

Executive Master's DegreeLean Manufacturing

» Modality: online

» Duration: 12 months

» Certificate: TECH Global University

» Credits: 60 ECTS

» Schedule: at your own pace

» Exams: online

» Target Group: University Graduates who have previously completed any of the degrees in the fields of Social and Legal Sciences, Administrative and Business Sciences

01 **Welcome**

In order to maximize their resources and profits, companies require efficient work systems that allow them to produce at the lowest possible cost. With this premise arises Lean Manufacturing, a management philosophy that breaks with many of the existing paradigms, generating a great impact on the organization and the achievement of its goals. For this reason, TECH has made a firm commitment to this program, which provides professionals with the tools they need to implement the Lean strategy with a total guarantee of success in any industry. An unparalleled academic option for its 100% online teaching format, for its flexibility and for having the best didactic material in the current university panorama.

tech 08 | Why Study at TECH?

At TECH Global University

Innovation

The university offers an online learning model that balances the latest educational technology with the most rigorous teaching methods. A unique method with the highest international recognition that will provide students with the keys to develop in a rapidly-evolving world, where innovation must be every entrepreneur's focus.

"Microsoft Europe Success Story", for integrating the innovative, interactive multi-video system.

The Highest Standards

Admissions criteria at TECH are not economic. Students don't need to make a large investment to study at this university. However, in order to obtain a qualification from TECH, the student's intelligence and ability will be tested to their limits. The institution's academic standards are exceptionally high...

95%

of TECH students successfully complete their studies

Networking

Professionals from countries all over the world attend TECH, allowing students to establish a large network of contacts that may prove useful to them in the future.

+100000

+200

executives prepared each year

different nationalities

Empowerment

Students will grow hand in hand with the best companies and highly regarded and influential professionals. TECH has developed strategic partnerships and a valuable network of contacts with major economic players in 7 continents.

+500

collaborative agreements with leading companies

Talent

This program is a unique initiative to allow students to showcase their talent in the business world. An opportunity that will allow them to voice their concerns and share their business vision.

After completing this program, TECH helps students show the world their talent.

Multicultural Context

While studying at TECH, students will enjoy a unique experience. Study in a multicultural context. In a program with a global vision, through which students can learn about the operating methods in different parts of the world, and gather the latest information that best adapts to their business idea.

TECH students represent more than 200 different nationalities.

TECH strives for excellence and, to this end, boasts a series of characteristics that make this university unique:

Analysis

TECH explores the student's critical side, their ability to question things, their problem-solving skills, as well as their interpersonal skills.

Academic Excellence

TECH offers students the best online learning methodology. The university combines the Relearning method (postgraduate learning methodology with the best international valuation) with the Case Study. Tradition and vanguard in a difficult balance, and in the context of the most demanding educational itinerary.

Economy of Scale

TECH is the world's largest online university. It currently boasts a portfolio of more than 10,000 university postgraduate programs. And in today's new economy, **volume + technology = a ground-breaking price**. This way, TECH ensures that studying is not as expensive for students as it would be at another university.

Learn with the best

In the classroom, TECH's teaching staff discuss how they have achieved success in their companies, working in a real, lively, and dynamic context. Teachers who are fully committed to offering a quality specialization that will allow students to advance in their career and stand out in the business world.

Teachers representing 20 different nationalities.

At TECH, you will have access to the most rigorous and up-to-date case analyses in academia"

tech 12 | Why Our Program?

This program will provide you with a multitude of professional and personal advantages, among which we highlight the following:

A Strong Boost to Your Career

By studying at TECH, students will be able to take control of their future and develop their full potential. By completing this program, students will acquire the skills required to make a positive change in their career in a short period of time.

70% of students achieve positive career development in less than 2 years.

Develop a strategic and global vision of the company

TECH offers an in-depth overview of general management to understand how each decision affects each of the company's different functional fields.

Our global vision of companies will improve your strategic vision.

Consolidate the student's senior management skills

Studying at TECH means opening the doors to a wide range of professional opportunities for students to position themselves as senior executives, with a broad vision of the international environment.

You will work on more than 100 real senior management cases.

You will take on new responsibilities

The program will cover the latest trends, advances and strategies, so that students can carry out their professional work in a changing environment.

45% of graduates are promoted internally.

Access to a powerful network of contacts

TECH connects its students to maximize opportunities. Students with the same concerns and desire to grow. Therefore, partnerships, customers or suppliers can be shared.

You will find a network of contacts that will be instrumental for professional development.

Thoroughly develop business projects.

Students will acquire a deep strategic vision that will help them develop their own project, taking into account the different fields in companies.

20% of our students develop their own business idea.

Improve soft skills and management skills

TECH helps students apply and develop the knowledge they have acquired, while improving their interpersonal skills in order to become leaders who make a difference.

Improve your communication and leadership skills and enhance your career.

You will be part of an exclusive community

Students will be part of a community of elite executives, large companies, renowned institutions, and qualified teachers from the most prestigious universities in the world: the TECH Global University community.

We give you the opportunity to study with a team of world-renowned teachers.

tech 16 | Objectives

TECH makes the goals of their students their own goals too. Working together to achieve them.

The Executive Master's Degree in Lean Manufacturing will train the student to:

Analyze and be able to distinguish the lean philosophy from other approaches to operations improvement.

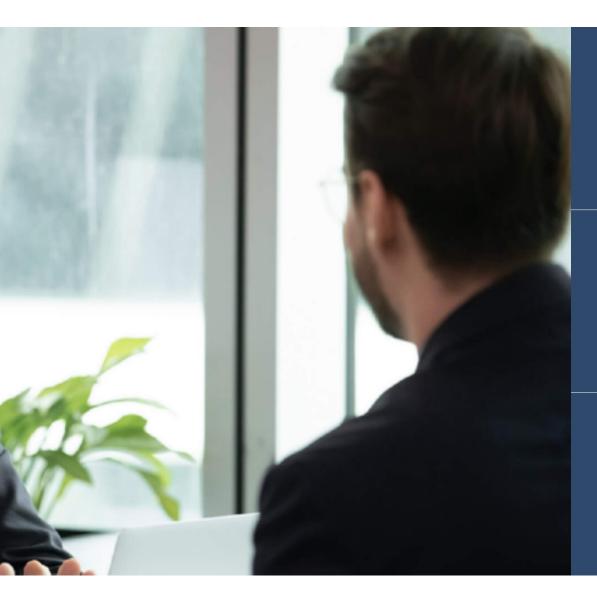

Identify any waste in the company's processes.

Distinguish the different types of industrial processes in which it is possible to act

04

Differentiate the different types of flow in an operational context.

05

Identify the types of demand that our industry must satisfy.

06

Develop the tools and techniques used in Lean Manufacturing quality management.

Analyze statistical methods of process control and root cause analysis.

Establish the keys to implement and sustain a Kaizen culture in the company.

Evaluate organizational, operational and management systems, based on Operational Excellence and High Performance dynamics: LEAN

Identify production equipment efficiency problems.

Analyze the keys to implement the Lean Manufacturing philosophy in a company.

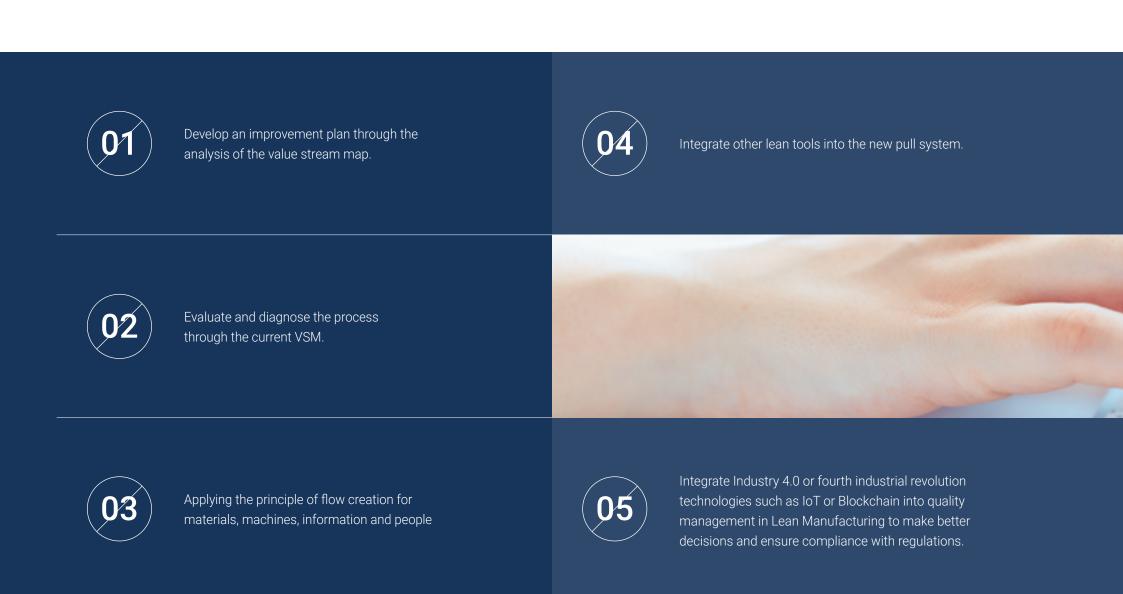

Delve into the best practices for the successful implementation of Lean Manufacturing in an organization.

Skills Throughout this learning process, the professional will have the opportunity to increase his or her leadership to implement the most effective Lean Manufacturing strategies in a company. This will be possible thanks to the numerous didactic resources, including case studies, which will allow you to integrate the methodologies used to improve process efficiency and productivity. Likewise, thanks to the specialized teaching staff, the graduate will be able to resolve any doubts he/she may have about the content of this university program.

Apply tools such as Standard Work, "Jidoka", "Andon", "PokaYoke", and "Visual Management" in quality management in Lean Manufacturing.

Evaluate the structure and advantages of Work Cells and their impact on efficiency and continuous improvement.

09

Measure Overall Equipment Effectiveness (OEE) of equipment in any company

Apply the PDCA/PDSA cycle and the 6M method to identify improvement opportunities and solve problems.

Develop skills to identify, select and implement the implementation team.

tech 26 | Structure and Content

Syllabus

The syllabus of this academic option has been designed to provide students with a rigorous and exhaustive knowledge of the Lean Manufacturing methodology and its integration in organizations.

A teaching that will lead the graduate throughout this academic itinerary to carry out a deep analysis of this management philosophy, its principles, the implementation of strategies to achieve the proposed results. All this, in addition, complemented by video summaries of each topic, videos in detail, specialized readings and case studies easily accessible through a digital device with internet connection and at any time of the day.

In this way, you will learn in a much more dynamic way about the difference between processes and flow, value stream mapping, flow generation, quality management and continuous improvement or Total Productive Maintenance TPM.

Likewise, with the Relearning system, based on the continuous reiteration of key concepts, the professional will not have to invest long hours of study and memorization, since this method focuses on the most important concepts, thus making it much easier to consolidate them.

This is a great opportunity for students seeking a complete and intensive learning experience through a flexible academic option that adapts to the daily schedule of the graduate and his or her motivations for professional progression in a business environment that requires qualified personnel with a high level of management knowledge.

This Executive Master's Degree takes place over 12 months and is divided into 10 modules:

Module 1	Lean Manufacturing Principles and Context
Module 2	Value and Waste (Duration): Identification and elimination of non-value-adding activities
Module 3	Value Stream Mapping: Analysis and Mapping of the flow of materials, information and activities in a process. Flow optimization
Module 4	Continuous Flow: Process design for smooth and continuous workflows
Module 5	Pull system: implementation of a demand-driven production system to control production and minimize inventory
Module 6	Lean Quality Management
Module 7	Continuous improvement, Kaizen
Module 8	Evolution of production organization in a Lean system
Module 9	TPM (Total Productive Maintenance), OEE (Overall Equipment Effectiveness)
Module 10	Lean implementation: Strategies and best practices for implementing Lean Manufacturing in an organization.

Where, When and How is it Taught?

TECH offers the possibility of doing this Executive Master's Degree in Lean Manufacturing completely online.

Throughout the 12 months of the educational program, you will be able to access all the contents of this program at any time, allowing you to self-manage your study time.

A unique, key, and decisive educational experience to boost your professional development and make the definitive leap.

tech 28 | Structure and Content

Mod	ule 1. Lean Manufacturing Principles a	and Context

5.9. 5.9.1. 5.9.2. 5.9.3.	automotive sector Example of application in the metallurgical sector	5.10.1 5.10.2	Pull system: Design, Implementation and Improvement of Production Processes. Practical Application Design of a pull system Implementation of the pull flow system Improvement of information in production processes				

Mod	ule 6. Lean quality management						
6.1. 6.1.1. 6.1.2. 6.1.3.	Production quality: consistency and conformity	6.2.1. 6.2.2. 6.2.3.	Quality measurement: quality indicators Definition of indicators Construction of indicators Examples of a quality scorecard		vision		Concept of "Genchi Genbutsu" (Gemba) and Quality Management. Relevance Concept of "Genchi Genbutsu" (Gemba) Application of the concept in practice. Example in the automotive sector Application of the concept in practice. Example from the capital goods sector
6.5.1. 6.5.2. 6.5.3.	Standardization and Simplification in quality management using "Standard Work". Standard Work. Concept and benefits Application of Standard Work in industry Example of the application of Standard Work	6.6. 6.6.1. 6.6.2. 6.6.3.	in a process The Jidoka philosophy for early detection of quality problems Detection of quality problems at source Production line stoppage Examples of the application of the Jidoka philosophy in industry	6.7. 6.7.1. 6.7.2. 6.7.3.	Management Definition, origin and benefits of Andon Andon types and examples	6.8. 6.8.1. 6.8.2. 6.8.3.	"Poka-Yoke. Quality Technology PokaYoke. Types and causes of errors that prevent Poka-yoke design process Examples of Poka- Yoke
6.9. 6.9.1. 6.9.2. 6.9.3.	Visual Management Process visualization Visual signage Visual records	6.10.1	Lean and IOT quality management and Blockchain Benefits of combining IoT and lean quality management Sensorization for process monitoring Real-time traceability systems and data analytics for quality management	6.10.2	2. Benefits of combining Lean and Blockchain in quality management. 2.1. Application of smart contracts for quality assurance and regulatory compliance 2.2. Design and implementation of a secure and scalable Blockchain infrastructure for quality management.		

Module 7. Continuous improvement, Kaizen 7.2. Implementation of the PDCA/ 7.3. Implementation of "6M" to 7.4. Statistical Methods of Process 7.1. Continuous Improvement and Kaizen in Lean Manufacturing PDSA cycle identify opportunities for Control 7.1.1. Continuous improvement and Kaizen 7.2.1. Plan 7.4.1. Process control and statistical methods in improvement 7.1.2. The PDCA/PDSA cycle. Comparison of 7.2.2. Do process control 7.3.1. Method Analysis problem solving methods 7.2.3. Check/Study 7.4.2. Statistics for process control 7.3.2. Machine Analysis 7.1.3. Encouraging the participation of the entire 7.2.4. Act 7.4.3. Common statistical methods in process 7.3.3. Materials Analysis organization in kaizen. 7.2.5. Application Examples control 7.3.4. Measurement system analysis 7.3.5. Analysis of the external environment 7.3.6. Analysis of the problems generated by People? 7.6. Application of the 5 S's in 7.5. Causal Analysis: Data Science 7.7. Continuous improvement and 7.8. Sustaining the Kaizen culture in 7.5.1. Ishikawa Diagram continuous improvement the long term 7.5.2. 5 reasons 7.6.1. Seiri (Classification): Elimination of 7.7.1. Real-time data collection for process 7.8.1. Long-term commitment of senior 7.5.3. Other techniques for root cause analysis unnecessary elements analysis management 7.6.2. Seiton (Order): Workplace organization 7.7.2. Process automation to reduce variability and 7.8.2. Integration of Kaizen as part of the 7.6.3. Seiso (Cleaning): Maintaining a clean and improve quality company's culture and not as an add-on/ orderly work environment 7.7.3. Efficiency improvement and cost reduction accessory. 7.6.4. Seiketsu (Standardization): Establishment of through remote process monitoring 7.8.3. Measuring results and long-term incentives standards and procedures for improvements, adapting them to the 7.6.5. Shitsuke (Discipline): Maintenance of organizational context standards and continuous improvement 7.9. Practical examples of 7.10. Future trends in continuous continuous improvement in improvement 7.10.1. Development of digital tools and platforms different industries for continuous improvement 7.9.1. Example in the automotive industry 7.10.2. Incorporation of new project management 7.9.2. Example in the food industry approaches: User-centered design and 7.9.3. Example in the construction supply industry evidence-based development 7.10.3. Incorporating emotional intelligence in continuous improvement

.1.	The organization of production in a Lean system	8.2.	Organizational differences between a traditional production	8.3.	Concept of "Work Cells" and their impact on efficiency and	8.4.	Implementation of "Continuous Improvement Teams" (Kaizen
3.1.1. 3.1.2. 3.1.3.	The Organization of Production. Key Concepts Company Structure and Organization Production systems and work organization	8.2.1. 8.2.2. 8.2.3.	system and a Lean system Types of organizational structure Organizational differences between a traditional system and a Lean system Organizational advantages of the Lean system	8.3.1. 8.3.2. 8.3.3.	continuous improvement Advantages of "Work Cells". Structure/ Types of "Work Cells". Management routines "Work Cells" to impact efficiency and continuous improvement	8.4.1. In in 8.4.2. Ad	Teams) to ensure a focus on continuous improvement and problem solving Incorporation of the Kaizen Teams Concept in the organization. Activities and methodology Kaizen Teams Roles and Responsibilities
8.5.1. 8.5.2. 8.5.3.	Importance of "Autonomy and Accountability" in the evolution towards a lean system and the improvement of efficiency and quality. Self-managed and agile teams as a key to organizational evolution The development of people as an added value to the Lean organization. Structure for leading "Autonomy and accountability" towards a Lean system	8.6.1. 8.6.2. 8.6.3.	Use of Standard Work to standardize processes and encourage continuous improvement Standard Work. Key Elements Benefits of Standard Work as an object of continuous improvement Implementation of Standard Work in organizations		polyvalence and training in lean organizations: The polyvalence matrix	8.8.1. 8.8.2. 8.8.3. 8.9.	Evolution of production organization through waste elimination and continuous improvement Analysis of non-value-adding activities as a basic Lean practice Waste elimination/reduction strategy Implementing a waste elimination/reduction model Implementation of Work Cells and continuous improvement groups in different industries. Practical Examples
8.9.1. 8.9.2. 8.9.3. 8.10.	Automotive Sector Implementation of work cells in the textile sector.	8.10.2	. Main aspects in the evolution towards a Lean system . Improved productivity and production organization . Utility of the Lean System for the evolution of the production organization.				

Module 9. TPM (Total Productive Maintenance), OEE (Overall Equipment Effectiveness) 9.1. TPM Total Productive 9.2. Improved machine efficiency 9.3. Techniques to Reduce Downtime 9.4. Equipment Maintenance Maintenance OEE: Problem Identification and in the Production Process. Management and Purchasing. 9.1.1. TPM Total Productive Maintenance. **Problem Solving Techniques** Maintenance Planning and **Decision Criteria** Fundamentals 9.2.1. Identification of efficiency problems 9.4.1. Technical requirements and specifications Programming 9.1.2. Emergence, objectives and benefits 9.2.2. Solving efficiency problems 9.4.2. Costs and investment 9.3.1. Production planning and maintenance 913 TPM Pillars 9.2.3. Machine efficiency monitoring 9.4.3. Supplier evaluation: criteria 9.3.2. Autonomous Maintenance 9.3.3. SMED 9.7. Safety Improvement Techniques 9.5. Preventative Maintenance 9.6. Predictive Maintenance 9.8. Guidance for the Implementation in the Production Process. Prevention of equipment failures Equipment failure prediction of TPM in the Organization, 9.5.1. Installation of the equipment: 9.6.1. Predictive Maintenance Identification and Elimination of Planning, Training and Maintainability criteria 9.6.2. Sensorization of equipment Hazards in the Workplace Implementation of Maintenance 9.5.2. Preventative Maintenance 9.6.3. Algorithm development with Al 9.7.1. Identification of hazards in the workplace Systems 9.5.3. Example of a preventive maintenance plan in 9.7.2. Risk assessment and protection measures 9.8.1. The 14 steps for TPM implementation the railway industry 9.7.3. Emergency Planning 9.8.2. Implementation planning 9.8.3. TPM training and maintenance 9.9. Improved energy efficiency: 9.10. Examples of TPM implementation 9.10.1. Example of application in the railway sector How to optimize energy use 9.10.2. Examples in the pharmaceutical sector and reduce costs through the 9.10.3. Example of application in the sector implementation of TPM 9.9.1. Energy efficiency of equipment 9.9.2. Measuring consumption and efficiency 9.9.3. Identification and elimination of energy losses and improvement

Module 10. Lean implementation: Strategies and best practices for implementing Lean Manufacturing in an organization.

10.1. Lean implementation. Project Start

- 10.1.1. Vision and reasons for change
- 10.1.2. Definition of the action framework and objectives
- 10.1.3. Selection of the initial project team
- 10.1.4. Definition of the Project Charter
- 10.2. Analysis of the current state of the company's processes: Evaluation and identification of areas for improvement and opportunities when implementing the Lean philosophy.
- 10.2.1. Identification of key processes
- 10.2.2. Analysis of the current state of the organization and processes.
- 10.2.3. Technical Analysis/Current culture and main management systems

- 10.3. Selection of a multidisciplinary work team to lead the Lean philosophy implementation project in the company.
- 10.3.1. Identification of necessary skills and competencies
- 10.3.2. Selection of persons
- 10.3.3. Formation of the Kaizen Teams

- 10.4. Definition and establishment of clear and measurable objectives for the implementation of the Lean philosophy in the company.
- 10.4.1. Definition of indicators
- 10.4.2. Measurement of Indicators
- 10.4.3. Definition of goals to be achieved at different horizons

10.5. Planning and development of the project to implement the Lean philosophy in the company. Allocation of resources and execution deadlines

- 10.5.1. Scope Definition
- 10.5.2. Definition of actions to be carried out and resources required
- 10.5.3. Definition of the calendar

10.6. Formation of the work team: Training in Lean methodology for the selected work team and other company employees.

- 10.6.1. Assessment of the knowledge/capabilities of the implementation team
- 10.6.2. Design of the training plan
- 10.6.3. Development of the training plan

10.7. Selection of the Pilots to be developed at the beginning

- 10.7.1. Criteria for selection of pilot scopes
- 10.7.2. Criteria for selection of persons to be involved who do not belong to the promoter's team
- 10.7.3. Initial evaluation before starting the pilots

10.8. Development and Implementation of Pilots and Quick Wins

- 10.8.1. Development of a detailed plan to implement Lean in the selected pilot processes.
- 10.8.2. Implementation of Quick Wins. Quick Wins Identification and Execution: Improvements to be implemented in the short term in the pilot processes
- 10.8.3. Continuous monitoring and adjustment of pilots to measure results and make adjustments as needed

10.9. Establishment of global performance indicators: Definition of indicators and key performance indicators (KPIs) to measure the success of the implementation of the Lean philosophy.

- 10.9.1. Definition of medium and long term SMART objectives
- 10.9.2. Definition of key indicators to be followed
- 10.9.3. Follow-up and communication of progress

10.10. Development of a plan to extend the Lean philosophy to the rest of the organization.

- 10.10.1. Identification of extension areas: criteria
- 10.10.2. Establishment of the extension plan: pace and resources
- 10.10.3. Project implementation, monitoring and communication

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning.**

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

tech 40 | Methodology

TECH Business School uses the Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

This program prepares you to face business challenges in uncertain environments and achieve business success.

Our program prepares you to face new challenges in uncertain environments and achieve success in your career.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch to present executives with challenges and business decisions at the highest level, whether at the national or international level. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and business reality is taken into account.

You will learn, through collaborative activities and real cases, how to solve complex situations in real business environments"

The case method has been the most widely used learning system among the world's leading business schools for as long as they have existed. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They must integrate all their knowledge, research, argue and defend their ideas and decisions.

tech 42 | Methodology

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines different teaching elements in each lesson.

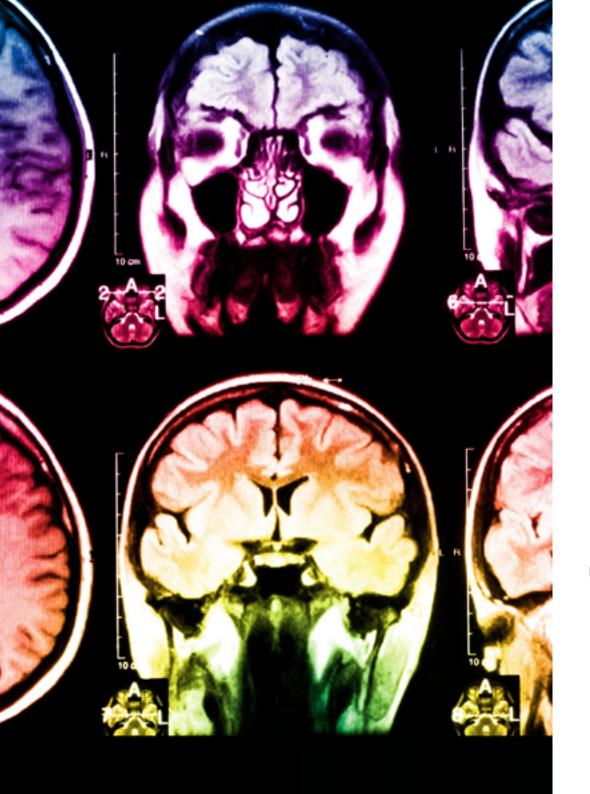

We enhance the Case Study with the best 100% online teaching method: Relearning.

Our online system will allow you to organize your time and learning pace, adapting it to your schedule. You will be able to access the contents from any device with an internet connection.

At TECH you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our online business school is the only one in the world licensed to incorporate this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

Methodology | 43 tech

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

tech 44 | Methodology

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

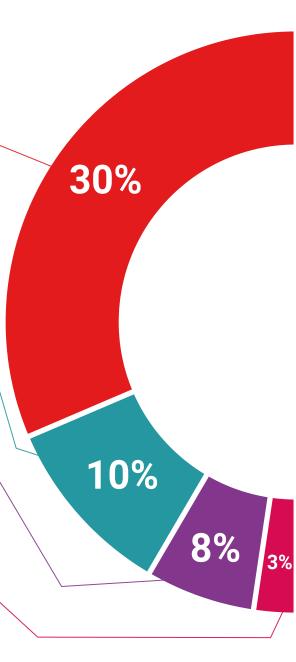

Management Skills Exercises

They will carry out activities to develop specific executive competencies in each thematic area. Practices and dynamics to acquire and develop the skills and abilities that a high-level manager needs to develop in the context of the globalization we live in.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Students will complete a selection of the best case studies chosen specifically for this program. Cases that are presented, analyzed, and supervised by the best senior management specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

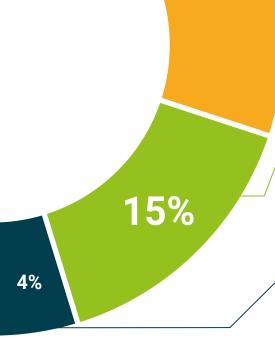

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

 (\wedge)

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.
