomes increasingly significant when an individual faces an urgent, emergency, or catastrophic situation. The ability to effectively support people during the most difficult moments of their lives is an essential skill that every professional must master—not only for daily practice in clinical settings but also when intervening in emergency situations.

“

This Postgraduate Certificate in Community Work for Emergency and Disaster Intervention for Nursing will foster a sense of confidence and assurance in professional practice, helping you grow both personally and professionally”

When a person faces an immediate risk to their life or that of their loved ones, the brain functions in a way that is entirely different from its usual daily operation. It is a moment when what is abnormal becomes normal and requires the assurance and competence of a professional who fully understands the situation and, more importantly, is capable of initiating concrete actions to guide the individual through the emotional overflow they are experiencing. This professional must be able to contain their reactions while accompanying them along the path toward regaining self-control and freedom of decision.

The strategies, tools, and skills you will develop through this program are compatible with any psychotherapeutic model, allowing you to apply them not only in emergency contexts but also in many other situations—both in clinical practice and in managing individuals facing “complications” in other areas of life.

*Update your knowledge through the
Postgraduate Certificate in Community
Work for Emergency and Disaster
Intervention for Nursing”*

This **Postgraduate Certificate in Community Work for Emergency and Disaster Intervention for Nursing** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ♦ Development of more than 75 clinical cases presented by expert professionals
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and healthcare education on those disciplines that are essential to professional practice
- ♦ New diagnostic and therapeutic developments on evaluation, diagnosis and intervention of the biological and neurological processes which explain mental illnesses
- ♦ It contains practical exercises where the self-assessment process can be carried out to improve learning
- ♦ An algorithm-based interactive learning system for decision-making in the clinical situations presented throughout the course
- ♦ With special emphasis on evidence-based psychology and research methodologies in psychology
- ♦ All of this will be complemented by theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an internet connection

This Postgraduate Certificate may be the best investment you can make when selecting a professional development program for two key reasons: not only will you update your knowledge in Community Work for Emergency and Disaster Intervention for Nursing, but you will also earn a diploma for the Postgraduate Certificate awarded by TECH Global University”

The teaching staff includes professionals from the field of psychology, who bring their experience to this training program, as well as renowned specialists from leading scientific societies.

Thanks to its multimedia content, developed with the latest educational technology, professionals will benefit from situated and contextual learning—simulated environments designed to provide immersive learning experiences that prepare them for real-life situations.

This program is designed around Problem-Based Learning, whereby the student must try to solve the different professional practice situations that arise during the course. To achieve this, you will benefit from an innovative interactive video system developed by renowned experts in this field, all with extensive teaching experience.

Increase your confidence in decision-making by updating your knowledge through this Postgraduate Certificate in Community Work for Emergency and Disaster Intervention for Nursing.

Make the most of this opportunity to discover the latest advances in Community Work for Emergency and Disaster Intervention for Nursing.

02 Objectives

The program is oriented towards achieving the development of theoretical-practical learning, so that the specialist is able to keep their knowledge up-to-date in order to practice their profession with complete safety.

“

This training program is designed to help you update your knowledge in Community Work for Emergency and Disaster Intervention, using the latest educational technology to contribute effectively and safely to decision-making, diagnosis, treatment, and patient care”

General Objectives

- ◆ Provide students with a comprehensive understanding of emergency and disaster situations, enabling them to act with confidence and efficiency in real emergency interventions
- ◆ Understand the neurological reactions of a person in a state of crisis in order to develop effective intervention methods based on this knowledge
- ◆ Identify the factors that lead individuals to develop a crisis and their different reactions throughout the various stages of a traumatic event
- ◆ Master general intervention skills and strategies that enable professionals to help affected individuals successfully cope with each phase of the crisis
- ◆ Master specific psychological support techniques that facilitate intervention in the various critical situations that may arise

Take advantage of this opportunity and take the step to stay up to date with the latest developments in Community Work for Emergency and Disaster Intervention for Nursing”

Specific Objectives

- ◆ Understand the characteristics of an emergency situation, from Civil Protection Emergency Plans to the different stages of intervention
- ◆ Differentiate between emergencies, urgent situations, and disasters, recognizing the specific characteristics of each
- ◆ Understand how the brain functions under stress in order to adapt interventions to the individual's level of comprehension
- ◆ Analyze and evaluate which reactions are normal and which are not in an emergency situation
- ◆ Distinguish the different phases that a person experiences during a traumatic crisis
- ◆ Master the principles of psychological first aid to intervene effectively in each phase that a person in crisis may experience
- ◆ Present incapacitation or critical information to the media in an effective and appropriate manner
- ◆ Conduct an initial assessment of the potential medical pathologies a patient may present, being able to provide an immediate response and refer the case when necessary

03

Course Management

This program includes highly regarded health professionals in the field of psychology in its teaching staff, who bring the experience of their work to this training.

Additionally, renowned specialists—members of prestigious national and international scientific societies—have participated in the design and development of the program.

“

This Postgraduate Certificate in Community Work for Emergency and Disaster Intervention for Nursing contains the most complete and up-to-date scientific program on the market”

Module 1. Basic Skills for Crisis Intervention

- 1.1. Self-Management: Handling One's Own Emotions
- 1.2. Proactivity
- 1.3. Creating a Climate of Trust
- 1.4. Empathic Listening
- 1.5. Applied Communication Skills
- 1.6. Representational Systems
- 1.7. Managing Difficult Conversations
- 1.8. Effective Use of Questions
- 1.9. Paraphrasing
- 1.10. Influence Techniques to Overcome Resistance
- 1.11. Achieving a Small "Yes"
- 1.12. Focusing on the Present and the Future
- 1.13. Expressing Ourselves with "I" Messages
- 1.14. Pacing and Leading
- 1.15. Encouraging the Person to Take Action

“

*A unique, essential and decisive
learning experience to boost your
professional development”*

05 Study Methodology

TECH is the world's first university to combine the **case study** methodology with **Relearning**, a 100% online learning system based on guided repetition.

This disruptive pedagogical strategy has been conceived to offer professionals the opportunity to update their knowledge and develop their skills in an intensive and rigorous way. A learning model that places students at the center of the educational process giving them the leading role, adapting to their needs and leaving aside more conventional methodologies.

“

TECH will prepare you to face new challenges in uncertain environments and achieve success in your career”

The student: the priority of all TECH programs

In TECH's study methodology, the student is the main protagonist.

The teaching tools of each program have been selected taking into account the demands of time, availability and academic rigor that, today, not only students demand but also the most competitive positions in the market.

With TECH's asynchronous educational model, it is students who choose the time they dedicate to study, how they decide to establish their routines, and all this from the comfort of the electronic device of their choice. The student will not have to participate in live classes, which in many cases they will not be able to attend. The learning activities will be done when it is convenient for them. They can always decide when and from where they want to study.

“

*At TECH you will NOT have live classes
(which you might not be able to attend)”*

The most comprehensive study plans at the international level

TECH is distinguished by offering the most complete academic itineraries on the university scene. This comprehensiveness is achieved through the creation of syllabi that not only cover the essential knowledge, but also the most recent innovations in each area.

By being constantly up to date, these programs allow students to keep up with market changes and acquire the skills most valued by employers. In this way, those who complete their studies at TECH receive a comprehensive education that provides them with a notable competitive advantage to further their careers.

And what's more, they will be able to do so from any device, pc, tablet or smartphone.

“

TECH's model is asynchronous, so it allows you to study with your pc, tablet or your smartphone wherever you want, whenever you want and for as long as you want”

Case Studies and Case Method

The case method has been the learning system most used by the world's best business schools. Developed in 1912 so that law students would not only learn the law based on theoretical content, its function was also to present them with real complex situations. In this way, they could make informed decisions and value judgments about how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

With this teaching model, it is students themselves who build their professional competence through strategies such as Learning by Doing or Design Thinking, used by other renowned institutions such as Yale or Stanford.

This action-oriented method will be applied throughout the entire academic itinerary that the student undertakes with TECH. Students will be confronted with multiple real-life situations and will have to integrate knowledge, research, discuss and defend their ideas and decisions. All this with the premise of answering the question of how they would act when facing specific events of complexity in their daily work.

Relearning Methodology

At TECH, case studies are enhanced with the best 100% online teaching method: Relearning.

This method breaks with traditional teaching techniques to put the student at the center of the equation, providing the best content in different formats. In this way, it manages to review and reiterate the key concepts of each subject and learn to apply them in a real context.

In the same line, and according to multiple scientific researches, reiteration is the best way to learn. For this reason, TECH offers between 8 and 16 repetitions of each key concept within the same lesson, presented in a different way, with the objective of ensuring that the knowledge is completely consolidated during the study process.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

A 100% online Virtual Campus with the best teaching resources

In order to apply its methodology effectively, TECH focuses on providing graduates with teaching materials in different formats: texts, interactive videos, illustrations and knowledge maps, among others. All of them are designed by qualified teachers who focus their work on combining real cases with the resolution of complex situations through simulation, the study of contexts applied to each professional career and learning based on repetition, through audios, presentations, animations, images, etc.

The latest scientific evidence in the field of Neuroscience points to the importance of taking into account the place and context where the content is accessed before starting a new learning process. Being able to adjust these variables in a personalized way helps people to remember and store knowledge in the hippocampus to retain it in the long term. This is a model called Neurocognitive context-dependent e-learning that is consciously applied in this university qualification.

In order to facilitate tutor-student contact as much as possible, you will have a wide range of communication possibilities, both in real time and delayed (internal messaging, telephone answering service, email contact with the technical secretary, chat and videoconferences).

Likewise, this very complete Virtual Campus will allow TECH students to organize their study schedules according to their personal availability or work obligations. In this way, they will have global control of the academic content and teaching tools, based on their fast-paced professional update.

The online study mode of this program will allow you to organize your time and learning pace, adapting it to your schedule”

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that assess real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

The university methodology top-rated by its students

The results of this innovative teaching model can be seen in the overall satisfaction levels of TECH graduates.

The students' assessment of the teaching quality, the quality of the materials, the structure of the program and its objectives is excellent. Not surprisingly, the institution became the top-rated university by its students according to the global score index, obtaining a 4.9 out of 5.

Access the study contents from any device with an Internet connection (computer, tablet, smartphone) thanks to the fact that TECH is at the forefront of technology and teaching.

You will be able to learn with the advantages that come with having access to simulated learning environments and the learning by observation approach, that is, Learning from an expert.

As such, the best educational materials, thoroughly prepared, will be available in this program:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

This content is then adapted in an audiovisual format that will create our way of working online, with the latest techniques that allow us to offer you high quality in all of the material that we provide you with.

Practicing Skills and Abilities

You will carry out activities to develop specific competencies and skills in each thematic field. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop within the framework of the globalization we live in.

Interactive Summaries

We present the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents, international guides... In our virtual library you will have access to everything you need to complete your education.

06 Certificate

The Postgraduate Certificate in Community Work for Emergency and Disaster Intervention for Nursing guarantees students, in addition to the most rigorous and up-to-date education, access to a diploma for the Postgraduate Certificate issued by TECH Global University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This private qualification will allow you to obtain a diploma for the **Postgraduate Certificate in Community Work for Emergency and Disaster Intervention for Nursing** endorsed by TECH Global University, the world's largest online university.

TECH Global University, is an official European University publicly recognized by the Government of Andorra ([official bulletin](#)). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

This **TECH Global University** private qualification, is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.
