Introduction

Facing challenges is an essential part of managing pharmaceutical and biotechnology companies due to the highly competitive nature of the industry. In this way, the relentless advance of empirical disciplines, technological progress and constant regulatory changes have generated the need for up-to-date education for the key players in this sector. Therefore, nurses must possess strong scientific and technical knowledge as well as a commercial and financial understanding of the company to successfully lead these organizations. In response to this need, TECH has created this program, which will enable professionals to acquire skills in the field of business management. This program is offered in a 100% online format, which will provide flexibility to access the didactic materials without time restrictions.

“

Through an intensive 12-month program, TECH offers you the opportunity to update your knowledge and become an up-to-date professional in the pharmaceutical and biotechnology field”

Business management plays a crucial role in the healthcare field by providing effective and efficient strategic direction to companies in the pharmaceutical and biotechnology industry. Its relevance lies in its ability to lead and make informed decisions in a highly regulated and competitive environment.

In addition, it promotes research and development of new drugs and innovative therapies, which contributes to the advancement of medicine and the improvement of people's quality of life. Following this perspective, it also promotes efficiency in the production and distribution of pharmaceutical products, ensuring the timely and safe delivery of medicines to those who need them.

Taking into consideration the above, TECH has developed a Master's Degree program that provides an excellent update in the field of Pharma Biotech Management for nurses. During 12 months of study, corporate responsibility in the industry will be explored, promoting sustainable practices in drug development. Likewise, quality and safety criteria in the production and marketing of drugs or budget planning techniques for companies in the sector will be delved into in depth. This, with the intention of fostering innovation, improving the pharmaceutical industry's operations and contributing to the advancement of medicine.

All this will be achieved without the professionals having to neglect their usual personal and work responsibilities, since this program is offered in an innovative 100% online format. Likewise, it will have multimedia materials housed in a virtual library, which can be accessed anytime and anywhere, only requiring a device with an Internet connection.

This **MBA in Pharma Biotech Business Management for Nursing** contains the most complete and up-to-date scientific program on the market. The most important features include:

- ◆ The development of practical cases presented by experts in Pharma Biotech
- ◆ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ◆ Practical exercises where self-assessment can be used to improve learning
- ◆ Its special emphasis on innovative methodologies
- ◆ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ◆ Content that is accessible from any fixed or portable device with an Internet connection

Optimize your learning at any time and place, thanks to the 100% online modality of this program"

You will delve into budget planning and financial operations management in the Pharmaceutical Industry through this program"

The program's teaching staff includes professionals from the field who contribute their work experience to this educational program, as well as renowned specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide immersive education programmed to prepare for real situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the students will be assisted by an innovative interactive video system created by renowned and experienced experts.

Improve your knowledge in Digital Health Management and apply it to your daily practice.

Increase your skills in organization and optimization of Pharma Biotech processes to succeed in this sector.

02

Objectives

The purpose of this Master's Degree is to provide nurses with the tools that will allow them to update their knowledge and fundamental skills to achieve success in the field of pharmaceutical and biotechnology management. In this way, they will be able to play key roles in essential areas such as drug research and development, project management and the production and manufacturing of such products.

“

You will identify, throughout this program, the tools and strategies to succeed in the Pharma Biotech market”

Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning.**

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH Nursing School we use the Case Method

In a given situation, what should a professional do? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Nurses learn better, faster, and more sustainably over time.

With TECH, nurses can experience a learning methodology that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, in an attempt to recreate the real conditions in professional nursing practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Nurses who follow this method not only grasp concepts, but also develop their mental capacity, by evaluating real situations and applying their knowledge.
2. The learning process has a clear focus on practical skills that allow the nursing professional to better integrate knowledge acquisition into the hospital setting or primary care.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine case studies with a 100% online learning system based on repetition combining a minimum of 8 different elements in each lesson, which is a real revolution compared to the simple study and analysis of cases.

The nurse will learn through real cases and by solving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology we have trained more than 175,000 nurses with unprecedented success in all specialities regardless of practical workload. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is really specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Nursing Techniques and Procedures on Video

We introduce you to the latest techniques, to the latest educational advances, to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch them as many times as you want.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Expert-Led Case Studies and Case Analysis

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical, and effective way to help students progress in their learning.
