

Hybrid Master's Degree High Performance in Sports

Modality: Hybrid (Online + Clinical Internship)

Duration: 12 months

Certificate: TECH Global University

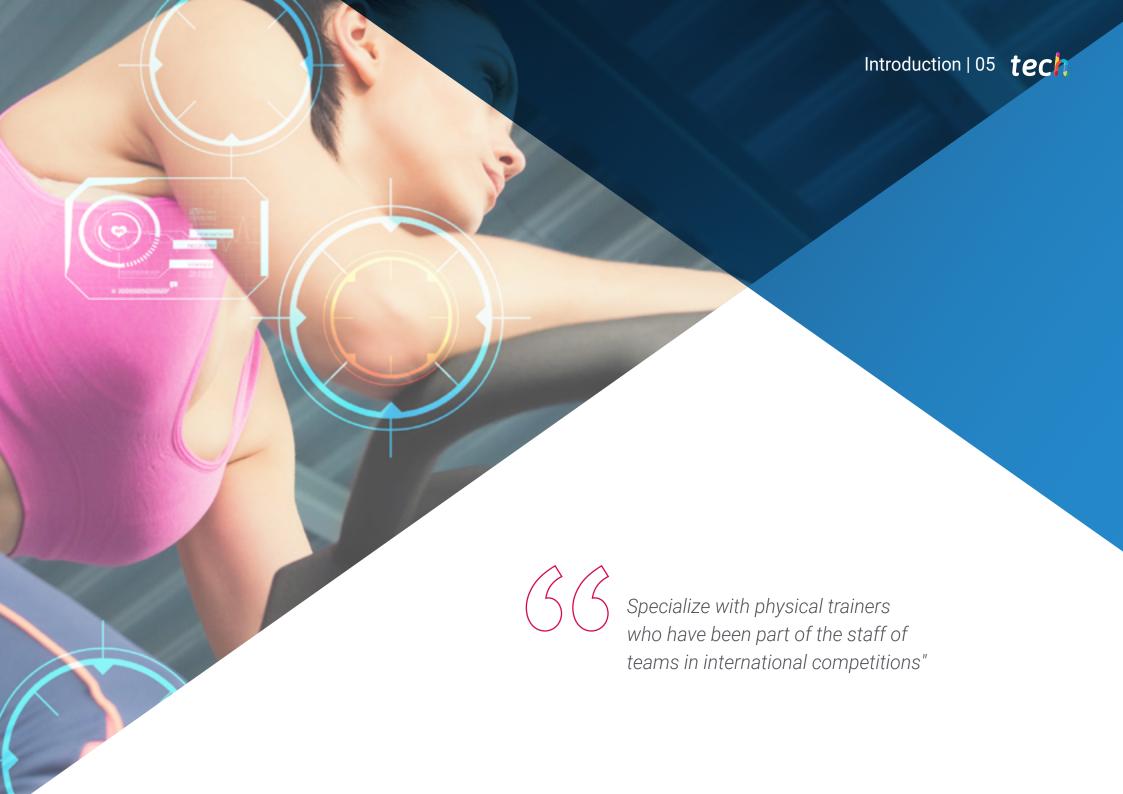

60 + 5 ECTS Credits

tech 06 | Introduction

High Performance training includes all aspects of sports work: agility, power, endurance, speed, balance and stability. All this requires a highly qualified professional who knows how to guide and instruct the professional athlete to achieve their goals.

In recent years, the physical trainer of athletes has made progress in the development of their training thanks to scientific support, which demonstrates the effectiveness and efficiency of each of the exercises depending on the sport discipline, the athlete and the moment in which they are in their competition. A system that can only be achieved with monitoring, evaluation and statistical analysis to show more accurately where the athlete is physically.

This Hybrid Master's Degree has a team of professional teachers with extensive experience in the sector, being part of the *staff* in different sports disciplines with teams and athletes who have participated in international competitions. This aspect is a guarantee for students who wish to learn the latest developments in the field of sports training.

In this course, students will be able to obtain a broad knowledge of the different training methods and proposals applied to any sport, whether it is soccer, rugby, field hockey, basketball, handball or athletics, among others. All this can be achieved thanks to a 100% online methodology in its theoretical framework, which gives you the flexibility to distribute the teaching load as you wish. You will only need a device with an internet connection to access the entire syllabus from day one. In addition, this program will be completed by a Internship Program that will allow you to advance in your career alongside professionals in High Performance Sports.

This **Hybrid Master's Degree in High Performance in Sports** contains the most complete and up-to-date scientific program on the market. The most important features include:

- Development of more than 100 cases presented by sports professionals with extensive experience in the sector
- Graphic, schematic and very practical contents are designed to provide scientific and assistance information on those disciplines that are essential for professional practice
- Exercises where the self-assessment process can be carried out to improve learning
- Algorithm-based interactive learning system for decision making
- Special emphasis on innovative methodologies in personal training
- All of this will be complemented by theoretical lessons, questions to the expert, debate forums on controversial topics, and individual reflection assignments
- Content that is accessible from any fixed or portable device with an Internet connection
- In addition, you will be able to do an internship in one of the best sports centers in the world

Introduction | 07 tech

66

Enroll in this program to progress in your professional career in the field of sports and acquire a specialization that will take you to the elite of sport"

In this proposal for a Hybrid Master's Degree, of a professionalizing nature and blended learning modality, the program is aimed at updating physical activity professionals who develop their functions in sports centers, and who require a high level of qualification. The contents are based on the latest scientific evidence, and oriented in a didactic way to integrate theoretical knowledge in sports practice, and the theoretical-practical elements will facilitate the updating of knowledge.

Thanks to multimedia content developed with the latest educational technology, professionals will enjoy a situated and contextual learning, which means, a simulated environment that will provide immersive learning programmed to prepare professionals for real situations. This program is designed around Problem-Based Learning, whereby the professional must try to solve the different professional practice situations that arise throughout the program. For this purpose, the students will be assisted by an innovative interactive video system created by renowned and experienced experts.

This Hybrid Master's Degree allows you to combine your personal responsibilities with quality learning.

Update your knowledge through the Hybrid Master's Degree program and help athletes reach the top of their careers.

Why Study this Hybrid Master's Degree?

In the world of sports performance, it is strictly necessary to have the most up-to-date concepts in strength, endurance or speed training for high performance athletes, all of them acquired on the basis of the latest scientific evidence. It is also essential that all this content is transferred to the practical aspect with maximum efficiency to perform the tasks of real advice to athletes. For this reason, TECH has chosen to create an academic product that will allow students to combine excellent theoretical learning with a 120-hour internship in a sports company, where they will apply innovative training planning techniques. This program, therefore, is a great ally for the student to reach a high level of theoretical and practical knowledge in the field of sports training, with full real applicability and adapted to the needs of the market.

tech 10 | Why Study this Hybrid Master's Degree?

1. Updating from the Latest Technology Available

In recent years, the area of High Performance Sports has experienced the emergence of new methods to evaluate the work of athletes, the use of modern resistance training systems or the application of more effective nutritional strategies. Because of this, this TECH program will provide you with the most up-to-date skills in this field to be in tune with the needs of this sector.

2. Gaining In-depth Knowledge from the Experience of Top Specialists

This program is taught by professionals actively working in the world of training for high performance athletes, who are in charge of developing all the didactic contents of the program. Therefore, all the knowledge that will be offered to the students throughout this Hybrid Master's Degree will be fully applicable to work in this sector.

3. Entering First-Class Sports Environments

TECH carefully selects all the centers available for its Internship Programs, which you will access at the end of the theoretical stage. In this line, the student will develop in an excellent training center oriented to High Performance Sports. In this way, it will determine the day-to-day work carried out in this field and apply the latest trends in this area.

Why Study this Hybrid Professional | 11 tech Master's Degree?

4. Combining the Best Theory with State-of-the-Art Practice

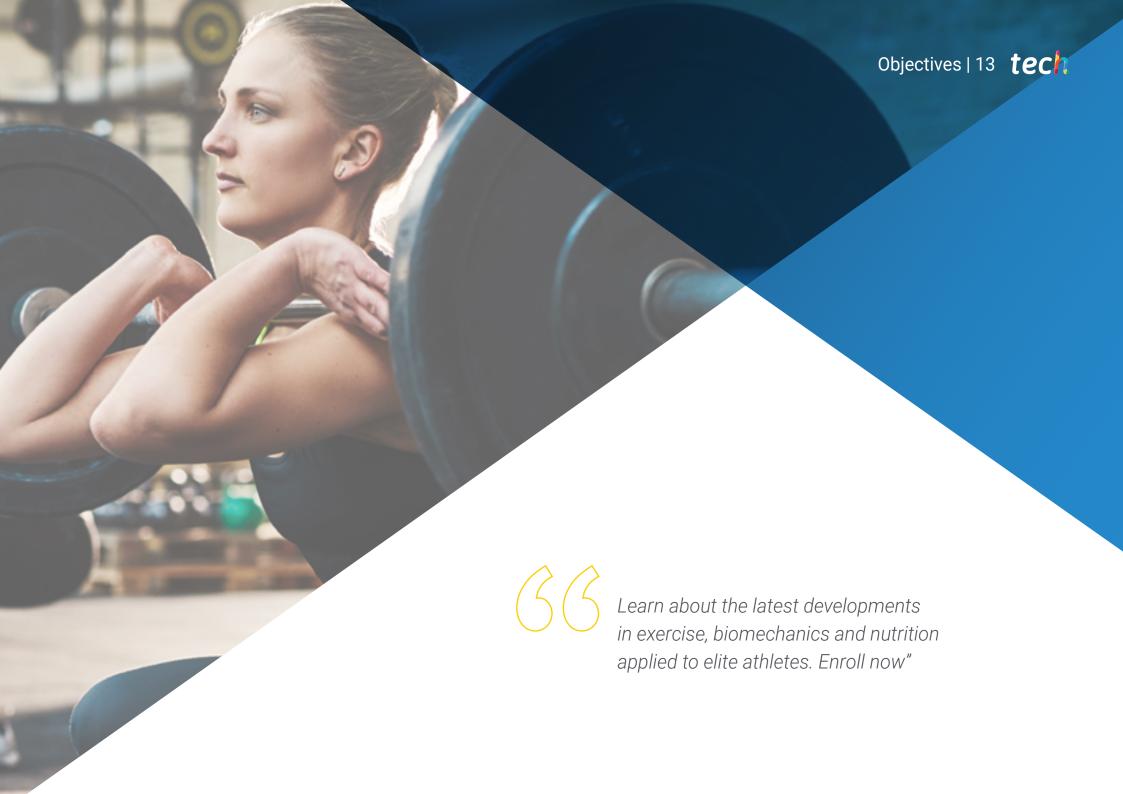

The educational market has a wide variety of academic programs focused solely on the delivery of theoretical content. However, this program offers students the opportunity to combine excellent theoretical learning with a 3-week internship in a high-level professional environment.

5. Expanding the Boundaries of Knowledge

TECH offers the possibility of carrying out the Internship Program of this Hybrid Master's Degree Program not only in centers of international importance. In this way, the specialist will be able to expand their boundaries and keep up to date with the best professionals, who practice in first class sports centers and in different continents. A unique opportunity that only TECH, the largest online university in the world, could offer.

tech 14 | Objectives

General Objective

The general objective of this program is to enable students to master and apply with
certainty the most current training methods, thanks to the extensive knowledge of
statistics, the use of data obtained from the athlete, and research processes. Students
will also be able to evaluate sports performance and understand the principles governing
exercise physiology, biochemistry, biomechanics and nutrition

This 100% online program in its theoretical framework will allow you to learn about the latest technology applied in the evaluation of athletes".

Specific Objectives

Module 1. Exercise Physiology and Physical Activity

- Specialize and interpret key aspects of biochemistry and thermodynamics
- Gain in-depth knowledge of the energy metabolic pathways and their exercise-mediated modifications and their role in human performance
- Learn key aspects of the neuromuscular system, motor control and its role in physical training
- In-depth knowledge of muscle physiology, the process of muscle contraction and the molecular basis of this process
- Specialize in the functioning of the cardiovascular and respiratory systems and oxygen utilization during exercise
- Determine the general causes of fatigue and its impact on different types and modalities of exercise
- Analyze the different physiological milestones and their application in practice

Module 2. Statistics Applied to Performance and Research

- Develop the ability to analyze data collected in the laboratory and in the field through various assessment tools
- Describe the different types of statistical analysis and their application in various situations for the understanding of phenomena that occur during training
- Develop strategies for data exploration to determine the best models to describe them
- Establish the generalities of predictive models through regression analysis that favor the incorporation of different units of analysis in the training field
- Generate the conditions for the correct interpretation of results in different types of research

tech 16 | Objectives

Module 3. Strength Training, from Theory to Practice

- · Correctly interpret all theoretical aspects defining strength and its components
- Master the most effective strength training methods
- Develop sufficient criteria to be able to support the choice of different training methods in their practical application
- Be able to objectify the strength needs of each athlete
- Master the theoretical and practical aspects that define power development
- Correctly apply strength training in the prevention and rehabilitation of injuries

Module 4. Speed Training, from Theory to Practice

- Interpret the key aspects of speed and change of direction technique
- Compare and differentiate the speed of situational sport with respect to the track and field model
- Incorporate elements of observational judgment, a technique that allows discrimination of errors in the mechanics of the race and the procedures for their correction
- Become familiar with the bioenergetic aspects of single and repeated sprinting and how they relate to the training processes
- Differentiate the mechanical aspects that may influence performance impairment and the mechanisms of injury occurrence when sprinting
- Apply in an analytical way the different means and methods of training for the development of the different phases of speed
- Program speed training in situational sports

Module 5. Endurance Training from Theory to Practice

- Study the different adaptations generated by aerobic endurance
- Apply the physical demands of situational sports
- Select the most appropriate tests to evaluate, monitor, tabulate and fractionate aerobic workloads
- Carry out the different methods to organize training sessions
- Design training sessions taking into account the sport

Module 6. Mobility: from Theory to Performance

- · Approach mobility as a basic physical capacity from a neurophysiological perspective
- Have a deep understanding of the neurophysiological principles that affect the development of mobility
- Apply stabilizing and mobilizing systems within the movement pattern
- Unpack and specify the basic concepts and objectives related to mobility training
- Develop the ability to design tasks and plans for the development of manifestations of mobility
- · Apply the different methods of performance optimization through recovery methods
- Develop the ability to carry out a functional and neuromuscular assessment of the athlete
- Recognize and address the effects produced by an injury at the neuromuscular level in the athlete

Module 7. Sports Performance Assessment

- Become familiar with different types of assessment and their applicability to the field of practice
- Select the most appropriate tests for your specific needs
- Correctly and safely administer the protocols of the different tests and the interpretation of the data collected
- Apply different types of technologies currently used in the field of exercise assessment, whether in the field of health and fitness performance at any level of demand

Module 8. Planning Applied to High Performance in Sports

- Understand the internal logic of planning, such as its proposed core models
- Apply the Dose-Response concept in training
- Clearly differentiate the impact of programming with planning and its dependencies
- Acquire the ability to design different planning models according to the work reality
- Apply the concepts learned in an annual and/or multi-year planning design

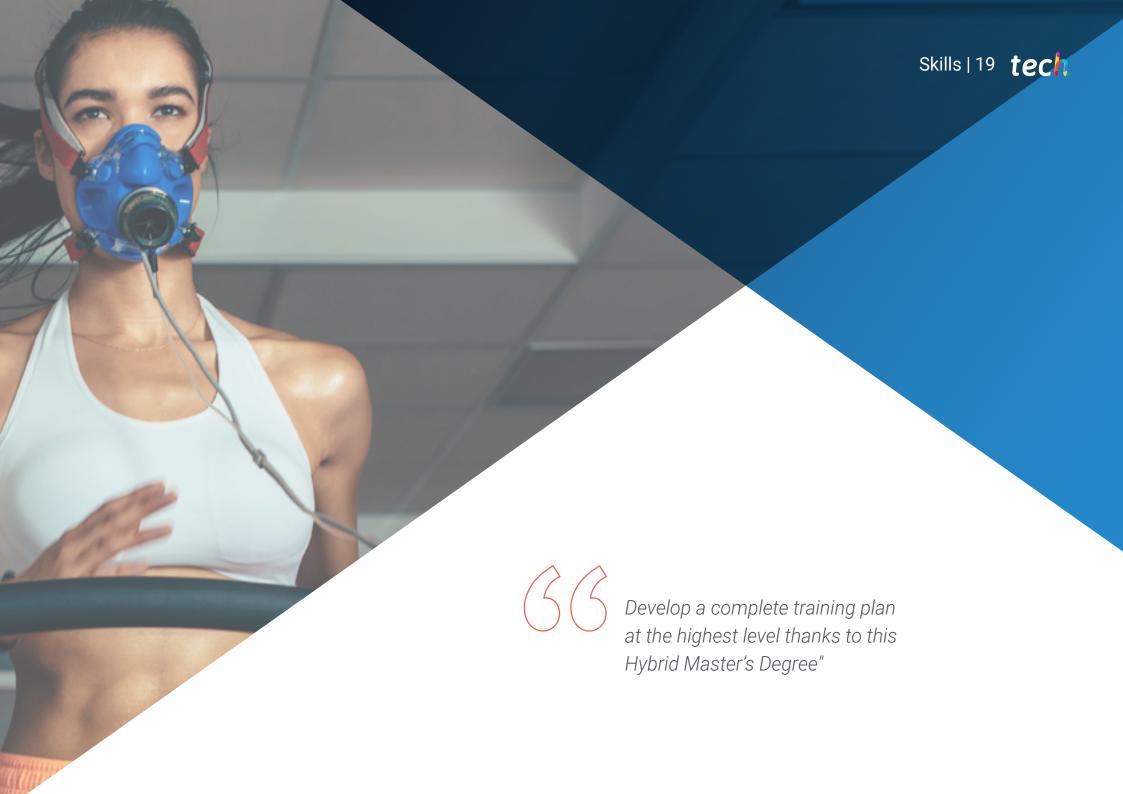

Module 9. Biomechanics Applied to High-Performance Sports

- Specialize in the principles of Biomechanics oriented to physical education and Sport
- Apply the basic knowledge and technologies of biomechanics as a function of physical education, sport, performance and daily life
- Value the importance of protocols and the different types of biomechanical evaluation as a fundamental factor in the process of sports development and assessment
- Develop critical and analytical thinking that will allow him/her to generate innovative protocols and procedures, with different types of technology

Module 10. Nutrition Applied to High-Performance Sports

- Learn the physiological and biochemical bases of energy metabolism during physical
- Learn the processes and methods of nutritional assessment of the athlete, as well as his body composition
- Understand the different options for the evaluation of the athlete's energy output
- Use all the variables available in nutrition for sports disciplines of very different characteristics
- Familiarize yourself with the latest scientific evidence on sports supplementation
- Handle the nutritional aspects that are associated with eating disorders and sports injuries

tech 20 | Skills

General Skills

- Acquire knowledge based on the most current scientific evidence with full applicability in the practical field
- To master all the most advanced methods of sports performance evaluation

Boost your career path with holistic teaching, allowing you to advance both theoretically and practically"

Specific Skills

- Learn key aspects of the neuromuscular system, motor control and its role in physical training
- Describe the different types of statistical analysis and their application in various situations for the understanding of phenomena that occur during training
- Incorporate elements of judgment of technical observation that make it possible to discriminate errors in the mechanics of the race and the procedures for their correction
- Select the most appropriate tests to evaluate, monitor, tabulate and fractionalize aerobic workloads
- Apply stabilizing and mobilizing systems within the movement pattern
- Unpack and specify the basic concepts and objectives related to mobility training
- Correctly and safely administer the protocols of the different tests and the interpretation of the data collected
- Apply the concepts learned in an annual and/or multi-year planning design
- Apply the basic knowledge and technologies of biomechanics as a function of physical education, sport, performance and daily life
- Handle the nutritional aspects that are associated with eating disorders and sports injuries

33

This Hybrid Master's Degree brings you closer to the High Performance in Sports by the hand of physical trainers of great international level"

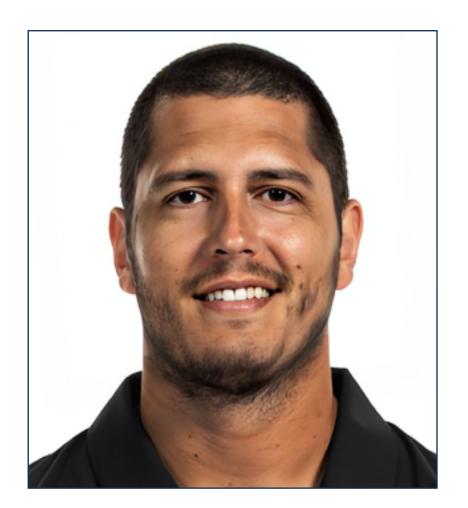

International Guest Director

Tyler Friedrich, Ph.D., is a leading personality in the international field of Sports Performance and Applied Sports Science. With a strong academic background, he has demonstrated an exceptional commitment to excellence and innovation, and has contributed to the success of numerous elite athletes internationally.

Throughout his career, Tyler Friedrich has deployed his expertise in a wide range of sporting disciplines, from football to swimming, volleyball to field hockey. His work in performance data analysis, especially through the Catapult athlete GPS system, and his integration of sports technology into performance programs, has established him as a leader in athletic performance optimization.

As Director of Sports Performance and Applied Sports Science, Dr. Friedrich has led strength and conditioning training, as well as the implementation of specific programs for several Olympic sports, including volleyball, rowing and gymnastics. Here, he has been responsible for integrating equipment services, sports performance in soccer and sports performance in Olympic sports. In addition, incorporating DAPER sports nutrition within an athlete performance team.

Also certified by USA Weightlifting and the National Strength and Conditioning Association, he is recognized for his ability to combine theoretical and practical knowledge in the development of high performance athletes. In this way, Dr. Tyler Friedrich has left an indelible mark on the world of Sports Performance, being an outstanding leader and driver of innovation in his field.

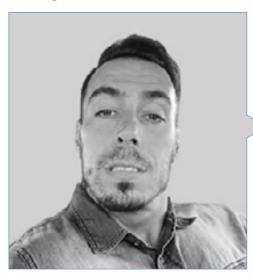

Dr. Friedrich, Tyler

- · Director of Sports Performance and Applied Sports Science at Stanford University
- · Sports Performance Specialist
- · Associate Director of Athletics and Applied Performance at Stanford University
- · Director of Olympic Sport Performance at Stanford University
- · Sports Performance Coach at Stanford University
- Ph.D. in Philosophy, Health and Human Performance from Concordia University Chicago
- · Master of Science in Exercise Science from the University of Dayton
- · Bachelor of Science, Exercise Physiology from the University of Dayton

Management

Dr. Rubina, Dardo

- Specialist in High Performance Sports
- CEO of Test and Training
- Physical Trainer at Moratalaz Sports School
- Teacher of Physical Education in Football and Anatomy. CENAFE Schools Carlet
- Coordinator of Physical Preparation in Field Hockey. Club Gimnasia y Esgrima de Buenos Aires
- Doctorate in High Performance Sports
- Postgraduate Certificate in Advanced Research Studies (DEA), University of Castilla la Mancha
- Master in High Performance Sports by the Autonomous University of Madrid
- Postgraduate in Physical Activity in Populations with Pathologies by the University of Barcelona
- Competitive Bodybuilding Technician. Extremadura Federation of Bodybuilding and Fitness
- Expert in Sports Scouting and Quantification of Training Load (specialization in Soccer), Sports Sciences. University of Melilla
- Expert in Advanced Weight Training by IFBB
- Expert in Advanced Nutrition by IFBB
- Specialist in Physiological Assessment and Interpretation of Physical Fitness by Bio
- Certification in Technologies for Weight Control and Physical Performance. Arizona State University

Professors

Carbone, Leandro

- Teacher of Strength Training and Fitness Training
- · CEO of LIFT, training and education company
- Head of the Department of Sports Evaluations and Exercise Physiology. WellMets Institute of Sports and Medicine in Chile
- CEO/ Manager at Complex I
- University Teacher
- External Consultant for Speed4lift, a leading company in the area of Sports Technology
- · Degree in Physical Activity from the Universidad del Salvador
- Specialist in Exercise Physiology, Universidad Nacional de La Plata
- MCs. Strength and Conditioning at Greenwich University, United Kingdom

Dr. Represas Lobeto, Gustavo Daniel

- Physical trainer and researcher oriented to High Performance Sports
- Responsible for the Laboratory of Sports Biomechanics of the National Center of High Performance Sports of Argentina
- Responsible for the Laboratory of Biomechanics, Functional Analysis of Movement and Human Performance at the National University of San Martín
- Physical trainer and Scientific Advisor of the Olympic Taekwondo team for the Sydney Olympic Games
- Physical trainer for professional rugby clubs and players
- Teacher in university studies
- PhD in High Performance Sports from the University of Castilla-La Mancha
- Degree in Physical Education and Sports from the Universidad Abierta Interamericana
- Master in High Performance Sports by the Autonomous University of Madrid
- National Physical Education Teacher

Dr. Del Rosso, Sebastián

- Expert Researcher in Sports Biochemistry
- Postdoctoral Researcher at the Center for Research in Clinical Biochemistry and Immunology
- Researcher in the Lifestyle and Oxidative Stress Research Group
- Co-author of numerous scientific publications
- Director of the Editorial Board of PubliCE Standard magazine
- Director of the Editorial Department of Grupo Sobre Entrenamiento
- PhD in Health Sciences from the National University of Córdoba
- Degree in Physical Education from the National University of Catamarca
- · Master's Degree in Physical Education from the Catholic University of Brasilia

Mr. Añon, Pablo

- Physical trainer of the Women's National Volleyball Team for the Olympic Games
- Physical trainer of volleyball teams of the Argentine Men's First Division
- Physical trainer of professional golfers Gustavo Rojas and Jorge Berent
- Swimming coach of Quilmes Atlético Club
- National Teacher of Physical Education INEF in Avellaneda
- Postgraduate Degree in Sports Medicine and Applied Sports Sciences from the Universidad de la Plata
- Master in High Performance Sports by the Catholic University of Murcia
- Training courses oriented to the field of High Performance Sports

tech 28 | Course Management

Mr. Vaccarini, Adrián Ricardo

- Physical Trainer Specializing in Top Level Soccer
- Responsible for the area of Applied Sciences of the Peruvian Football Federation
- Second Physical Trainer of the Peruvian National Senior Soccer Team
- Physical Trainer of the Peruvian Sub 23 National Team
- Responsible for the research and performance analysis area of Quilmes
- Responsible for the research and performance analysis area of Velez Sarsfield
- Regular speaker at High Performance Sport Congresses
- Degree in Physical Education
- National Physical Education Teacher

Mr. César García, Gastón

- Expert Hockey and Rugby Physical Trainer
- Physical Trainer of the professional field hockey player Sol Alias
- Physical Trainer of Carmen Tenis Club Hockey Team
- Personal Trainer of Rugby and Hockey athletes
- Physical Trainer for U18 Rugby clubs
- Physical Education Teacher for children
- Co-author of the book Estrategias para la evaluación de la condición física en niños y adolescentes
- Degree in Physical Education from the National University of Catamarca
- National Physical Education Teacher by the ESEF of San Rafael
- Technician in Anthropometry level 1 and 2

Course Management | 29 tech

Mr. Díaz Jareño, Juan

- Specialist in Physical Preparation and Sport
- Coordinator of the Physical Education and Preparation Area at the Moratalaz Sports School
- University Tteacher
- Personal Trainer and Sports Rehabilitator at the 9.8 Gravity Training Studio
- Graduate in Physical Activity and Sport Sciences from the University of Castilla-La Mancha}
- Master's Degree in Physical Preparation in Football by the University of Castilla-La Mancha
- Postgraduate Degree in Personal Training from the University of Castilla-La Mancha

Ms. González Cano, Henar

- Sports nutritionist
- Nutritionist and Anthropometrist at GYM SPARTA
- Nutritionist and Anthropometrist at Promentium Center
- Nutritionist in men's soccer teams
- Teacher in courses related to Strength and Physical Conditioning
- Speaker at training events on Sports Nutrition
- Graduate in Human Nutrition and Dietetics from the University of Valladolid
- Master in Nutrition in Physical Activity and Sport by the Catholic University San Antonio of Murcia
- Course in Nutrition and Dietetics applied to physical exercise by the University of Vich

Mr. Masse, Juan Manuel

- Physical trainer for high performance athletes
- Director of the Athlon Science Study Group
- Physical trainer for several professional soccer teams in South America

06 Educational Plan

The syllabus of this program comprises 10 modules covering exercise physiology and physical activity, strength training with and without machines, exercises for speed improvement, statistics applied to performance and research, as well as the most effective nutrition for elite athletes. The video summaries of each topic, the specific additional readings and the Relearning learning system, based on the reiteration of content, will facilitate the consolidation of knowledge of eminently practical application in the day-to-day life of any coach of high-level athletes.

tech 32 | Educational Plan

Module 1. Exercise Physiology and Physical Activity

- 1.1. Thermodynamics and Bioenergetics
 - 1.1.1. Definition
 - 1.1.2. General concepts
 - 1.1.2.1. Organic Chemistry
 - 1.1.2.2. Functional Groups
 - 1.1.2.3. Enzymes
 - 1.1.2.4. Coenzymes
 - 1.1.2.5. Acids and Bases
 - 1.1.2.6. PH
- 1.2. Energy Systems
 - 1.2.1. General Concepts
 - 1.2.1.1. Capacity and Power
 - 1.2.1.2. Cytoplasmic Vs. Mitochondrial
 - 1.2.2. Phosphagen Metabolism
 - 1.2.2.1. ATP PC
 - 1.2.2.2. Pentose Pathway
 - 1.2.2.3. Nucleotide Metabolism
 - 1.2.3. Carbohydrate Metabolism
 - 1.2.3.1. Glycolysis
 - 1.2.3.2. Glycogenogenesis
 - 1.2.3.3. Glycogenolysis
 - 1.2.3.4. Gluconeogenesis
 - 1.2.4. Lipid Metabolism
 - 1.2.4.1. Bioactive Lipids
 - 1.2.4.2. Lipolysis
 - 1.2.4.3. Beta-oxidation
 - 1.2.4.4. De Novo Lipogenesis
 - 1.2.5. Oxidative Phosphorylation
 - 1.2.5.1. Oxidative Decarboxylation of Pyruvate
 - 1.2.5.2. Krebs Cycle
 - 1.2.5.3. Electron Transport Chain
 - 1.2.5.4. ROS
 - 1.2.5.5. Mitochondrial Cross-talk

- 1.3. Signaling Pathways
 - 1.3.1. Second Messengers
 - 1.3.2. Steroid Hormones
 - 1.3.3. AMPK
 - 1.3.4. NAD+
 - 1.3.5. PGC1
- 1.4. Skeletal Muscle
 - 1.4.1. Structure and Function
 - 1.4.2. Fibers
 - 1.4.3. Innervation
 - 1.4.4. Muscle Cytoarchitecture
 - 1.4.5. Protein Synthesis and Breakdown
 - 1.4.6. mTOR
- 1.5. Neuromuscular Adaptations
 - 1.5.1. Motor Unit Recruitment
 - 1.5.2. Synchronization
 - 1.5.3. Neural Drive
 - .5.4. Golgi Tendon Organ and Neuromuscular Spindle
- 1.6. Structural Adaptations
 - 1.6.1. Hypertrophy
 - 1.6.2. Mecano Signal Transduction
 - 1.6.3. Metabolic Stress
 - 1.6.4. Muscle Damage and Inflammation
 - 1.6.5. Changes in Muscular Architecture
- 1.7. Fatique
 - 1.7.1. Central Fatigue
 - 1.7.2. Peripheral Fatigue
 - 1.7.3. HRV
 - 1.7.4. Bioenergetic Model
 - 1.7.5. Cardiovascular Model
 - 1.7.6. Thermoregulator Model
 - 1.7.7. Psychological Model
 - 1.7.8. Central Governor Model

- 1.8. Maximum Oxygen Consumption
 - 1.8.1. Definition
 - 1.8.2. Assessment
 - 1.8.3. VO2 Kinetics
 - 1.8.4. VAM
 - 1.8.5. Running Economics
- 1.9. Thresholds
 - 1.9.1. Lactate and Ventilatory Threshold
 - 1.9.2. MLSS
 - 1.9.3. Critical Power
 - 1.9.4. HIIT and LIT
 - 1.9.5. Anaerobic Speed Reserve
- 1.10. Extreme Physiological Conditions
 - 1.10.1. Height
 - 1.10.2. Temperature
 - 1.10.3. Diving

Module 2. Statistics Applied to Performance and Research

- 2.1. Notions of Probability
 - 2.1.1. Simple Probability
 - 2.1.2. Conditional Probability
 - 2.1.3. Bayes' Theorem
- 2.2. Probability Distributions
 - 2.2.1. Binomial Distribution
 - 2.2.2. Poisson distribution
 - 2.2.3. Normal Distribution
- 2.3. Statistical Inference
 - 2.3.1. Population Parameters
 - 2.3.2. Estimation of Population Parameters
 - 2.3.3. Sampling Distributions Associated with the Normal Distribution
 - 2.3.4. Distribution of the Sample Mean
 - 2.3.5. Point Estimators
 - 2.3.6. Properties of Estimators
 - 2.3.7. Estimator Comparison Criteria

- 2.3.8. Estimators by Confidence Regions
- 2.3.9. Method of Obtaining Confidence Intervals
- 2.3.10 Confidence Intervals Associated With Normal Distribution
- 2.3.11. Central Limit Theorem
- 2.4. Hypothesis Test
 - 2.4.1. P-Value
 - 2.4.2. Statistical Power
- 2.5. Exploratory Analysis and Descriptive Statistics
 - 2.5.1. Graphs and Tables
 - 2.5.2. Chi-Square Test
 - 2.5.3. Relative Risk
 - 2.5.4. Odds Ratio
- 2.6. The T-Test
 - 2.6.1. One-Sample T-Test
 - 2.6.2. T-Test for Two Independent Samples
 - 2.6.3. T-Test for Paired Samples
- 2.7. Correlation Analysis
- 2.8. Simple Linear Regression Analysis
 - 2.8.1. The Regression Line and its Coefficients
 - 2.8.2. Residuals
 - 2.8.3. Regression Assessment Using Residuals
 - 2.8.4. Coefficient of Determination
- 2.9. Variance and Analysis of Variance (ANOVA)
 - 2.9.1. One-way ANOVA
 - 2.9.2. Two-Way ANOVA
 - 2.9.3. ANOVA for Repeated Measures
 - 2.9.4. Factorial ANOVA

Module 3. Strength Training, from Theory to Practice

- 3.1. Strength: Conceptualization
 - 3.1.1. Strength Defined from a Mechanical Point of View
 - 3.1.2. Strength Defined from a Physiology Point of View
 - 3.1.3. Define the Concept of Applied Strength

tech 34 | Educational Plan

	3.1.4.	Time-Strength Curve	3.4.	Plyome	etric Method
		3.1.4.1. Interpretation		3.4.1.	Physiological Mechanisms
	3.1.5.	Define the Concept of Maximum Strength			3.4.1.1. Specific General Information
	3.1.6.	Define the Concept of RFD		3.4.2.	Muscle Actions in Plyometric Exercises
	3.1.7.	Define the Concept of Useful Strength		3.4.3.	The Stretch-Shortening Cycle (SSC)
	3.1.8.	Strength- Speed-Power Curves			3.4.3.1. Use of Energy or Elastic Capacity
		3.1.8.1. Interpretation			3.4.3.2. Reflex Involvement Series and Parallel Elastic Energy Accumulation
	3.1.9.	Define the Concept of Strength Deficit		3.4.4.	CEA Classification Scheme
3.2.	Training Load				3.4.4.1. Short CEA
	3.2.1.	Define the Concept of Strength Training Load			3.4.4.2. Long CEA
	3.2.2.	Define the Concept of Load		3.4.5.	Properties of the Muscle and Tendon
	3.2.3.	Load Concept: Volume		3.4.6.	Central Nervous System
		3.2.3.1. Definition and Applicability in Practice			3.4.6.1. Recruitment
	3.2.4.	Load Concept: Intensity			3.4.6.2. Frequency (F)
		3.2.4.1. Definition and Applicability in Practice			3.4.6.3. Synchronization
	3.2.5.	Load Concept: Density		3.4.7.	Practical Considerations
		3.2.5.1. Definition and Applicability in Practice	3.5.	Power Training	
	3.2.6.	Define the Concept of Effort Character		3.5.1.	Definition of Power
		3.2.6.1. Definition and Applicability in Practice			3.5.1.1. Conceptual Aspects of Power
3.3.	Strengt	Strength Training in the Prevention and Rehabilitation of Injuries			3.5.1.2. The Importance of Power in a Context of Sport Performance
	3.3.1.	Conceptual and Operational Framework in Injury Prevention and Rehabilitation			3.5.1.3. Clarification of Power Terminology
		3.3.1.1. Terminology		3.5.2.	Factors Contributing Peak Power Development
		3.3.1.2. Concepts		3.5.3.	Structural Aspects Conditioning Power Production
	3.3.2.				3.5.3.1. Muscle Hypertrophy
		Evidence			3.5.3.2. Muscle Structure
	3.3.3.				3.5.3.3. Ratio of Fast and Slow Fibers in a Cross Section
		Recovery 3.3.3.1. Defining the Method			3.5.3.4. Muscle Length and its Effect on Muscle Contraction
		3.3.3.2. Applying the Method in Practice			3.5.3.5. Quantity and Characteristics of Elastic Components
	3.3.4.	Role of Core Stability (<i>Core</i>) in Injury Prevention		3.5.4.	Neural Aspects Conditioning Power Production
	J.J.4.	3.3.4.1. Definition of Core			
		3.3.4.2. Core Training			
		o.o.4.z. Gote Halling			

Educational Plan | 35 tech

		3.5.4.1. Action Potential
		3.5.4.2. Speed of Motor Unit Recruitment
		3.5.4.3. Muscle Coordination
		3.5.4.4. Intermuscular Coordination
		3.5.4.5. Prior Muscle Status (PAP)
		3.5.4.6. Neuromuscular Reflex Mechanisms and Their Incidence
	3.5.5.	Theoretical Aspects for Understanding the Strength-Time Curve
		3.5.5.1. Strength Impulse
		3.5.5.2. Phases of the Strength-Time Curve
		3.5.5.3. Phases of Acceleration in the Strength-Time Curve
		3.5.5.4. Maximum Acceleration Area of the Strength-Time Curve
		3.5.5.5. Deceleration Phase of the Strength-Time Curve
	3.5.6.	Theoretical Aspects for Understanding Power Curves
		3.5.6.1. Energy-Time Curve
		3.5.6.2. Energy-Displacement Curve
		3.5.6.3. Optimal Workload for Maximum Energy Development
	3.5.7.	Practical Considerations
3.6.	Vector	Strength Training
	3.6.1.	Definition of Force Vector
		3.6.1.1. Axial Vector
		3.6.1.2. Horizontal Vector
		3.6.1.3. Rotational Vector
	3.6.2.	Benefits of Using this Terminology
	3.6.3.	Definition of Basic Vectors in Training
		3.6.3.1. Analysis of the Main Sporting Actions
		3.6.3.2. Analysis of the Main Overload Exercises
		3.6.3.3. Analysis of the Main Training Exercises
	3.6.4.	Practical Considerations
3.7.	Main M	lethods for Strength Training
	3.7.1.	Own Body Weight
	3.7.2.	Free Exercises
	3.7.3.	PAP

	3.7.3.2. Application of PAP Prior to Energy-Related Sports Disciplines
3.7.4.	Exercises with Machines
3.7.5.	Complex Training
3.7.6.	Exercises and Their Transfer
3.7.7.	Contrasts
3.7.8.	Cluster Training
3.7.9.	Practical Considerations
VBT	
3.8.1.	Conceptualization of the Application of VBT
	3.8.1.1. Degree of Stability of Execution Speed with Each Percentage of 1MR
3.8.2.	Difference Between Scheduled Load and Actual Load
	3.8.2.1. Definition of the Concept
	3.8.2.2. Variables Involved in the Difference Between Programmed Load and
	Actual Training Load
3.8.3.	VBT as a Solution to the Problem of Using 1MR and nMR to Program Loads
3.8.4.	VBT and Degree of Fatigue
	3.8.4.1. Connection to Lactate
	3.8.4.2. Connection to Ammonium
3.8.5.	VBT in Relation to the Loss of Speed and Percentage of Repetitions Performed
	3.8.5.1. Define the Different Degrees of Effort in the Same Series
	3.8.5.2. Different adaptations according to the degree of speed loss in the series
3.8.6.	Methodological Proposals According to Different Authors
3.8.7.	Practical Considerations
Strength	n in Connection to Hypertrophy
3.9.1.	Hypertrophy-Inducing Mechanism: Mechanical Stress
3.9.2.	Hypertrophy-Inducing Mechanism: Metabolic Stress
3.9.3.	Hypertrophy-Inducing Mechanism: Muscle Damage
3.9.4.	Hypertrophy Programming Variables

Лod	ule 4. S	speed Training, from Theory to Practice
		<u> </u>

4.1. Speed

- 4.1.1. Definition
- 4.1.2. General concepts
 - 4.1.2.1. Manifestations of Speed
 - 4.1.2.2. Factors that Determine Performance
 - 4.1.2.3. Difference Between Speed and Quickness
 - 4.1.2.4. Segmental Speed
 - 4.1.2.5. Angular Speed
 - 4.1.2.6. Reaction Time

- Dynamics and Mechanics of Linear Sprint (100m Model)
 - 4.2.1. Kinematic Analysis of the Take-off
 - Dynamics and Strength Application During Take-off 4.2.2.
 - Kinematic Analysis of the Acceleration Phase 423
 - 4.2.4. Dynamics and Strength Application During Acceleration
 - 4.2.5. Kinematic Analysis of Running at Maximum Speed
 - Dynamics and Strength Application During Maximum Speed
- 4.3. Phases of Sprinting (Technique Analysis)
 - 4.3.1. Technical Description of the Take-off
 - 4.3.2. Technical Description of the Race During the Acceleration Phase 4.3.2.1. Technical Model of the Kinogram for the Acceleration Phase
 - 4.3.3. Technical Description of the Race During the Maximum Speed Phase 4.3.3.1. Technical Kinogram Model (ALTIS) for Technique Analysis
 - 4.3.4. Speed Endurance
- 4.4. Speed Bioenergetics
 - 4.4.1. Bioenergetics of Single Sprints
 - 4.4.1.1. Myoenergetics of Single Sprints
 - 4.4.1.2. ATP-PC System
 - 4.4.1.3. Glycolytic System
 - 4.4.1.4. Adenylate Kinase Reaction
 - 4.4.2. Bioenergetics of Repeated Sprints
 - 4.4.2.1. Energy Comparison Between Single and Repeated Sprints
 - 4.4.2.2. Behavior of Energy Production Systems During Repeated Sprints
 - 4.4.2.3. Recovery of PC
 - 4.4.2.4. Connection Between Aerobic Power and Recovery Processes of PC
 - 4.4.2.5. Determinants of Performance in Repeated Sprints
- 4.5. Analysis of Acceleration Technique and Maximum Speed in Team Sports
 - 4.5.1. Description of the Technique in Team Sports
 - 4.5.2. Comparison of Sprinting Technique in Team Sports vs. Athletic Events
 - Time and motion analysis of speed events in team sports 4.5.3. in team sports
- Methodological Approach to Teaching the Technique
 - 4.6.1. Technical Teaching of the Different Phases of the Race
 - 4.6.2. Common Errors and Ways to Correct Them

Educational Plan | 37 tech

4.7. M	eans a	nd Meth	ods for	Speed	Developmen	١t
--------	--------	---------	---------	-------	------------	----

Module 6. Mobility: from Theory to Performance

6.1.	Neuromuscular	System
0.1.	riculorriusculai	Oystell

- 6.1.1. Neurophysiological Principles: Inhibition and Excitability
 - 6.1.1.1. Adaptations of the Nervous System
 - 6.1.1.2. Strategies to Modify Corticospinal Excitability
 - 6.1.1.3. Keys to Neuromuscular Activation
- 6.1.2. Somatosensory Information Systems
 - 6.1.2.1. Information Subsystems

- 6.1.2.2. Types of Reflexes
 - 6.1.2.2.1. Monosynaptic Reflexes
 - 6.1.2.2.2. Polysynaptic Reflexes
 - 6.1.2.2.3. Muscle-Tendinous-Articular Reflexes
- 6.1.2.3. Responses to Dynamic and Static Stretches
- 6.2. Motor Control and Movement
 - 6.2.1. Stabilizing and Mobilising Systems
 - 6.2.1.1. Local System: Stabilizer System
 - 6.2.1.2. Global System: Mobilizing System
 - 6.2.1.3. Respiratory Pattern
 - 6.2.2. Movement Pattern
 - 6.2.2.1. Co-Activation
 - 6.2.2.2. Joint by Joint Theory
 - 6.2.2.3. Primary Motion Complexes
- 6.3. Understanding Mobility
 - 6.3.1. Key Concepts and Beliefs in Mobility
 - 6.3.1.1. Manifestations of Mobility in Sport
 - 6.3.1.2. Neurophysiological and Biomechanical Factors Influencing Mobility Development
 - 6.3.1.3. Impact of Mobility on Strength Development
 - 6.3.2. Objectives of Training Mobility in Sport
 - 6.3.2.1. Mobility in the Training Session
 - 6.3.2.2. Benefits of Mobility Training
 - 6.3.3. Mobility and Stability by Structures
 - 6.3.3.1. Foot-Ankle Complex
 - 6.3.3.2. Knee-Hip Complex
 - 6.3.3.3. Spine-Shoulder Complex
- 6.4. Training Mobility
 - 6.4.1 Fundamental Block
 - 6.4.1.1. Strategies and Tools to Optimize Mobility
 - 6.4.1.2. Specific Pre-Exercise Scheme
 - 6.4.1.3. Specific Post-Exercise Scheme
 - 6.4.2. Mobility and Stability in Basic Movements
 - 6.4.2.1. Squat & Dead Lift
 - 6.4.2.2. Acceleration and Multidirection

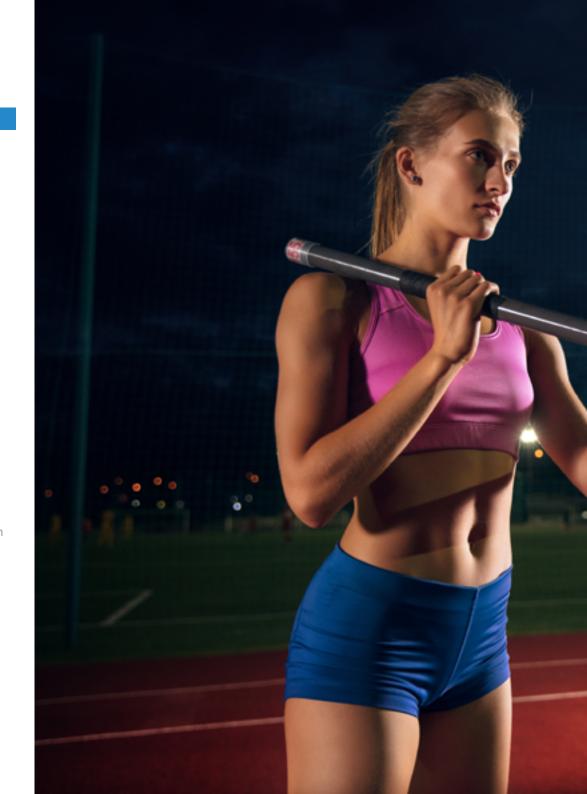

- 6.5. Methods of Recovery
 - 6.5.1. Proposal for Effectiveness Based on Scientific Evidence
- 6.6. Methods for Training Mobility
 - 6.6.1. Tissue-Centered Methods: Passive Tension and Active Tension Stretching
 - 6.6.2. Methods focused on arthro-coinematics: isolated stretching and integrated stretching
 - 6.6.3. Eccentric Training
- 6.7. Mobility Training Programming
 - 6.7.1. Effects of Stretching in the Short and Long Term
 - 6.7.2. Optimal Timing for Applying Stretching
- 6.8. Athlete Assessment and Analysis
 - 6.8.1. Functional and Neuromuscular Assessment
 - 6.8.1.1. Key Concepts in Assessment
 - 6.8.1.2. Evaluation Process
 - 6.8.1.2.1. Analyze the Movement Pattern
 - 6.8.1.2.2. Identify the Test
 - 6.8.1.2.3. Detect the Weak Links
 - 6.8.2. Athlete Assessment Methodology
 - 6.8.2.1. Types of Tests
 - 6.8.2.1.1. Analytical Assessment Test
 - 6.8.2.1.2. General Assessment Test
 - 6.8.2.1.3. Specific-Dynamic Assessment Test
 - 6.8.2.2. Assessment by Structures
 - 6.8.2.2.1. Foot-Ankle Complex
 - 6.8.2.2.2. Knee-Hip Complex
 - 6.8.2.2.3. Spine-Shoulder Complex
- 6.9. Mobility in Injured Athletes
 - 6.9.1. Pathophysiology of Injury: Effects on Mobility
 - 6.9.1.1. Muscle Structure
 - 6.9.1.2. Tendon Structure
 - 6.9.1.3. Ligament Structure
 - 6.9.2. Mobility and Preventiion of Injuries: Practical Case
 - 6.9.2.1. Ruptured Ischialis in the Runner

Module 7. Sports Performance Assessment

7	1	A a a a a a a a a a a
/	- 1	Assessment

- 7.1.1. Definitions: Test, Assessment, Measurement
- 7.1.2. Validity, Reliability
- 7.1.3. Purposes of the Evaluation
- 7.2. Types of Tests
 - 7.2.1. Laboratory Test
 - 7.2.1.1. Strengths and Limitations of Laboratory Tests
 - 7.2.2. Field Tests
 - 7.2.2.1. Strengths and Limitations of Field Tests
 - 7.2.3. Direct Tests
 - 7.2.3.1. Applications and Transfer to Training
 - 7.2.4. Indirect Tests
 - 7.2.4.1. Practical Considerations and Transfer to Training
- 7.3. Assessment of Body Composition
 - 7.3.1. Bioimpedance
 - 7.3.1.1. Considerations in its Application to Field
 - 7.3.1.2. Limitations on the Validity of Its Data
 - 7.3.2. Anthropometry
 - 7.3.2.1. Tools for its Implementation
 - 7.3.2.2. Models of Analysis for Body Composition
 - 7.3.3. Body Mass Index (IMC)
 - 7.3.3.1. Restrictions on the data obtained for interpretation of body composition
- 7.4. Assessing Aerobic Fitness
 - 7.4.1. Vo2max Test on the Treadmill
 - 7.4.1.1. Astrand Test
 - 7.4.1.2. Balke Test
 - 7.4.1.3. ACSM Test
 - 7.4.1.4. Bruce Test
 - 7.4.1.5. Foster Test
 - 7.4.1.6. Pollack Test
 - 7.4.2. Cycloergometer VO2max Test
 - 7.4.2.1. Astrand. Ryhming
 - 7.4.2.2. Fox Test

Educational Plan | 41 tech

7.4.3.	Cycloergometer	Power Test

7.4.3.1. Wingate Test

7.4.4. Vo2max Test in he Field

7.4.4.1. Leger Test

7.4.4.2. Montreal University Test

7.4.4.3. Mile Test

7.4.4.4. 12-Minute Test

7.4.4.5. 2.4Km Test

7.4.5. Field Test to Establish Training Areas

7.4.5.1. 30-15 IFT Test

7.4.6. UNca Test

7.4.7. Yo-Yo Test

7.4.7.1. Yo-Yo Endurance YYET Level 1 and 2

7.4.7.2. Yo-Yo Intermittent Endurance YYEIT Level 1 and 2

7.4.7.3. Yo-Yo Intermittent Recovery YYERT Level 1 and 2

Neuromuscular Fitness Evaluation

7.5.1. Submaximal Repetition Test

7.5.1.1. Practical Applications for its Assessment

7.5.1.2. Validated Estimation Formulas for the Different Training Exercises

7.5.2. 1 RM Test

7.5.2.1. Protocol for its Performance

7.5.2.2. Limitations of 1 RM Assessment

7.5.3. Horizontal Jump Test

7.5.3.1. Assessment Protocols

7.5.4. Speed Test (5m,10m,15m, Etc.)

7.5.4.1. Considerations on the Data Obtained in Time/Distance Assessments

7.5.5. Maximum/Submaximum Incremental Progressive Tests

7.5.5.1. Validated Protocols

7.5.5.2. Practical Applications

7.5.6. Vertical Jump Test

7.5.6.1. SJ Jump

7.5.6.2. CMJ Jump

7.5.6.3. ABK Jump

7.5.6.4. DJ Test

7.5.6.5. Continuous Jump Test

	7.6.4.1. GPS Types, Characteristics, Strengths and Limitations		7.8.1.	General Concepts of Fatigue and Recovery
	7.6.4.2. Metrics Established to Interpret the External Load		7.8.2.	Assessments
7.6.5.	Accelerometers			7.8.2.1. Laboratory Objectives: CK, Urea, Cortisol, Etc
	7.6.5.1. Types of Accelerometers and Characteristics			7.8.2.2. Field Objectives: CMJ, Isometric Tests, etc
	7.6.5.2. Practical Applications of Data Obtained From an Accelerometer			7.8.2.3. Subjective: Wellness Scales, TQR, etc
7.6.6.	Position Transducers		7.8.3.	Recovery Strategies: Cold-Water Immersion, Nutritional Strategies, Self-Massage, Sleep
	7.6.6.1. Types of Transducers for Vertical and Horizontal Movements	7.9.	Consid	erations for Practical Applications
	7.6.6.2. Variables Measured and Estimated by of a Position Transducer	7.9.		Vertical Jump Test Practical Applications
	7.6.6.3. Data Obtained from a Position Transducer and its Applications to Training			
	Programming		7.9.2.	Maximum/Submaximum Incremental Progressive Test Practical Applications
7.6.7.	Strength Platforms		7.9.3.	Vertical Strength-Speed Profile. Practical Applications
	7.6.7.1. Types and Characteristics.of Strength Platforms			
	7.6.7.2. Variables Measured and Estimated by Means of a Strength Platform			

Module 8. Planning Applied to High Performance in Sports

- 8.1. Basic Fundamentals
 - 8.1.1. Adaptation Criteria
 - 8.1.1.1. General Adaptation Syndrome
 - 8.1.1.2. Current Performance Capability, Training Requirement
 - 8.1.2. Fatigue, Performance, Conditioning as Tools
 - 8.1.3. Dose-Response Concept and its Application
- 8.2. Basic Concepts and Applications
 - 8.2.1. Concept and Application of the Plan
 - 8.2.2. Concept and Application of Peridization
 - 8.2.3. Concept and Application of Programming
 - 8.2.4. Concept and Application of Load Control
- 8.3. Conceptual Development of Planning and its Different Models
 - 8.3.1. First Historical Planning Records
 - 8.3.2. First Proposals, Analyzing the Bases
 - 8.3.3 Classic Models
 - 8.3.3.1. Traditional
 - 8.3.3.2. Pendulum
 - 8.3.3.3. High Loads
- 8.4. Models Focused on Individuality and/or Load Concentration
 - 841 Blocks
 - 8.4.2. Integrated Macrocycle
 - 8.4.3. Integrated Model
 - 8.4.4. ATR
 - 8.4.5. Keeping in Shape
 - 8.4.6. By Objectives
 - 8.4.7. Structural Bells
 - 8.4.8. Self-Regulation (APRE)
- 8.5. Models Focused on Specificity and/or Movement Capacity
 - 8.5.1. Cognitive (or Structured Microcycle)
 - 8.5.2. Tactical Periodization
 - 8.5.3. Conditional Development by Movement Capacity

- 8.6. Criteria for Correct Programming and Periodization
 - 8.6.1. Criteria for Programming and Periodization in Strength Training
 - 8.6.2. Criteria for Programming and Periodization in Endurance Training
 - 8.6.3. Criteria for Programming and Periodization in Speed Training
 - 8.6.4. "Interference" Criteria in Scheduling and Periodization in Concurrent Training
- 8.7. Planning Through Load Control With a GNSS Device (GPS)
 - 8.7.1. Basis of Session Saving for Appropriate Control
 - 8.7.1.1. Calculation of the *Average* Group Session for a Correct Load Analysis
 - 8.7.1.2. Common Errors in Saving and Their Impact on Plannning
 - 8.7.2. Relativization of the Load, a Function of Competence
 - 3.7.3. Load Control by Volume or Density, Range and Limitations
- 8.8. Integrating Thematic Unit 1 (Practical Application)
 - 8.8.1. Construction of a Real Model of Short-Term Planning
 - 8.8.1.1. Selecting and Applying the Periodization Model
 - 8.8.1.2. Designing the Corresponding Planning
- 8.9. Integrating Thematic Unit 2 (Practical Application)
 - 8.9.1. Producing a Pluriannual Plannification
 - 8.9.2. Producing an Annual Plannification

Module 9. Biomechanics Applied to High Performance in Sports

- 9.1. Introduction to Biomechanics
 - 9.1.1. Biomechanics, Concept, Introduction and Purpose of Biomechanics
 - 9.1.1.1. Its Connection to Functional Anatomy
 - 9.1.2. Biomechanics and Performance
 - 9.1.2.1. Its Application to Physical Education and Sport
 - 9.1.2.2. Parts of Biomechanics, Generalities
 - 9.1.2.3. Measuring Tools
 - 9.1.3. Kinematics: Basic Concepts and Practical Applications
- 9.2. Movement in One Dimension

tech 44 | Educational Plan

tech 50 | Internship

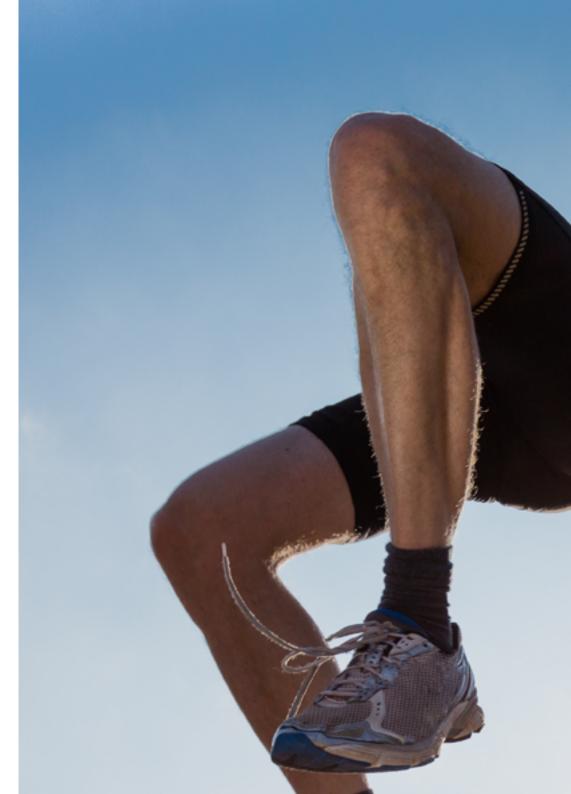

The Internship Program consists of a 3-week internship in a company with highly qualified experts in training with teams and athletes of the highest competitive level. This practical phase will take place once the students pass to the theoretical phase of this Hybrid Master's Degree, and the student must know and master to perfection the different techniques, methods, technologies and tools used for physical exercise, before applying all this knowledge in athletes whose professional expectations are very high.

Students will be in this internship from Monday to Friday, in 8-hour consecutive days with professionals in the sector who will teach them the latest developments in training, statistics and evaluation of the elite athlete. The nutritional field, which has a specific module in this program, will be equally important in this phase of the Hybrid Master's Degree, since nutrition is key to physical exercise and the recovery of the athlete after a competition or injury.

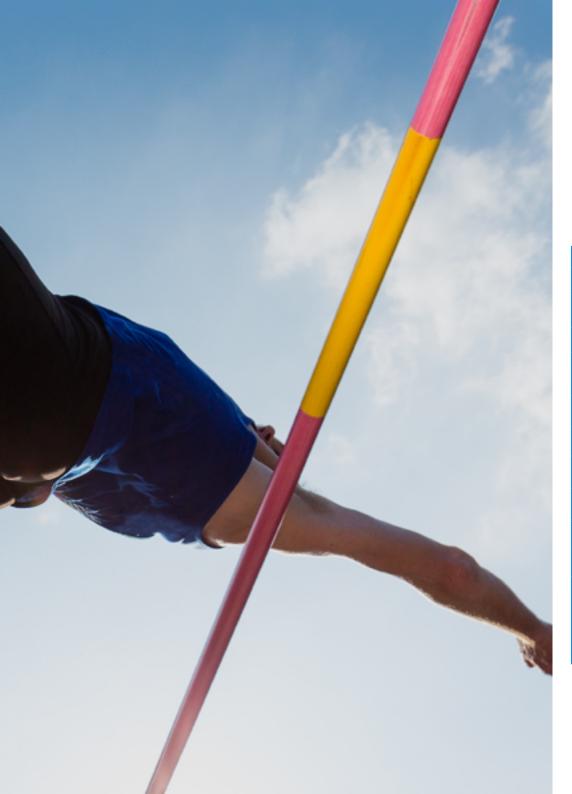

It is undoubtedly an opportunity to learn by working with true masters of the sport discipline and with whom to put into practice the concept of intensity and density loading, develop strength and speed training methods, plan aerobic exercises around endurance or build annual, multi-year or short-term plans.

The practical part will be carried out with the active participation of the student performing the activities and procedures of each area of competence (learning to learn and learning to do), with the accompaniment and guidance of teachers and other training partners that facilitate teamwork and multidisciplinary integration as transversal competences for the practice of sports performance (learning to be and learning to relate).

The procedures described below will be the basis of the practical part of the training, and their implementation will be subject to the center's own availability and workload, the proposed activities being the following:

Module	Practical Activity
Exercise Physiology and Physical Activity	Apply knowledge of exercise physiology in sports practice
	Transfer the knowledge of fatigue, energy systems and extreme physiological conditions to the practical setting
Statistics applied to performance and research	Master the use of sports statistics in the field of training
	Perform the analysis of different descriptive statistics
	Practicing data collection and handling the main analytical tests in the field of sports
Training strength training, from theory to practice	Apply the practice of the concept of intensity and density loading
	Develop strength training methods
Training endurance training from theory to practice	Plan aerobic exercises around endurance
	Develop physiological adaptations of endurance exercise for children and adolescents
Evaluation of sports performance	Perform sports assessments based on different types of test
	Learn about the practical use of mobile sports applications in high-performance environments
Planning applied to High Performance Performance Sports	Create sports schedules adapted to high performance environments
	Apply the most important criteria and fundamentals in the development of sport planning
	Develop annual, multiyear or short-term plans

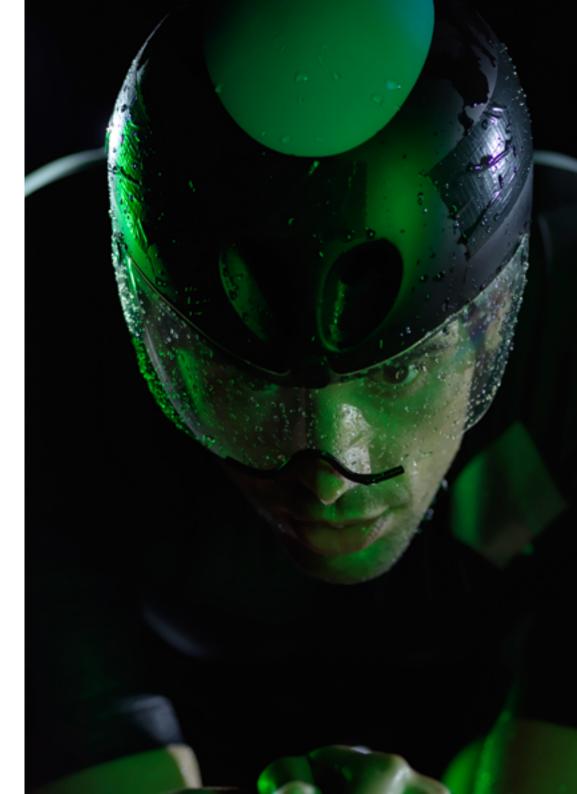

Civil Liability Insurance

This institution's main concern is to guarantee the safety of the trainees and other collaborating agents involved in the internship process at the company. Among the measures dedicated to achieve this is the response to any incident that may occur during the entire teaching-learning process.

To this end, this entity commits to purchasing a civil liability insurance policy to cover any eventuality that may arise during the course of the internship at the center.

This liability policy for interns will have broad coverage and will be taken out prior to the start of the practical training period. That way professionals will not have to worry in case of having to face an unexpected situation and will be covered until the end of the internship program at the center.

General Conditions of the Internship Program

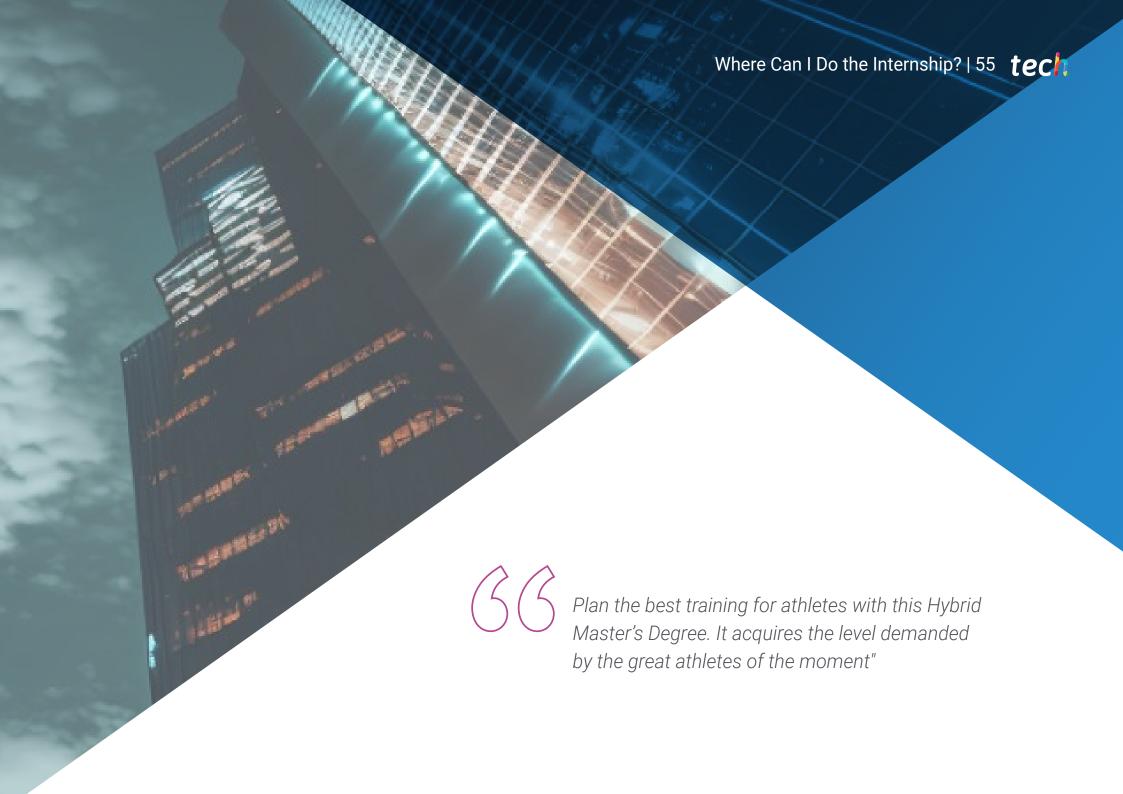

The general terms and conditions of the internship program agreement shall be as follows:

- 1. TUTOR: During the Hybrid Master's Degree, students will be assigned with two tutors who will accompany them throughout the process, answering any doubts and questions that may arise. On the one hand, there will be a professional tutor belonging to the internship center who will have the purpose of guiding and supporting the student at all times. On the other hand, they will also be assigned with an academic tutor whose mission will be to coordinate and help the students during the whole process, solving doubts and facilitating everything they may need. In this way, the student will be accompanied and will be able to discuss any doubts that may arise, both clinical and academic.
- **2. DURATION:** The internship program will have a duration of three continuous weeks, in 8-hour days, 5 days a week. The days of attendance and the schedule will be the responsibility of the center and the professional will be informed well in advance so that they can make the appropriate arrangements.
- 3. ABSENCE: If the students does not show up on the start date of the Hybrid Master's Degree, they will lose the right to it, without the possibility of reimbursement or change of dates. Absence for more than two days from the internship, without justification or a medical reason, will result in the professional's withdrawal from the internship, therefore, automatic termination of the internship. Any problems that may arise during the course of the internship must be urgently reported to the academic tutor.

- **4. CERTIFICATION:** Professionals who pass the Hybrid Master's Degree will receive a certificate accrediting their stay at the center.
- **5. EMPLOYMENT RELATIONSHIP:** the Hybrid Master's Degree shall not constitute an employment relationship of any kind.
- **6. PRIOR EDUCATION:** Some centers may require a certificate of prior education for the Hybrid Master's Degree. In these cases, it will be necessary to submit it to the TECH internship department so that the assignment of the chosen center can be confirmed.
- 7. DOES NOT INCLUDE: The Hybrid Master's Degree will not include any element not described in the present conditions. Therefore, it does not include accommodation, transportation to the city where the internship takes place, visas or any other items not listed

However, students may consult with their academic tutor for any questions or recommendations in this regard. The academic tutor will provide the student with all the necessary information to facilitate the procedures in any case.

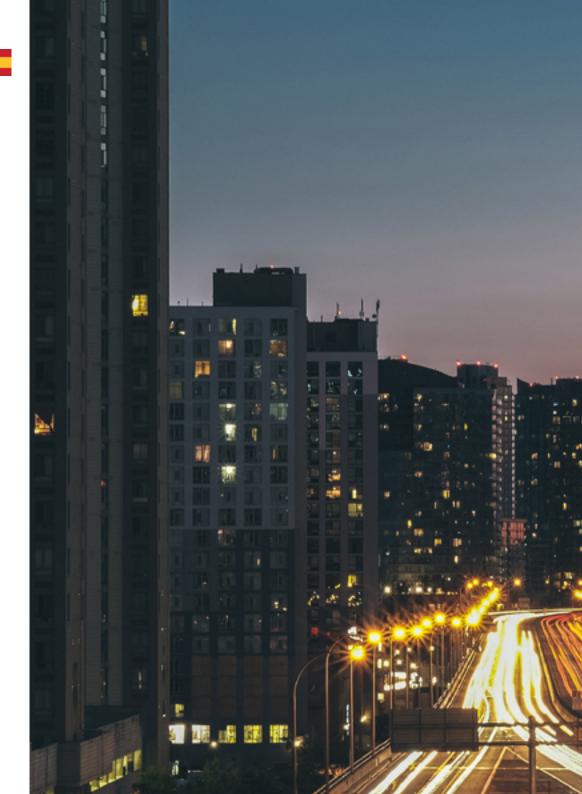

tech 56 | Where Can | Do the Internship?

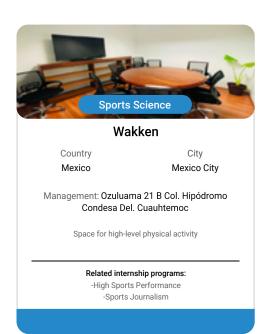

The student will be able to complete the practical part of this Hybrid Master's Degree at the following centers:

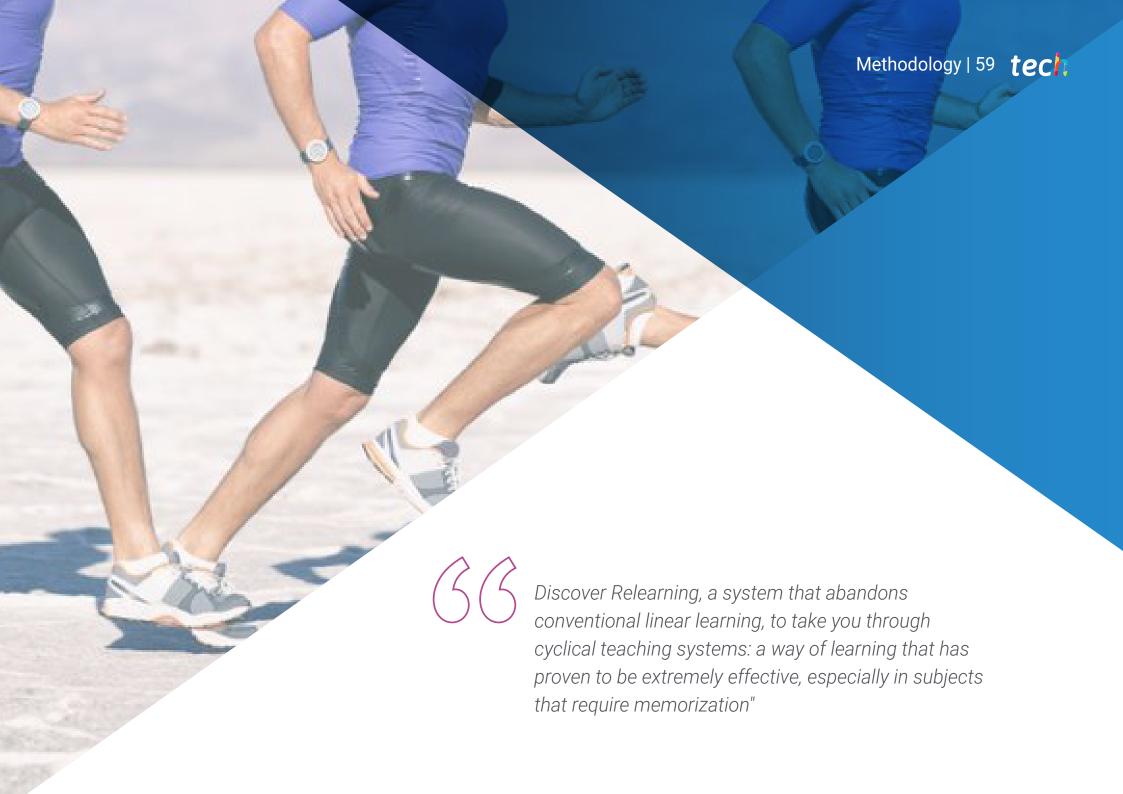

Where Can I Do the Internship? | 57 tech

Delve into the most relevant theory in this field, subsequently applying it in a real work environment"

tech 60 | Method

Case Study to contextualize all content

Our program offers a revolutionary approach to developing skills and knowledge. Our goal is to strengthen skills in a changing, competitive, and highly demanding environment.

At TECH, you will experience a learning methodology that is shaking the foundations of traditional universities around the world"

You will have access to a learning system based on repetition, with natural and progressive teaching throughout the entire syllabus.

The student will learn to solve complex situations in real business environments through collaborative activities and real cases.

A learning method that is different and innovative

This TECH program is an intensive educational program, created from scratch, which presents the most demanding challenges and decisions in this field, both nationally and internationally. This methodology promotes personal and professional growth, representing a significant step towards success. The case method, a technique that lays the foundation for this content, ensures that the most current economic, social and professional reality is taken into account.

Our program prepares you to face new challenges in uncertain environments and achieve success in your career"

The case method is the most widely used learning system in the best faculties in the world. The case method was developed in 1912 so that law students would not only learn the law based on theoretical content. It consisted of presenting students with real-life, complex situations for them to make informed decisions and value judgments on how to resolve them. In 1924, Harvard adopted it as a standard teaching method.

What should a professional do in a given situation? This is the question we face in the case method, an action-oriented learning method. Throughout the program, the studies will be presented with multiple real cases. They will have to combine all their knowledge and research, and argue and defend their ideas and decisions.

Relearning Methodology

TECH effectively combines the Case Study methodology with a 100% online learning system based on repetition, which combines 8 different teaching elements in each lesson.

We enhance the Case Study with the best 100% online teaching method: Relearning.

In 2019, we obtained the best learning results of all online universities in the world.

At TECH, you will learn using a cutting-edge methodology designed to train the executives of the future. This method, at the forefront of international teaching, is called Relearning.

Our university is the only one in the world authorized to employ this successful method. In 2019, we managed to improve our students' overall satisfaction levels (teaching quality, quality of materials, course structure, objectives...) based on the best online university indicators.

Method | 63 tech

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically. With this methodology, we have trained more than 650,000 university graduates with unprecedented success in fields as diverse as biochemistry, genetics, surgery, international law, management skills, sports science, philosophy, law, engineering, journalism, history, markets, and financial instruments. All this in a highly demanding environment, where the students have a strong socio-economic profile and an average age of 43.5 years.

Relearning will allow you to learn with less effort and better performance, involving you more in your training, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation for success.

From the latest scientific evidence in the field of neuroscience, not only do we know how to organize information, ideas, images and memories, but we know that the place and context where we have learned something is fundamental for us to be able to remember it and store it in the hippocampus, to retain it in our long-term memory.

In this way, and in what is called neurocognitive context-dependent e-learning, the different elements in our program are connected to the context where the individual carries out their professional activity.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Classes

There is scientific evidence suggesting that observing third-party experts can be useful.

Learning from an Expert strengthens knowledge and memory, and generates confidence in future difficult decisions.

Practising Skills and Abilities

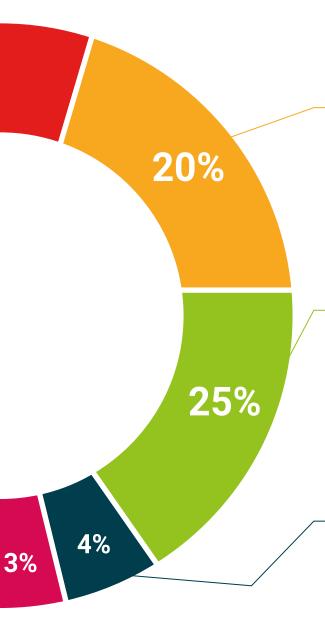

They will carry out activities to develop specific competencies and skills in each thematic area. Exercises and activities to acquire and develop the skills and abilities that a specialist needs to develop in the context of the globalization that we are experiencing.

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

Case Studies

Students will complete a selection of the best case studies chosen specifically for this situation. Cases that are presented, analyzed, and supervised by the best specialists in the world.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Testing & Retesting

 \bigcirc

We periodically evaluate and re-evaluate students' knowledge throughout the program, through assessment and self-assessment activities and exercises, so that they can see how they are achieving their goals.

tech 68 | Certificate

This program will allow you to obtain your **Hybrid Master's Degree diploma in High Performance in Sports** endorsed by **TECH Global University**, the world's largest online university.

TECH Global University is an official European University publicly recognized by the Government of Andorra (*official bulletin*). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

This **TECH Global University** title is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.

Title: Hybrid Master's Degree in High Performance in Sports

Course Modality: Hybrid (Online + Clinical Internship)

Duration: 12 months

Certificate: TECH Global University

Recognition: 60 + 5 ECTS Credits

^{*}Apostille Convention. In the event that the student wishes to have their paper diploma issued with an apostille, TECH Global University will make the necessary arrangements to obtain it, at an additional cost.
