Introduction to the Program

More and more organizations are prioritizing the mental health of their employees, aware of its direct impact on performance. A study by the World Health Organization reveals that for every dollar invested in mental health, a return of 4 dollars in productivity is obtained. In light of this reality, TECH has designed this comprehensive postgraduate program to meet this demand, through an innovative and integrated approach. Using a 100% online, dynamic, and multidisciplinary methodology, psychologists will master both advanced tools in group psychology and the most effective techniques to optimize group interaction, as well as strategies to build cohesive, efficient, and emotionally stable work teams.

“

*An exhaustive and 100% online program,
exclusive to TECH and with an international
perspective backed by our affiliation with the
European Association of Applied Psychology”*

Occupational and Organizational Psychology has become an essential discipline for understanding and optimizing human behavior in workplace environments. In an era where digital transformation, talent management, and corporate mental health occupy a priority place, professionals are needed who can analyze group dynamics, promote psychosocial well-being, and lead organizational change processes.

In response to this growing demand, TECH has designed this program in Occupational and Organizational Psychology, which will provide strategic knowledge to intervene competently at various levels of the organizational structure. Through a specialized academic itinerary, key topics will be addressed, such as transformational leadership, psychometrics applied to recruitment, the design of employee motivation programs, and the analysis of organizational climate. Additionally, contemporary aspects such as burnout prevention, generational diversity in the workplace, and mediation of interpersonal conflicts will be explored. Furthermore, current tools for performance evaluation, executive coaching, and the development of key transversal skills for business sustainability will be emphasized.

This postgraduate program will also be delivered 100% online, allowing psychologists to progress at their own pace and from anywhere in the world. Additionally, the Relearning methodology, based on the intelligent repetition of key content, will ensure a flexible, dynamic, and effective learning experience. With continuous access to updated materials, audiovisual resources, and an intuitive virtual environment, graduates will be able to seamlessly balance their professional commitments with the development of new professional skills.

Therefore, thanks to the membership in the **European Association of Applied Psychology (EAAP)**, students will have access to specialized resources, continuous training, and an annual seminar at no additional cost. Additionally, they will have the opportunity to collaborate with professionals and related organizations, integrate into an international network, and benefit from different membership levels that recognize both professional commitment and outstanding contributions in applied psychology.

This **Professional Master's Degree in Occupational and Organizational Psychology** contains the most complete and up-to-date program on the market. The most important features include:

- ♦ The development of case studies presented by experts in Occupational and Organizational Psychology
- ♦ The graphic, schematic, and practical contents with which they are created, provide scientific and practical information on the disciplines that are essential for professional practice
- ♦ Practical exercises where the self-assessment process can be carried out to improve learning
- ♦ Special emphasis on innovative methodologies in Occupational and Organizational Psychology
- ♦ Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- ♦ Content that is accessible from any fixed or portable device with an internet connection

Thanks to the best academic content, you will master the most rigorous psychological evaluations in the institutional context, including personnel selection and performance measurement"

“

Through the Relearning system employed by TECH, you will reduce the long hours of learning and memorization. What are you waiting for to enroll in the most complete university program on the market?”

The faculty includes professionals from the field of Occupational and Organizational Psychology, who bring their practical experience to this program, along with recognized specialists from leading societies and prestigious universities.

The multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive learning experience designed to prepare for real-life situations.

This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise during the course. For this purpose, the professional will be assisted by an innovative interactive video system created by renowned and experienced experts.

You will manage modern psychological tools to effectively manage organizational change, promoting employee adaptation and engagement.

You will be prepared to intervene in the resolution of interpersonal conflicts within organizations, applying effective mediation techniques.

- ♦ Identify the strengths and weaknesses of the parties involved in a conflict
- ♦ Create and be capable of implementing strategies for conflict resolution

Module 8. Social and Community Intervention

- ♦ Analyze the needs and demands of the recipients
- ♦ Define the objectives and develop the basic intervention plan based on its purpose
- ♦ Choose the appropriate psychological intervention techniques to achieve the objectives
- ♦ Use strategies and techniques to engage the recipients in the intervention

Module 9. Legal Psychology

- ♦ Analyze the context in which individual behaviors, group processes, and organizational dynamics develop
- ♦ Learn techniques for preparing psychological reports
- ♦ Provide feedback to recipients in an appropriate and accurate manner
- ♦ Explain human motivations, the biological structures that support them, and the psychological mechanisms that organize them

Module 10. Ethics and Deontology

- ♦ Learn about the field of ethics in the field of Psychology
- ♦ Reflect and gain a critical perspective on personal and professional values and ethical principles
- ♦ Delve into decision-making processes in Psychology and their ethical implications
- ♦ Possess an extensive theoretical understanding of professional deontology and develop tools for analysis and critical reflection to properly carry out your profession

Module 11. Human Resources Management

- ♦ Learn various techniques for managing and planning Human Resources in the implementation of a dashboard
- ♦ Understand the advantages and disadvantages of leadership strategies and Human Resources management

“

*You will advise organizational leaders on team development, decision-making, and motivation, promoting ethical leadership
Get ready to take your knowledge and skills to the next level!”*

Study Methodology

TECH is the world's first university to combine the **case study** methodology with **Relearning**, a 100% online learning system based on guided repetition.

This disruptive pedagogical strategy has been conceived to offer professionals the opportunity to update their knowledge and develop their skills in an intensive and rigorous way. A learning model that places students at the center of the educational process giving them the leading role, adapting to their needs and leaving aside more conventional methodologies.

“

TECH will prepare you to face new challenges in uncertain environments and achieve success in your career”

The student: the priority of all TECH programs

In TECH's study methodology, the student is the main protagonist.

The teaching tools of each program have been selected taking into account the demands of time, availability and academic rigor that, today, not only students demand but also the most competitive positions in the market.

With TECH's asynchronous educational model, it is students who choose the time they dedicate to study, how they decide to establish their routines, and all this from the comfort of the electronic device of their choice. The student will not have to participate in live classes, which in many cases they will not be able to attend. The learning activities will be done when it is convenient for them. They can always decide when and from where they want to study.

“

*At TECH you will NOT have live classes
(which you might not be able to attend)”*

The most comprehensive study plans at the international level

TECH is distinguished by offering the most complete academic itineraries on the university scene. This comprehensiveness is achieved through the creation of syllabi that not only cover the essential knowledge, but also the most recent innovations in each area.

By being constantly up to date, these programs allow students to keep up with market changes and acquire the skills most valued by employers. In this way, those who complete their studies at TECH receive a comprehensive education that provides them with a notable competitive advantage to further their careers.

And what's more, they will be able to do so from any device, pc, tablet or smartphone.

“

TECH's model is asynchronous, so it allows you to study with your pc, tablet or your smartphone wherever you want, whenever you want and for as long as you want”

Case Studies and Case Method

The case method has been the learning system most used by the world's best business schools. Developed in 1912 so that law students would not only learn the law based on theoretical content, its function was also to present them with real complex situations. In this way, they could make informed decisions and value judgments about how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

With this teaching model, it is students themselves who build their professional competence through strategies such as Learning by Doing or Design Thinking, used by other renowned institutions such as Yale or Stanford.

This action-oriented method will be applied throughout the entire academic itinerary that the student undertakes with TECH. Students will be confronted with multiple real-life situations and will have to integrate knowledge, research, discuss and defend their ideas and decisions. All this with the premise of answering the question of how they would act when facing specific events of complexity in their daily work.

Relearning Methodology

At TECH, case studies are enhanced with the best 100% online teaching method: Relearning.

This method breaks with traditional teaching techniques to put the student at the center of the equation, providing the best content in different formats. In this way, it manages to review and reiterate the key concepts of each subject and learn to apply them in a real context.

In the same line, and according to multiple scientific researches, reiteration is the best way to learn. For this reason, TECH offers between 8 and 16 repetitions of each key concept within the same lesson, presented in a different way, with the objective of ensuring that the knowledge is completely consolidated during the study process.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

A 100% online Virtual Campus with the best teaching resources

In order to apply its methodology effectively, TECH focuses on providing graduates with teaching materials in different formats: texts, interactive videos, illustrations and knowledge maps, among others. All of them are designed by qualified teachers who focus their work on combining real cases with the resolution of complex situations through simulation, the study of contexts applied to each professional career and learning based on repetition, through audios, presentations, animations, images, etc.

The latest scientific evidence in the field of Neuroscience points to the importance of taking into account the place and context where the content is accessed before starting a new learning process. Being able to adjust these variables in a personalized way helps people to remember and store knowledge in the hippocampus to retain it in the long term. This is a model called Neurocognitive context-dependent e-learning that is consciously applied in this university qualification.

In order to facilitate tutor-student contact as much as possible, you will have a wide range of communication possibilities, both in real time and delayed (internal messaging, telephone answering service, email contact with the technical secretary, chat and videoconferences).

Likewise, this very complete Virtual Campus will allow TECH students to organize their study schedules according to their personal availability or work obligations. In this way, they will have global control of the academic content and teaching tools, based on their fast-paced professional update.

The online study mode of this program will allow you to organize your time and learning pace, adapting it to your schedule”

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that assess real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

The university methodology top-rated by its students

The results of this innovative teaching model can be seen in the overall satisfaction levels of TECH graduates.

The students' assessment of the teaching quality, the quality of the materials, the structure of the program and its objectives is excellent. Not surprisingly, the institution became the top-rated university by its students according to the global score index, obtaining a 4.9 out of 5.

Access the study contents from any device with an Internet connection (computer, tablet, smartphone) thanks to the fact that TECH is at the forefront of technology and teaching.

You will be able to learn with the advantages that come with having access to simulated learning environments and the learning by observation approach, that is, Learning from an expert.

As such, the best educational materials, thoroughly prepared, will be available in this program:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

This content is then adapted in an audiovisual format that will create our way of working online, with the latest techniques that allow us to offer you high quality in all of the material that we provide you with.

Practicing Skills and Abilities

You will carry out activities to develop specific competencies and skills in each thematic field. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop within the framework of the globalization we live in.

Interactive Summaries

We present the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

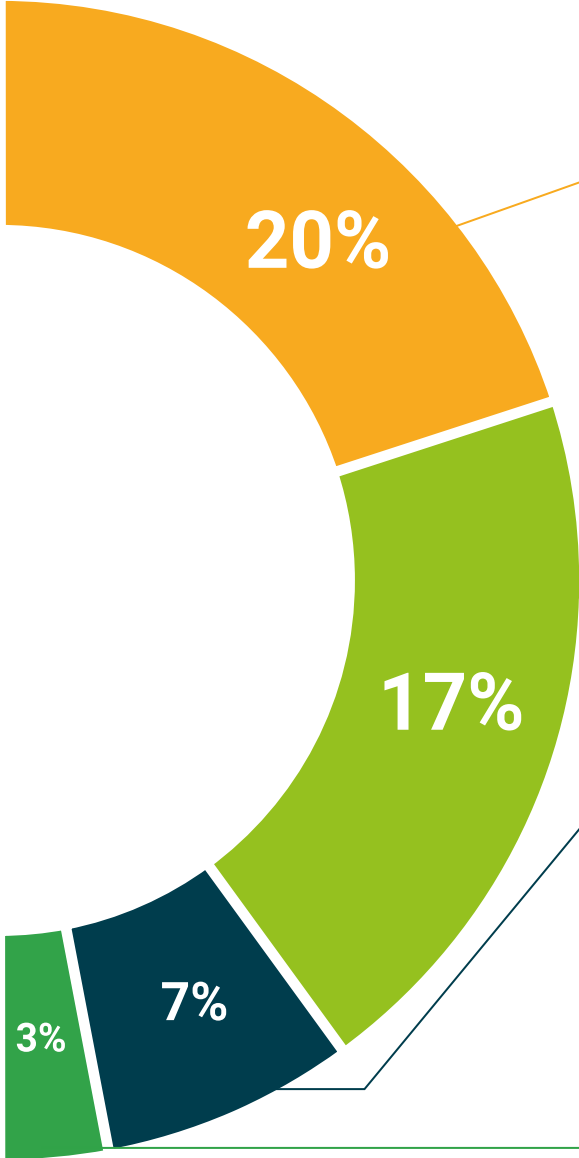

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".
