Sexuality is one of the pillars of human beings and a fundamental element for their emotional well-being. Nowadays, sex is moving away from taboos and traditional concepts. For this reason, the current role of the Psychology professional goes beyond treating couple problems and faces new challenges related to sexual diversity. Faced with this reality, TECH has created this program that provides the specialist with the most up-to-date information on sexological counseling, new masculinities and violence due to sexual orientation. All in a 100% online academic format and with quality multimedia content, developed by professionals with extensive experience in the area of Sexology.

tech 06 | Introduction

Infidelity, jealousy and romantic breakups are closely associated with the work of a psychology professional who provides sexological counseling services and accompaniment to couples. However, the new reality implies the appearance of other problems that affect mental health, such as violence due to sexual diversity, sexual abuse or gender violence.

A reality that leads psychologists to be constantly updating their knowledge on the approach and management of patients suffering from different disorders associated with their sexuality. In this new context, this Master's Degree in Sexology is created, which takes the professional into the new developments in sexological counseling, the gender perspective and the new masculinities over a period of 12 months.

A program designed to offer the specialist the most relevant information through a syllabus with a theoretical-practical approach, which will allow them to obtain the necessary techniques and resources to provide sex education according to the different stages of the patient's life. For this purpose, TECH provides the graduate with the most advanced pedagogical tools, to which they will have access 24 hours a day.

Also, thanks to the *Relearning* methodology, the psychologist will be able to progress through the study plan in a much more natural way and assimilate the key concepts more effectively. An efficient system that reduces the long hours of memorization.

The Psychology professional is, therefore, facing an excellent opportunity to update their knowledge in Sexology through a 100% online and flexible Master's Degree. Students only need an electronic device with an Internet connection to view the program's syllabus at any time of the day. In addition, there are no classes with fixed schedules, so students can self-manage their study time and make a quality university degree compatible with their daily responsibilities.

This **Master's Degree in Sexology** contains the most complete and up-to-date program on the market. The most important features include:

- The development of case studies presented by experts in Psychology and Sexology
- The graphic, schematic, and practical contents with which they are created, provide practical information on the disciplines that are essential for professional practice
- Practical exercises where self-assessment can be used to improve learning
- Its special emphasis on innovative methodologies
- Theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- Content that is accessible from any fixed or portable device with an Internet connection

Over the course of 12 months you will gain the most effective methods for comprehensive intervention for LGBTQ+ elderly people"

The problems associated with fertility are on the rise. Acquire with this program intensive learning about the precise psychological support during this intense process"

The program's teaching staff includes professionals from the sector who contribute their work experience to this program, in addition to renowned specialists from leading societies and prestigious universities.

Its multimedia content, developed with the latest educational technology, will provide the professional with situated and contextual learning, i.e., a simulated environment that will provide an immersive education programmed to learn in real situations.

The design of this program focuses on Problem-Based Learning, by means of which the professional must try to solve the different professional practice situations that are presented throughout the academic course. For this purpose, the student will be assisted by an innovative interactive video system created by renowned experts.

Get into the most advanced and current syllabus in the new masculinities and the process of identity revision.

You are in front of a quality university qualification that is compatible with your day-to-day work in psychological consultation.

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH the psychologist experiences a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gérvas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the psychologist's professional practice.

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method"

The effectiveness of the method is justified by four fundamental achievements:

- 1. Psychologists who follow this method not only master the assimilation of concepts, but also develop their mental capacity by means of exercises to evaluate real situations and apply their knowledge.
- 2. Learning is solidly translated into practical skills that allow the psychologist to better integrate knowledge into clinical practice.
- 3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
- 4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

Our university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, which is a real revolution compared to the simple study and analysis of cases.

The psychologist will learn through real cases and by solving complex situations in simulated learning environments.

These simulations are developed using state-of-the-art software to facilitate immersive learning.

Methodology | 39 tech

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

This methodology has trained more than 150,000 psychologists with unprecedented success in all clinical specialties. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by our learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then adapted in audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high-quality pieces in each and every one of the materials that are made available to the student.

Latest Techniques and Procedures on Video

TECH introduces students to the latest techniques, to the latest educational advances, to the forefront of current psychology. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Effective learning ought to be contextual. Therefore, TECH presents real cases in which the expert will guide students, focusing on and solving the different situations: a clear and direct way to achieve the highest degree of understanding.

Testing & Retesting

We periodically assess and re-assess students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Quick Action Guides

TECH offers the most relevant contents of the course in the form of worksheets or quick action guides. A synthetic, practical and effective way to help students progress in their learning.
